### Committee for Programme and Coordination

Forty-fifth session

6 June-1 July 2005

Item 4 (c) of the provisional agenda\*

**Programme questions: evaluation**

### **Evaluation of linkages between headquarters and field activities: a review of best practices for poverty eradication in the framework of the United Nations Millennium Declaration**

#### **Note by the Secretary-General**

In conformity with General Assembly resolutions 48/218 B of 29 July 1994, 54/244 of 23 December 1999 and 59/272 of 23 December 2004, the Secretary-General has the honour to transmit herewith the report of the Office of Internal Oversight Services on the evaluation of the theme "Linkages between headquarters and field activities: a review of best practices for poverty eradication in the framework of the United Nations Millennium Declaration".

---

\* E/AC.51/2005/1.

## **Report of the Office of Internal Oversight Services on the evaluation of linkages between headquarters and field activities: a review of best practices for poverty eradication in the framework of the United Nations Millennium Declaration**

### *Summary*

The present report fulfils the request of the Committee for Programme and Coordination that the Office of Internal Oversight Services (OIOS) conduct a pilot thematic evaluation of “Linkages between headquarters and field activities: a review of best practices for poverty eradication within the framework of the United Nations Millennium Declaration”. The report assesses the effectiveness of such linkages and identifies the best practices to be promoted.

The report concludes that linkages between headquarters and the field are crucial to a comprehensive, multisectoral and coordinated approach to poverty eradication. Within the headquarters/field transmission line, a highly complex system of linkages connects and coordinates the poverty eradication activities of headquarters, regional and field offices, with linkages flowing in multiple directions and often dependent on personal connections and ad hoc agreements. This complexity is not conducive to the consistent and systematic transmission of knowledge, guidance and experience.

While the conventional headquarters/field paradigm is one of mutually reinforcing normative, analytical and operational roles and functions, in practice it is characterized by a wide diversity of roles and activities, unfulfilled complementarities, shifting boundaries and a limited role for non-resident agencies. A combination of strong institutional linkages, knowledge-sharing in respect of activities of mutual interest, good working relations and mutual trust is required to utilize fully the complementarities between headquarters and field offices. Furthermore, better integration of regional entities, in particular the regional commissions, into the headquarters/field transmission line would strengthen linkages. Both inter-agency and intra-agency coordination at the headquarters level are required to ensure that a common agenda and strategy for poverty eradication are submitted to the field, while the capacity of the resident coordinator system must be strengthened in regard to coordination not only at the country level but also with headquarters entities. Linkages must also be supported by management practices, work tools and communication strategies which facilitate interaction, collaboration and joint activities.

Best practice linkages facilitate coordination, collaboration and synergy among headquarters, regional and field offices and tap into the collective capacity of the United Nations system to foster the success of poverty eradication activities. Such linkages include the effective use of knowledge management networks, inter-agency partnerships built around thematic dimensions of poverty, informative websites and other electronic forums, and a strong resident coordinator system and country team practices that promote effective coordination with headquarters.

OIOS makes nine recommendations to the Secretary-General, the United Nations System Chief Executives Board for Coordination, the United Nations Development Group, the Department of Economic and Social Affairs and the regional commissions. These recommendations include enhancing collaboration among inter-agency coordinating bodies, introducing a more strategic approach to system-wide knowledge management networks, increasing the exchange of information between country teams and non-resident agencies and regional commissions, strengthening management practices in relation to administration, training, performance appraisals and staff secondments, and further strengthening of the resident coordinator system.

## I. Introduction

1. At its forty-fourth session, the Committee on Programme and Coordination requested the Office of Internal Oversight Services (OIOS) to conduct a pilot thematic evaluation of “Linkages between headquarters and field activities: a review of best practices for poverty eradication within the framework of the United Nations Millennium Declaration”.<sup>1</sup> Its objective was to assess the effectiveness of linkages between headquarters and the field and to identify best practices to be promoted. The evaluation uses poverty eradication as a case study for discussing linkages but does not provide an independent assessment of the poverty eradication activities. The evaluation was conducted within the context of United Nations reform aimed at greater harmonization in the United Nations system. The report has been reviewed by the relevant departments and offices; their comments are included in italics, where appropriate.

2. Within the United Nations Organization, the traditional headquarters/field paradigm makes a distinction between norm setting, policy formulation and analytical activities at headquarters and operational and assistance activities carried out in the field. Regional and subregional offices are mid-level units in the paradigm. Not all United Nations entities have a field presence; for work in the area of poverty, the United Nations Secretariat has a more limited presence than the rest of the United Nations system. Given this variability, assessing how the various entities coordinate efforts and collaborate is especially important. For the purposes of the evaluation, linkages are considered to be the policies, guidelines, mechanisms and tools that connect the activities undertaken at the headquarters, regional and field levels. Effective linkages are intrinsic components not only of reaching poverty eradication goals, but are important in relation to other United Nations activities.

3. Linkages between headquarters and the field cannot be fully discussed without acknowledging the part played by Member States in bringing different expectations and perspectives to the role of the United Nations in poverty eradication. In intergovernmental bodies, Member States shape global agendas and priorities, while at the national level, they have principal responsibility for coordinating external assistance, including that provided by the United Nations. Given the primacy of national Governments in pursuing development activities, the role played by the United Nations at the country level is ultimately shaped by national needs and priorities.

## II. Background

4. Poverty eradication is complex and multidisciplinary. There is no single agreed definition of poverty: the simplest refers to lack of the minimum resources needed to sustain an acceptable standard of living. The latter is relative, dependent on the culture, economy and polity to which it pertains. This simple definition does not spell out vital aspects of poverty eradication, such as access to education, health, water and sanitation and work. In addition, poverty has significant dimensions, such as gender, age and ethnicity. In order to quantify its extent and distribution, statistics are needed.

---

<sup>1</sup> *Official Records of the General Assembly, Fifty-ninth Session, Supplement No. 16 (A/59/16)*, para. 399.

5. It is generally recognized that poverty eradication is tackled both through overall economic growth and through the more equitable distribution of that growth. Hence, economic management and governance are vital to the task. In resolving to halve the poverty rate by 2015, the General Assembly, at the Millennium Summit, laid down a major challenge to the world and to the United Nations. In the final analysis, the challenge must be met at the country level. The task of the United Nations is to bring to bear its experience, expertise and resources in providing support to countries in reaching their development goals.

6. By resolution 50/107 of 20 December 1995, the General Assembly proclaimed the first United Nations Decade for the Eradication of Poverty (1997-2006). Subsequently, by resolution 51/178 of 16 December 1996, it recommended that, within the context of overall action for the eradication of poverty, special attention be given to the multidimensional nature of poverty and that the causes of poverty be addressed in the context of sectoral strategies, such as those on environment, food security, population, migration, health, shelter, human resources development, fresh water, rural development and productive employment. The Assembly, by resolution 55/2 of 8 September 2000, adopted the United Nations Millennium Declaration, which sets out eight specific, time-bound Millennium Development Goals which are to be met by 2015. These Goals include that of eradicating poverty and hunger, a goal measured by two targets: (a) halving the proportion of the world's people whose income is less than one dollar a day; and (b) halving the proportion of people who suffer from hunger.

7. Linkages among poverty eradication activities must be understood within the context of the reform measures laid out by the Secretary-General in 1997 and 2002, which call for greater coherence within the United Nations development system, improved coordination and further clarification of institutional roles and responsibilities. The table below identifies three inter-agency coordinating bodies relevant to poverty eradication,<sup>2</sup> of which the Chief Executives Board is the only system-wide mechanism.

---

<sup>2</sup> Other inter-agency bodies, such as the Executive Committee for Humanitarian Affairs, are also relevant.

	<i>United Nations System Chief Executives Board for Coordination</i>	<i>United Nations Development Group</i>	<i>Executive Committee for Economic and Social Affairs</i>
<b>Established</b>	2001	1997	1997
<b>Purpose</b>	To provide a forum for bringing together executive heads of all organizations with the aim of increasing coordination and cooperation throughout the United Nations system	To improve the impact, effectiveness and efficiency of United Nations operations at the country level in pursuit of the Millennium Development Goals and national needs and priorities, through increased coordination and collaboration among United Nations development organizations and agencies within the framework of the resident coordinator system	To act as an instrument of policy development, decision-making and management on economic and social issues
<b>Membership</b>	28 entities	25 entities and 5 observers	17 entities
<b>Chair</b>	Secretary-General	Administrator of the United Nations Development Programme	Under-Secretary-General for Economic and Social Affairs
<b>Secretariat</b>	Secretariat of the Board	Office of the United Nations Development Group	Department of Economic and Social Affairs

8. The post of resident coordinator was established in 1981 to provide coherence and coordination at the country level among United Nations operational activities. The resident coordinator system was established in 1995 to encompass all organizations of the United Nations development system. Resident coordinators are designated representatives of the Secretary-General and lead country teams in more than 130 nations. Since 1998, country team activities are increasingly coordinated through the common country assessment and United Nations Development Assistance Framework (UNDAF) processes. These processes establish United Nations goals and priorities, in agreement with Governments, and are based on national strategies and plans, including poverty reduction strategy papers. The office of the resident coordinator is intended to be the main conduit through which headquarters activities are linked with the field.

9. The 2004 report of the Secretary-General on the triennial comprehensive policy review of operational activities for development of the United Nations system (A/59/85-E/2004/68) assesses the capacity of the United Nations development system to assist developing countries in poverty eradication, economic growth and sustainable development. Having considered the report, the General Assembly, by its resolution 59/250 of 22 December 2004, stressed the need to

continue strengthening cooperation and collaboration and called for enhancements in linkages among headquarters, regional and country-level activities.

### III. Methodology

10. The following seven methods were used for the evaluation:<sup>3</sup> (a) an analysis of 2004/2005 programme data in the Integrated Monitoring and Documentation Information System; (b) a survey of a non-random sample of 44 subprogrammes<sup>4</sup> engaged in poverty work at the headquarters level; (c) a survey of a random sample of 50 resident coordinators;<sup>5</sup> (d) interviews with headquarters and regional staff<sup>6</sup> engaged in poverty work; (e) case studies based on field missions, which included consultations with country team members, national Governments and civil society groups; (f) a desk review of pertinent reports and other documents; and (g) an electronic discussion on the topic of linkages between headquarters and the field.<sup>7</sup> The findings of the present report are based on evidence obtained through an analysis of these quantitative and qualitative data sources. The criteria used to identify effective linkages include: systematic sharing of knowledge and information; mechanisms for strong communication and ongoing feedback; adequate work tools and management practices; and consistent policies and mandates.

11. The evaluation methodology had several limitations. First, recognizing the complexity involved in defining poverty, the evaluation does not attempt to engage in that debate. Further, given that the substantive work of nearly all United Nations entities has some relevance to poverty eradication, it was necessary to narrow the assessment to those working most directly on poverty. Lastly, the evaluation does not purport to be a comprehensive appraisal of the United Nations development system.

12. The scope of the evaluation is confined largely but not exclusively to linkages between the Secretariat and the field. However, given the breadth and nature of the evaluation topic, it was necessary to examine these linkages within the wider

<sup>3</sup> With the assistance of development and management experts.

<sup>4</sup> The subprogrammes represent the Department of Economic and Social Affairs, the Economic Commission for Africa, the Economic Commission for Europe, the Economic Commission for Latin America and the Caribbean, the Economic and Social Commission for Asia and the Pacific, the Economic and Social Commission for Western Asia, the Office of the United Nations High Commissioner for Human Rights, the Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States, the United Nations Conference on Trade and Development, the United Nations Environment Programme, the United Nations Human Settlements Programme (UN-Habitat), the United Nations Industrial Development Organization and the United Nations Relief and Works Agency for Palestine Refugees in the Near East. Of the 44 subprogrammes, 30 responded. In the present report, respondents to the survey are referred to as programme managers. The survey was conducted during the period from September to December 2004.

<sup>5</sup> Of the 50 resident coordinators, 27 responded. The survey was conducted during the period from October to December 2004.

<sup>6</sup> Staff of the secretariat of the Chief Executives Board for Coordination, Department of Economic and Social Affairs, Department of Public Information, Economic Commission for Africa, the Economic Commission for Latin America and the Caribbean, Millennium Project, Office of the United Nations Development Group, United Nations Development Programme, United Nations Population Fund and United Nations Children's Fund.

<sup>7</sup> The discussion occurred on the Millennium Development Goals Network.

context of the United Nations system. At the headquarters level, the evaluation focuses on the Secretariat entities which appear in the biennial programme budget and to a lesser extent on funds and programmes.<sup>8</sup> At the field level, it focuses on country teams.

## **IV. Evaluation findings**

### **A. The complexity of current linkage structures is not conducive to effective and efficient collaboration between headquarters and the field in eradicating poverty**

#### **Headquarters/field transmission line**

13. Effective linkages between headquarters and the field are crucial to a comprehensive, multisectoral and coordinated approach to poverty eradication. Given the multifaceted and multidimensional nature of poverty, virtually every entity of the United Nations system contributes to its eradication. Each entity responds, at its headquarters, with expertise and strategies designed to tackle the poverty dimension in which it works. These are then disseminated to the field. Ineffective linkages between headquarters and the field may have three undesirable consequences: (a) promotion of activities of low relevance and priority to the country concerned; (b) unnecessary competition; and (c) duplication of effort. Some duplication, if complementary and not contradictory, may be necessary. In India, unnecessary duplication has been addressed with the establishment of a knowledge management exercise that gives focus to poverty eradication through the country-wide community of practice on poverty alleviation. This involves United Nations agencies, the national Government and civil society and, according to one country team member, it ensures that individual mandates lead to activities which are harmonious, coherent and have demonstrable sustainable development impact.

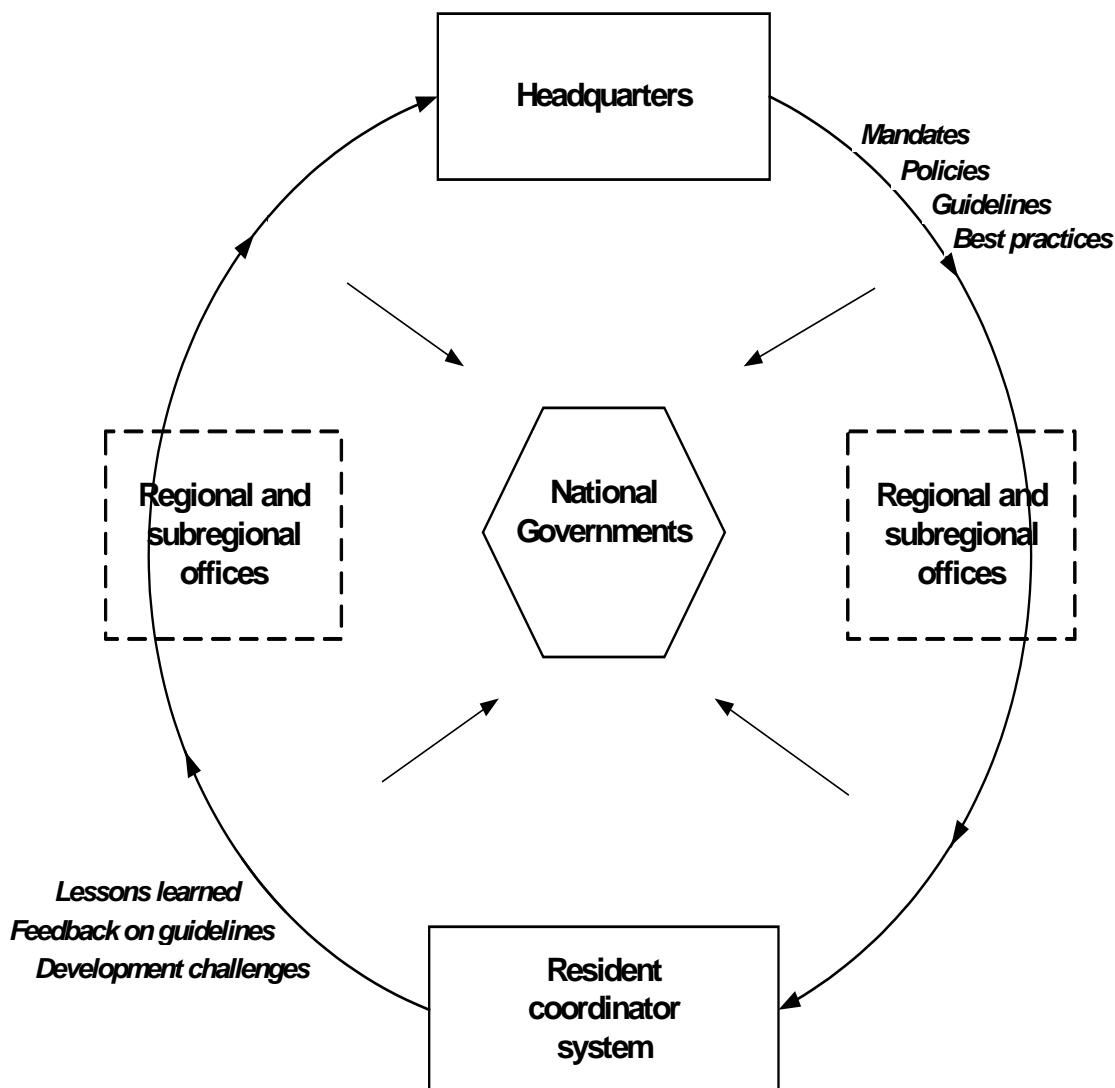

14. A headquarters/field transmission line links the activities carried out at one level with those at the other. Figure 1 illustrates how this transmission line ideally works to support national Governments.

---

<sup>8</sup> "Headquarters" refers to programme headquarters offices located in New York, Geneva, Vienna and Nairobi.

Figure 1  
Headquarters/field transmission line

In this transmission line, headquarters ensures that mandates are known and understood at the country level; provides policy guidelines; collects, analyses and disseminates experience and best practices; and liaises with other headquarters entities for a coordinated and cohesive United Nations response. Country-level activities focus essentially on policy dialogue, with advice provided to Governments and civil society, on preparing and implementing United Nations cooperative operational activities, and on providing feedback to better inform future efforts. The transmission line must also incorporate, where relevant, the contributions of agencies that have no field presence. Headquarters programme managers state that

inadequate coordination with country offices is the biggest challenge that they face in their poverty eradication work.

15. OIOS notes that statistics is one poverty dimension in which the transmission line has worked well. Promulgating statistics on poverty measurements are commonly seen as important for eradicating poverty. It is generally agreed that the headquarters role is one of coordinating policy and developing methodologies, instruments and databases. In turn, these are transmitted to the field and integrated into operational activities and national Government practice. An assessment of their relevance and usefulness must also be fed back to headquarters. Noteworthy in this context is the global release in June 2004 of DevInfo, a database for monitoring progress made in achieving the Millennium Development Goals, originally developed by the United Nations Children's Fund (UNICEF) and used at the headquarters, regional and country levels.

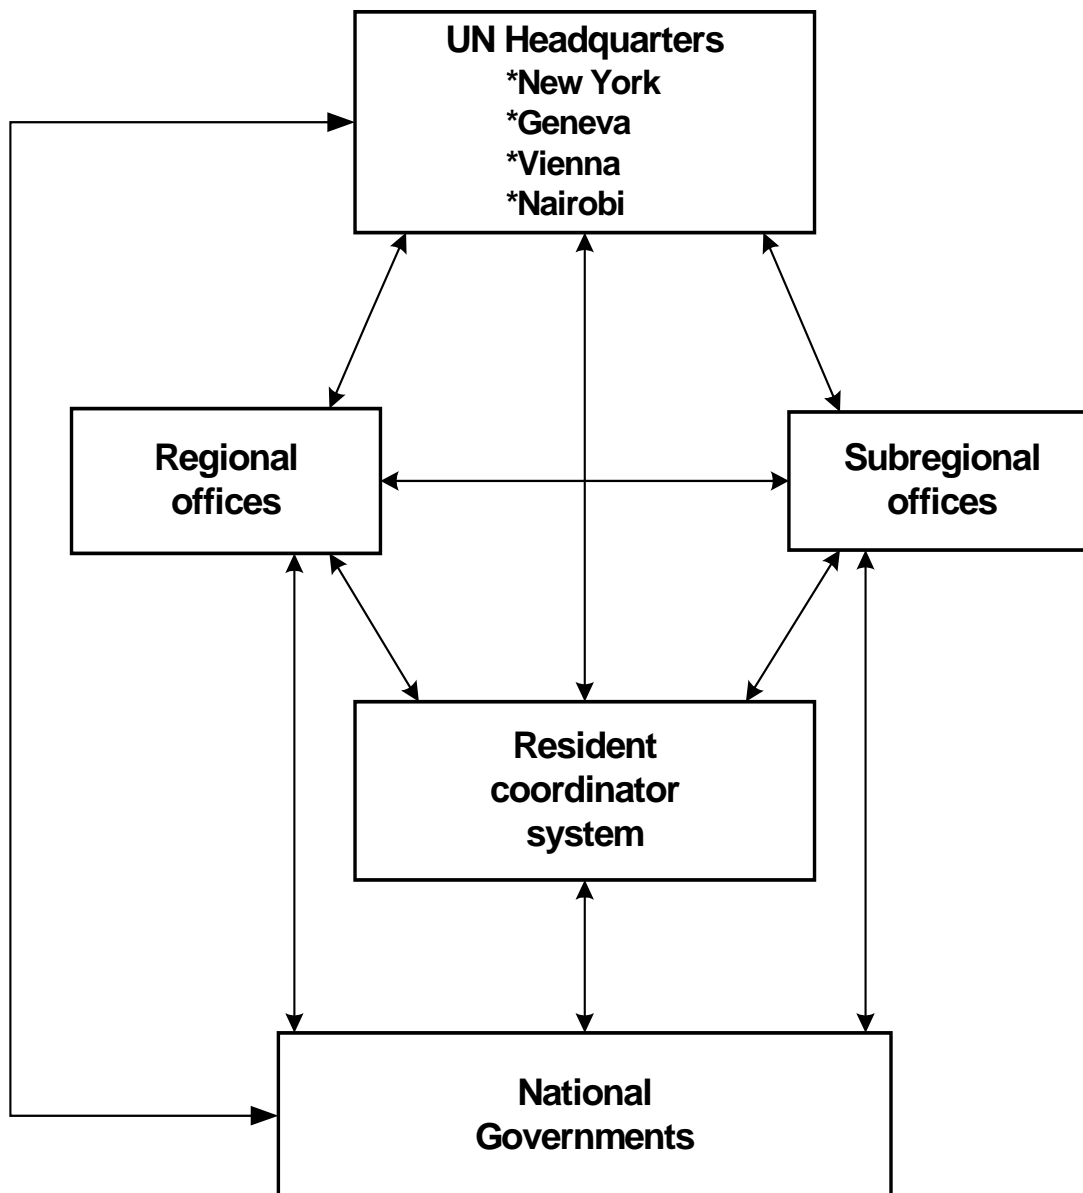

16. The need to align a common vision, strategy and action plan for combating poverty necessitates that headquarters and field offices be strongly linked. OIOS noted concurrent projects on several poverty dimensions, such as governance and gender, being separately undertaken at the headquarters, regional and field levels, with little or no coordination among them. Effective linkages in these instances would ensure a more harmonized and cohesive approach to poverty eradication goals.

#### **Linkage structures**

17. Given the complexity of poverty and the absence of an agreed definition, a highly complex system of linkages exists to connect and coordinate the poverty eradication activities at headquarters, regional and field offices. Lack of coherence and coordination at the intergovernmental level and inconsistent messages among the governing bodies of the various United Nations entities contribute to the complexity. While OIOS recognizes that complexity is not inherently unfavourable and to some extent must be expected, it concludes that, given the multidimensional and multifaceted nature of poverty, such complexity does not consistently and systematically allow for the effective and efficient transmission of knowledge, guidance and experience. Programme managers and resident coordinators identify many entities with which they regularly link in connection with poverty activities. Based on an analysis of their survey responses and a review of common projects, these linkages are often dependent on personal connections and ad hoc agreements; systemic mechanisms for linking activities are more limited. However well personal linkages may work, they are inadequate as the sole means of working together, since they hinge upon personalities and are not durable.

18. Current linkages in relation to poverty eradication lack a consistent and well-organized structure. Figure 2 shows the multidirectional structures of current linkages.

Figure 2  
Current linkage structures

In some instances, linkages flow directly from headquarters to country offices. In other instances, they flow from headquarters to the region and from there to the field, or from the region to the field with little or no headquarters input. Linkages also flow between field offices and between headquarters offices. Not uncommonly, linkages between headquarters and the field are bypassed entirely when headquarters works directly with national Governments: the Department of Economic and Social Affairs, for example, works directly with some African

countries in preparing poverty reduction strategy papers. These multidirectional linkages, while potentially enhancing synergies and exploiting the full capacity of knowledge and expertise in the United Nations system, also create vulnerability insofar as lack of coherence and consistency. In the same country, for example, young people can be addressed as a vulnerable group requiring special treatment, or as the future labour force that must be prepared to make a strong contribution to the socio-economic development of the country.

19. Differences in the organizational structures of agencies also create complexity in linkages. For example, headquarters typically consists of several major departments, each with a distinct field of work; regional offices, if they exist, are often located in different countries and carry out different functions. Also, some field offices are responsible for groups of countries rather than one country, and field staff undertake representational and/or technical roles. Furthermore, lines of authority and reporting are not always consistent within and across agencies; for example, in some agencies administrative functions are located exclusively at headquarters, while in others they are located at regional and country offices. While recognizing that organizational differences among agencies are unavoidable, and that the lines of authority and roles and responsibilities assigned by headquarters to field units cannot be the same across all entities, these differences do impact upon the effectiveness of collaboration between headquarters and the field. OIOS noted an example of this in one country in which collaboration between two field agencies on a poverty mapping project was impeded by lengthy headquarters/field reporting requirements. OIOS supports the initiatives of the United Nations Development Group to align the regional structures of member organizations and to simplify and harmonize planning and programming procedures.

**B. In practice, the headquarters/field paradigm for poverty eradication is characterized by a wide diversity of roles and activities, unfulfilled complementarities, shifting boundaries and a limited role for non-resident agencies**

**Poverty eradication roles and activities**

20. A wide diversity of perspectives, roles and responsibilities are associated with poverty eradication. While ideally these collectively contribute to a system-wide approach to combating poverty, OIOS noted that headquarters and field staff perceive of poverty eradication within a narrower context of individual programme activities. In 2004, the comprehensive policy review of operational activities confirmed that institutional mandates and identities continue to be the driving forces for most staff, and maintained that a system-wide culture among staff was increasingly recognized as a necessity, but was not yet a reality (A/59/85-E/2004/68, para. 50). The dominance of institutional mandates constrains effective linkages. Efforts at both the intergovernmental and inter-agency levels should aim at simplifying and harmonizing policies and procedures in a mutually reinforcing manner.<sup>9</sup>

---

<sup>9</sup> OIOS notes that, in April 2004, the Chief Executives Board approved the establishment of a Senior Management Service in the United Nations system to enhance inter-agency cohesion and coordination and to support the creation of a common management culture, among other goals.

21. At the headquarters level, poverty eradication activities encompass various facets. Twenty-nine subprogrammes<sup>10</sup> explicitly refer to poverty in their 2004/2005 work programme in the Integrated Monitoring and Documentation Information System (IMDIS). This includes 107 different outputs that specifically refer to poverty; most are publications, parliamentary documentation and expert group meetings. Only 8 of the 107 outputs are field projects. Furthermore, within the context of their work, headquarters programme managers define poverty eradication in various ways: in relation to economic growth and sustainable development, statistics and monitoring, capacity-building of Member States, human settlements and the environment. They view their overall role in poverty eradication as one of offering advice, recommending policy and/or providing technical assistance.

22. At the field level, poverty eradication is perceived within the context of providing support to national Governments. A majority of resident coordinators report spending 50 per cent or more of their time on poverty work.<sup>11</sup> Most report that the support provided by their country team to national Governments includes assistance with assessments, policy and strategic planning, programme or project design and implementation, and knowledge-sharing; they indicate that policy and strategic planning is their highest priority. Nearly all resident coordinators state that the national Government accepts and welcomes the United Nations role in poverty eradication.

23. Both headquarters and field survey respondents consider their poverty eradication mandate to be clear. Most programme managers report having been given an explicit directive to guide and focus their poverty activities based on the outcome of a United Nations global conference (such as the World Summit on Sustainable Development) or on a General Assembly resolution. Similarly, almost all resident coordinators report having a clear and sufficient mandate to guide their poverty work. However, OIOS observed that respondents are often not as aware of how their work fits into the overall poverty eradication activities of the United Nations system.

### **Unfulfilled complementarities**

24. The roles and activities discussed above comprise the headquarters/field paradigm, and OIOS concludes that, in order for the paradigm's complementarities to be fully realized, a combination of strong institutional linkages, knowledge-sharing in regard to activities of mutual relevance, good working relations and mutual trust is required. However, OIOS observed that poverty eradication linkages are often structured around specific projects and not incorporated into standard operating procedures. Headquarters staff report being most likely to work jointly with other agencies on research and training projects and less likely to work together on programme development and implementation. Field staff report being most likely to work with headquarters staff on specific projects, such as publications.

25. OIOS also observed insufficient knowledge and mutual understanding between headquarters and field staff. One fourth of programme managers volunteer that a lack of knowledge about related activities being undertaken by other agencies

<sup>10</sup> Of the 134 subprogrammes with a specific programme of work in IMDIS.

<sup>11</sup> Based on the results of the survey, there is no correlation between the time spent on these activities and the region in which the office of the resident coordinator is located.

results in weak linkages between headquarters and the field. In addition, most resident coordinators cite the absence of field experience among headquarters staff as the main obstacle to effective linkages; a common concern was that visions at the headquarters level do not match capacity at the country level. On the other hand, some headquarters staff consider that their work in supporting intergovernmental processes and debate and translating global agreements to the country level is not fully understood and appreciated by field staff as important components of the United Nations role in eradicating poverty. They also emphasize the importance of flagship publications; for example, the *World Economic Situation and Prospects*, which in 2005 will be jointly produced by the Department of Economic and Social Affairs, the United Nations Conference on Trade and Development and the regional commissions, analyses the national and global economic environment from the perspective of their impact on development, including poverty reduction. OIOS is of the view that staff secondments between headquarters and field offices could address this lack of common understanding.

26. Contributions made by each actor in the headquarters/field paradigm must be considered to add value, which OIOS has determined is not always the case. In particular, headquarters directives are not consistently viewed as helpful. When asked about poverty work guidelines, one half of resident coordinators rate the usefulness of the guidelines as fair or poor, and one third consider that the country team has not been provided with sufficient tools to assist in implementing poverty eradication activities. Regarding field level contributions, some respondents maintain that country-level capacity is not always sufficient to provide the technical expertise required to assist with national development needs and priorities.

### **Shifting boundaries**

27. OIOS noted that, with technological advances and new organizational structures, boundaries between traditional headquarters and field functions are shifting; normative, analytical and operational functions are no longer exclusive to any one entity or level. OIOS endorses this shift as strengthening linkages between headquarters and the field, provided adequate steps are taken to avoid overlap and duplication. In the Department of Economic and Social Affairs, for example, the Division for Public Administration and Development Management creates a practical linkage between the policy directives issued at headquarters and its country-level capacity-building initiatives, especially in providing advisory services in the establishment of pro-poor institutions and processes. At the United Nations Development Programme (UNDP), the headquarters-based Regional Bureau for Latin America and the Caribbean has linked its poverty activities with the field both analytically and operationally through, inter alia, fielding poverty-related missions, providing advice to countries on poverty reduction strategy papers, publishing poverty-related books and coordinating multi-agency meetings on the Millennium Development Goals.

### **Role of non-resident agencies**

28. One of the biggest challenges with regard to linkages between headquarters and the field is the lack of a field presence by several agencies, particularly in the Secretariat, engaged in poverty work. The General Assembly, in paragraph 46 of resolution 59/250, stressed that the specialized agencies, the regional commissions and other United Nations agencies with no country representation or limited

country-level presence should contribute their accumulated analytical and normative experience so as to enable the use of all capacities available within the United Nations system. For this to occur, mechanisms must be in place to ensure that the contributions of non-resident agencies, if they are to be of relevance to the development needs of the country, are consistently and regularly incorporated into field level activities. At the Chief Executives Board retreat in October 2004, concrete proposals were made to engage more systematically non-resident agencies in programming efforts and services at the country level, including by the increased use of videoconferencing. However, OIOS observed that currently there is no direct service line to non-resident agencies. With regard to these agencies, country teams must know whom to contact and how to contact them, and must adapt by making such contacts a regular part of their working methods. OIOS concludes that non-resident agencies should determine their primary role in poverty eradication and successfully inform and build partnerships around it.

29. OIOS also observed a difference in how headquarters and field staff view the resident coordinator system as the main mechanism for linking non-resident agencies with the field. The General Assembly, in paragraph 69 of resolution 56/201 of 6 March 2002, encouraged enhanced dialogue, feedback, participation and interaction between the resident coordinator on the one hand, and, inter alia, the regional commissions and organizations of the United Nations system without field level representation on the other. OIOS observed some disparity in this regard. Programme managers report that non-resident agencies are more likely to link with country teams through regional offices or national Governments, and not through resident coordinator offices. In contrast, nearly one half of resident coordinators maintain that non-resident agencies link with country teams through their offices.

30. While field presence is often not possible, some country-level representation can have a positive impact by more directly utilizing the expertise of the agency represented. The 2004 report on the comprehensive policy review states that, in particular, field presence should reflect priority sectors and issues (A/59/85-E/2004/68, para. 110). One example is field staff of the United Nations Human Settlements Programme (UN-Habitat) in Ethiopia.<sup>12</sup> Having a programme manager there has buttressed the importance of improving human settlements — specifically, developing small and medium-sized towns — to the overarching national goal of poverty eradication in the country.

### **C. Better integration of regional entities, in particular the regional commissions, into the headquarters/field transmission line would strengthen linkages**

#### **Role of the regional commissions and the regional offices of other United Nations entities**

31. The role of the regional commissions and the regional offices of other United Nations entities varies from one entity to another. At present, poverty analysis and achievement of the Millennium Development Goals constitute a high priority for all regional commissions. The regional level offers an opportunity to exchange national

<sup>12</sup> UN-Habitat has a partnership with UNDP, whereby it attaches its staff to some UNDP field offices.

experience on interrelated policy areas which are of crucial importance to eradicating poverty. Regional offices play analytical and operational roles, such as conducting research, undertaking technical cooperation projects, providing a forum for harmonizing policy perspectives among countries in their respective regions and providing direct support to country teams. Respondents generally agree that the value added is their ability to mobilize regional stakeholders and to discuss and contribute to poverty eradication from a regional perspective. Significantly, several programme managers attest to the importance of the regional level in linking headquarters and field activities; one third state that they link with the field most commonly through a regional entity.

32. The role of the regional commissions was often raised during the conduct of the present evaluation, and OIOS noted that linkages between the regional commissions and country offices are particularly weak. The 2004 report on the comprehensive review of operational activities stated that the involvement of the regional commissions in country programmes remained limited, although it did state that country teams recognize the potential benefit of closer collaboration with the regional commissions on issues with cross-border, regional and global dimensions (A/59/85-E/2004/68, para. 63). In paragraph 76 of resolution 59/250, the Assembly called for improved mechanisms for access to the technical capacities of the United Nations system at the regional and subregional levels. There is a need for both the regional commissions and country teams to be proactive, especially in the preparation of the common country assessment and UNDAF and in the incorporation of relevant cross-border, subregional and regional elements. Many field level respondents agree that the regional commissions currently play a limited role in their work. Fewer than one half of resident coordinators report linking on a regular basis with the regional commissions in regard to work on poverty eradication (the one exception being statistics, which several identify as an area in which an important contribution is made by the regional commissions). Where the regional commissions do interact with country offices, interactions are most likely to pertain to a specific activity or project. Respondents suggest that the regional commissions should inform country teams on a regular basis of new research and products, along with the relevant contacts. *The Regional Commissions New York Office stated that it is necessary that the Resident Coordinator and country team seek the involvement of the regional commissions and other entities at the regional level in order to give greater and more systematic consideration to the regional and subregional dimensions of development and to maximize the opportunities offered by the incorporation of the regional dimensions of development into their country-level processes. Further, the regional commissions can assist in building partnerships and monitoring the implementation of the Millennium Development Goals from a regional perspective. There is also potential for the resident coordinator and country teams to utilize the regional coordination arrangement established under Economic and Social Council resolution 1998/46 of 31 July 1998, for which the regional commissions serve as the secretariat.*

33. In no other region is the goal of poverty eradication more urgent than in sub-Saharan Africa. The work of the Economic Commission for Africa (ECA) is therefore especially significant. OIOS noted several recent ECA poverty-related projects that are of relevance and utility to country teams in Africa. For example, one ECA division has prepared spatial poverty maps for Africa. Another ECA project involves the development of a model and guidebook for collecting,

analysing and disseminating gender-specific poverty data. These projects, however, have not been disseminated to country teams in Africa. Respondents at ECA admit that interaction with country teams in Africa could be strengthened and, despite the physical proximity of their offices, members of the country team in Ethiopia have limited awareness of the work of ECA. In this regard, OIOS commends recent ECA efforts to brief that country team about its work.

34. Several factors appear to limit the integration of the regional commissions into the headquarters/field transmission line. Currently, few if any systemic mechanisms link their activities to those of country offices. Language is another factor. For example, the Economic Commission for Latin America and the Caribbean (ECLAC) has produced several reports on poverty-related topics in Spanish only; without translation into English, their value for other regions is limited. When asked about the feasibility of translating executive summaries, ECLAC staff responded that the funds were not available. OIOS considers that there should be central support resources for disseminating important regional information, not only to the field but to other regions.

35. In addition to feedback on the regional commissions, feedback from country teams indicates less satisfaction with the regional support provided by their own agencies. One fourth of resident coordinators assess regional support for their poverty eradication activities as fair or poor (their overall rating of headquarters support is higher). One view offered on regional offices is that they are too far away, and there is no specific support plan for real engagement with country offices.

36. OIOS noted that linkages between regional and headquarters offices were generally stronger. In the Department of Economic and Social Affairs, for example, linkages exist with the regional commissions in regard to joint publications and follow-up to world conferences and summit meetings. At UNICEF, regional offices, in addition to acting as policy advisers to country teams, also act as conduits for transferring field experience back to headquarters.

### **Strengthening the regional presence**

37. Steps are being taken to enhance the interlinkages among the regional commissions, and OIOS endorses these as facilitating stronger overall linkages. In particular, OIOS notes that the role of the regional commissions in the achievement of the Millennium Development Goals is discussed at the periodic meetings of the executive secretaries organized by the Regional Commissions New York Office, which facilitates the exchange of experience and best practice among the regions.

38. In addition to the regional commissions, other United Nations entities are increasingly utilizing regional offices. In Africa, the mandate of the Eastern African Regional Office of the Office of the United Nations High Commissioner for Human Rights covers five areas: partnering with ECA, strengthening the African Union human rights agenda, collaborating with country teams, participating in initiatives undertaken at the subregional level and advocating increased awareness of human rights issues. OIOS notes that this Office plays an important role in advocating and providing training on a human rights-based approach to poverty work. At the United Nations Population Fund, nine region-based country support teams provide strategic technical support and develop capacity at the regional and country levels. They also provide a field-based regional perspective and undertake knowledge-sharing at the

organizational and regional levels. At UNDP, greater regionalization is evident in the increasing decentralization of its functions.

39. Regarding intraregional harmonization, in order to strengthen and streamline the support provided by regional offices to country teams in 10 Southern African countries in response to the triple threat of food insecurity, HIV/AIDS and weakened capacity for governance, the Executive Committee of the United Nations Development Group initiated a regional directors team pilot project, located in Johannesburg, South Africa. The team, which will be initially chaired by UNDP and which comprises regional representatives and/or directors of seven United Nations entities, is charged with providing coherent, coordinated and efficient support to country teams, drawing upon the collective expertise and experience available at their respective regional offices, with a view to ensuring an effective United Nations response to the triple threat in the affected countries. An issue under discussion but so far not addressed is how to incorporate ECA into the model and how the pilot project should relate to the work of ECA on regional issues of relevance.

#### **D. Stronger headquarters and field level coordination would facilitate more effective linkages**

##### **Coordination at headquarters**

40. A common vision and agenda at either end of the headquarters/field transmission line are needed for effective linkages in relation to poverty eradication work. At the headquarters level, inter-agency coordination is required on normative, analytical and operational issues; however, OIOS noted that such coordination does not consistently occur. Each of the headquarters inter-agency bodies previously discussed (Chief Executives Board, United Nations Development Group and Executive Committee for Economic and Social Affairs) has a different perspective but all share common objectives. The Chief Executives Board and its structures deal with the overall policy framework which often impacts upon country-level operational activities, while the United Nations Development Group serves as an instrument for policy implementation. Given that all three address issues of relevance to poverty eradication, coordination among them is particularly important. While common membership is often cited as meeting the need for coordination, OIOS is of the view that this must be practically translated into substantive dialogue and exchange. A clearer delineation of responsibilities among these inter-agency bodies would also be helpful.

41. Despite the significant progress made in inter-agency coordination over the past decade, the autonomy of governing bodies in several United Nations entities can have a detrimental impact on linkages between headquarters and the field. This is especially true given the multiple dimensions of poverty. At the country level, for example, overlapping headquarters mandates often result in numerous agencies working in the same poverty sector (such as health); in addition to resulting in unnecessary duplication, this also means that other, more relevant dimensions of poverty eradication in the country may be insufficiently addressed. Field staff in one country allude to this by stating that the emphasis of other United Nations agencies on social issues in the country has resulted in insufficient attention being given to private sector development and enterprise. The 2004 report on the comprehensive policy review of operational activities states that agency mandates coming from

headquarters are likely to have more priority than inter-agency agreements made at the country level; it further states that inter-agency agreements reached at headquarters are not consistently interpreted at the country level (A/59/85-E/2004/68, para. 61). OIOS concludes that, ultimately, the success of common efforts made towards the broad goal of poverty eradication depends upon shared vision and commitment. A system-wide strategy is needed as a basis for mutually reinforcing and complementary actions between headquarters, between headquarters and the field, and within and among field offices.

42. Intra-agency coordination is also necessary in offices at headquarters in order for headquarters to function as a cohesive unit. One task of any headquarters is to coordinate field activities; another is to translate the policies and mandates of its governing body into directives and guidelines for regional and country offices. On cross-cutting issues such as poverty, it is important that all relevant units understand the agency's mandate so that they can contribute fully and in a coordinated manner towards its fulfilment. Similarly, it is desirable that directives and guidelines to regional and country offices pass through a filter so that the messages sent are mutually coherent, even if they emanate from different headquarters units. This point was raised by field staff from one resident agency with headquarters offices in both New York and Geneva, one concerned with field support and finances and the other with political matters. Despite this division of functions, field staff state that policy transmission and reporting lines are not always coherent. OIOS considers that appropriate management structures are needed to address this lack of coherence.

### **Coordination in the field**

43. At the field level, the resident coordinator system is the primary United Nations mechanism for coordinating country-level activities and coordinating field activities with those at headquarters. While various frameworks and work tools for field level coordination have been established, OIOS observed that the effectiveness of the resident coordinator system depends on the capacity of the office to fulfil its field coordination role as well as the calibre of the country team and resident coordinator. The post requires thorough knowledge and understanding of the United Nations system and its complex interrelationships, which is particularly significant for establishing strong headquarters linkages. In attempting to bring about coordination and cohesion to various country-level activities of the United Nations, resident coordinators have limited managerial authority; they must rely on leadership qualities and the power of persuasion, as well as the support of their agencies' headquarters.

44. OIOS observed that the capacity of the resident coordinator system as a linkage mechanism needs strengthening. Effective coordination requires sufficient resources and working methods, including adequate support staff, regular and ad hoc meetings, local intranets and other communications systems, and training in team building. Many respondents emphasized the insufficient capacity of the resident coordinator system, in particular as regards its ability to coordinate effectively with headquarters. An OIOS analysis of the composition of country teams reveals that their size ranges from 2 to 31 members.<sup>13</sup> In a few countries, only UNDP is present, while in others, 22 agencies are represented. Clearly the

<sup>13</sup> The analysis was undertaken in October 2004.

requirements for the large teams, in terms of policies, procedures, working methods and linkages with headquarters, differ significantly from those for the small teams.

45. OIOS concludes that if the resident coordinator system is to work well as a linkage mechanism, all country team members must respond as part of the United Nations system to the overall mandate assigned by the General Assembly and the Economic and Social Council in the area of poverty eradication; in addition, they must respond to specific mandates from their own executive bodies. Mandates are invariably broadly compatible, but these are occasions when the priorities and the financial resources attached to them are at odds. Multiple agencies can be engaged in projects related to improving health conditions at the country level (such as establishing rural health centres or working to reduce infant mortality), but their activities must be aligned around common goals and strategies if they are to be most effective. OIOS noted that, in one country, 11 agencies are involved in the same social service sector. Feedback from the OIOS resident coordinator survey alludes to this problem. One third of resident coordinators indicate that there is no agreed-upon division of labour among country team members in regard to poverty activities; one fourth report unnecessary duplication of effort among the various agencies in the country. For example, the resident coordinator in one country states that there is overlap in the good governance projects engaged in by several agencies working with the same subnational unit or governmental agency. Strengthened coordination and linkages within headquarters entities, as well as between these entities and their field offices, would alleviate these problems by addressing unnecessary duplication.

## **E. Effective linkages between headquarters and the field need to be supported by clear and systematic management practices, work tools and communication strategies**

### **Management practices**

46. Management practices in regard to administration and human resources are necessary for effective linkages. Currently, not all practices adequately meet the coordination needs of multilevel functions. Concerns about the effectiveness of management policies, including the lack of sufficient training, were common among OIOS respondents. At present, there is no system-wide training programme on coordination practices and tools, particularly for headquarters staff.<sup>14</sup> Nor is there training that specifically promotes headquarters/field knowledge-sharing in relation to common activities of relevance to poverty. OIOS notes, however, that the United Nations System Staff College has various training programmes, including training in joint programming and the common country assessment and UNDAF, and an inter-agency simulation game to promote coordination among agencies. The United Nations Development Group, together with the Staff College, has a programme for training country teams and regional staff in coordination tools. Notwithstanding this, most resident coordinators report not having adequate training, including on such topics as best practices. OIOS encourages the provision of training for regional staff and country teams such as that conducted by the Office of the United Nations

---

<sup>14</sup> Although training in team building is offered by the Office of Human Resources Management, it is typically conducted within individual work units of the same entity.

Development Group, which includes training in specific tools, team building and quality assurance.

47. While administrative tools should foster linkages between headquarters and the field, they may also hamper linkages. OIOS noted several examples of this, including field staff using two different financial reporting systems because of a field level partnership between different agencies and the inability of field managers to hire personnel promptly in response to a humanitarian crisis owing to a lengthy hiring process handled exclusively by headquarters. Field disruptions are also caused at times by delays in obtaining budget allotments from headquarters.

48. Finally, regarding performance appraisal, there must be an incentive system to promote interaction, collaboration and linked activities. A common view was that it is always easier not to link or coordinate and that as long as there is no serious performance system linked to the issue of cooperation and linking there will never be a harmonized United Nations system. Management must recognize that coordination is a time-consuming but vital job requirement of country representatives and reward it accordingly. Individual performance appraisals, for headquarters and field staff, must consistently and uniformly address and recognize the ability and willingness of an individual to work effectively as a fully functioning team member.<sup>15</sup> OIOS supports the integrated system for accountability and performance appraisal of resident coordinators and country teams being developed by the United Nations Development Group.

### **Work tools**

49. Work tools are the means through which linkages happen, and OIOS observed a tendency to rely on tools that require personal interaction, such as meetings and workshops, rather than systemic tools such as knowledge management networks. In particular, most respondents to the OIOS survey reported that meetings and workshops deliver the best results. Despite this preference, however, meetings and workshops are also most commonly cited by respondents as requiring the most improvement. This suggests a need for developing and disseminating more effective meeting protocols.

50. Other effective tools for headquarters/field linkage include joint training, common programme planning and multi-agency missions. It is important that joint training incorporate both policy papers and case studies to ensure that headquarters and field perspectives are considered. Joint programme planning, while more likely to occur within headquarters and field entities, is less likely to occur between the two levels. OIOS is of the view that more consultation on future work programmes would strengthen linkages; for example, such consultation could occur among the units of the Department of Economic and Social Affairs and the regional commissions that deal with similar subject matters.

### **Communication strategies**

51. Effective communication strategies provide an opportunity to institutionalize linkages so that there is less reliance on personal connections. OIOS observed that currently there are few system-wide information networks, except in such areas as humanitarian assistance; at the Chief Executives Board retreat in October 2004,

---

<sup>15</sup> Team work is one of the core competencies of the current performance appraisal system.

senior management recognized that such systems are crucial to enhancing system-wide, coordinated engagement and support. Another common concern observed by OIOS is that of information overload: there is a need to strike a balance between too much and too little information by taking a more strategic approach and prioritizing the information shared.

52. Currently, there are limitations in the headquarters/field communication processes. At the headquarters level, the Department of Public Information is concerned with communicating with an external audience, but there are few strategies for internal communications that specifically address headquarters/field functions. OIOS also noted that the Office of the United Nations Development Group had started to develop its own communication strategy only in 2004. At the field level, resident coordinators are responsible for coordinating communications, based on the priorities established at headquarters. All new resident coordinators are given a day of training in communication skills during their induction workshop; however, support beyond this is more limited. A further concern of field staff is inadequate feedback from headquarters on field reporting.

53. Crucial to communication is the dissemination of best practices. Current institutional mechanisms for feedback on lessons learned are limited, with each agency adopting its own approach. For poverty eradication, the dissemination of best practices is particularly significant given the extensive research on poverty. This emphasizes the need for the effective dissemination of information so that viable solutions are promoted and failed policies identified. Currently, the main United Nations entity for sharing best practices in poverty eradication is UNDP. Regional offices, including the regional commissions, must also fully realize their potential to disseminate regional best practices in poverty eradication through their websites and publications.

## **F. Best practices address weaknesses in linkages between headquarters and the field**

54. OIOS concludes that best practice linkages facilitate coordination, collaboration and synergy among headquarters, regional and field offices and tap into the collective capacity of the Organization to foster the success of poverty eradication activities. OIOS determined that the factors contributing to strong linkages are: strong communication; ongoing feedback; systematic sharing of information, research and data; a combination of personal and institutional networks; a common understanding of objectives, priorities and strategies; and mutual trust. OIOS noted several current best practices for effective linkages.

### **Utilizing knowledge management networks to transmit guidelines, knowledge and expertise between headquarters and field offices**

55. Knowledge management networks have increasingly enhanced linkages between headquarters and the field. In particular, UNDP maintains numerous knowledge management networks around six communities of practice.<sup>16</sup> Of greatest relevance for poverty eradication are the Millennium Development Goal Network

---

<sup>16</sup> UNDP uses the term “community of practice” to refer to a broad thematic area, such as poverty, in which multiple actors are engaged.

(MDGNetwork), open to all participants, and the poverty network, restricted to UNDP staff. In the knowledge management field, it is generally agreed that these networks should be moderated and managed by a facilitator. The utility of the networks also depends on the timeliness of responses. Recently, MDGNetwork was used by staff of the International Labour Organization in Sri Lanka following the South Asian tsunami disaster. Within two days of posting a request for information on conducting a rapid needs assessment, 12 replies had been received offering specific studies, methodologies and instruments.

56. Electronic networks can be used to share knowledge and experience, to formulate and transmit policy and guidance and to obtain expert feedback. Two recent examples illustrate the effective use of these networks. First, in 2004, following the release of the Millennium Project draft report on achieving the Millennium Development Goals, a discussion was launched on the poverty network, focusing on the input of UNDP in establishing Goal-based poverty reduction strategies. Second, a discussion launched by the Bureau for Development Policy of UNDP on MDGNetwork aimed at sharing concrete experiences with regard to initiatives for localizing the Millennium Development Goals and identifying gaps for further research. The discussion's introduction stated that its outcome would be a guidance note for localizing the Goals, based on feedback from headquarters and the field.

57. OIOS is aware that knowledge management networks have their limitations. One is language, which can restrict participation.<sup>17</sup> Another is that networks are not the definitive source of information for questions raised. Further, the massive inflow of messages from multiple sources can be so great that subscribers do not read them, highlighting the need for a more strategic approach to structured knowledge-sharing. Perhaps most significantly, access to the networks must be broadened. Currently, approximately 60 per cent of subscribers to MDGNet are UNDP staff (most at field offices), and the rest are from some 55 different United Nations entities as well as other groups. Based on OIOS survey results, field staff are more likely than headquarters staff to rely on knowledge management networks as a linkage tool.

#### **Forming inter-agency partnerships and promoting regular networking and consultations around poverty dimensions**

58. Inter-agency partnerships can be a successful medium for pooling headquarters and field level expertise, experience and resources in regard to poverty eradication issues. OIOS noted several such examples which are significant in that they revolve around thematic poverty dimensions rather than individual projects and include headquarters, regional and field level participation. The Rio Group on Poverty Statistics (of which ECLAC is the technical secretariat) is an inter-agency group that brings together the experience and concerns of the various organizations working on the measurement, interpretation and use of poverty statistics. The Global Partnership on Forest Landscape Restoration is an inter-agency partnership bringing together a broad range of expertise and perspectives on sustainable forest management. The secretariat of the United Nations Forum on Forests in the Department of Economic and Social Affairs and the Food and Agriculture Organization of the United Nations (FAO) are among its partners; one of its projects in Senegal involved a group of

<sup>17</sup> Both the poverty network and MDGNetwork provide translations of consolidated responses.

village women restoring their degraded environment and thereby improving their livelihoods. This partnership illustrates an effective collaboration between an entity with no field presence (United Nations Forum on Forests) and one with a field presence (FAO). FAO also partnered the United Nations Environment Programme (UNEP) and the International Center for Tropical Agriculture in connection with the poverty mapping initiative, which produces and promotes the use of poverty maps. Finally, UN Water is the United Nations system-wide inter-agency mechanism for follow-up to the water-related decisions of the World Summit on Sustainable Development and the Millennium Development Goals. UN Water works at the global, regional and country levels to ensure coherence and integration among member agencies.

59. Regular networking and consultations among agencies, incorporating headquarters and field perspectives, also create strong linkages. The Department of Economic and Social Affairs, for example, links on a regular basis with UNEP, UN-Habitat and UNDP in preparing for meetings of the Commission on Sustainable Development. These consultations provide important perspectives on environmental, human settlement and other sustainable development issues. The Department also regularly consults with UN-Habitat and the International Labour Organization on youth employment matters, which are also of relevance to poverty eradication.

**Utilizing websites and other electronic forums to disseminate best practices and lessons learned in regard to poverty eradication activities at the headquarters and field levels**

60. Websites have the potential to effectively disseminate knowledge and best practices within and between headquarters and field entities, and agencies typically use their respective intranets as another means of linking their headquarters and field offices. OIOS noted three websites as good examples for poverty eradication.<sup>18</sup> The first is the website of the Division of Sustainable Development of the Department of Economic and Social Affairs, discussed in a OIOS report issued in 2004 in which OIOS stated that the website is comprehensive, easy to navigate, current and rated highly by users (E/AC.51/2004/4, para. 24). The second is the website of the Statistical Division of the Department, which contains a Millennium indicators database and relevant publications on issues related to poverty statistics. The third is the website of the United Nations Development Group, which contains, among other features, useful information on work tools, publications and best practices.

61. The regional commissions also maintain websites. A review of these reveals variability in case of navigation, content, web search limitations (language and technical) and contact information, as well as in the availability of statistical information. Only one contained specific information on best practices in the area of poverty eradication. Despite this variability, these websites can be utilized to publicize regional publications on poverty issues, as well as regional best practices for poverty eradication activities.

---

<sup>18</sup> Other programme websites are also relevant to poverty-related topics. The three websites discussed in the present report are <http://www.un.org/esa/sustdev>, <http://unstats.un.org> and <http://www.undg.org>.

62. Other electronic forums are being used to share information on poverty eradication activities. UNDP recently launched the Poverty Reduction Practice Workspace, an electronic forum for resources, lessons learned, tools and research on poverty. The forum can be accessed only through the UNDP Intranet. In addition, the regional commissions have recently established a web board to strengthen interregional cooperation and provide the necessary tools for the more effective exchange of information on programmes, projects and activities of common interest. Topics currently being discussed include water resource management and trade. However, the web board is accessible only to regional commission staff. Also, the Executive Committee for Economic and Social Affairs recently launched a website on economic and social development, organized according to 11 thematic clusters.

#### **Strengthening the resident coordinator system to link more effectively with headquarters**

63. It is commonly acknowledged that the resident coordinator system must be strengthened. The United Nations system will carry more weight with Governments and donors when it is seen to speak and act consistently through a strengthened resident coordinator system. To achieve this, country teams should be given adequate resources for staff support for common initiatives and actions, access to knowledge and experience, and training in interpersonal and communication skills. Several initiatives are being undertaken by the Office of the United Nations Development Group to strengthen the resident coordinator system. These include enhancing the resident coordinator and country team selection and appraisal processes, revising the job description of resident coordinator to take into account the system-wide representational role, and assigning more responsibility to the resident coordinator in regard to programme matters, including authority to design and implement UNDAF. OIOS notes that any initiatives to strengthen the resident coordinator system must also address the need to increase its capacity to link effectively with headquarters entities.

#### **Promoting country team best practices for linking with headquarters**

64. OIOS noted several country team best practices for working together more cohesively as a unit and for linking with headquarters. These include holding well-prepared and structured monthly country team meetings, conducting facilitated off-site country team retreats and participating in joint programming, all of which foster knowledge-sharing and build an esprit de corps. Of particular note is the orientation of country team work programmes towards the achievement of UNDAF goals through the formation of inter-agency working groups around thematic issues, such as gender and health (particularly within the context of Millennium Development Goal needs assessments). A further good practice is strengthening the working relationships between country teams and donors, for example, by establishing donor assistance groups.

65. OIOS observed that a commitment to working together and a common vision of mission and purpose greatly enhance country team coordination. Such an environment depends on the leadership abilities of the resident coordinator, the willingness of the team members to be part of a cohesive group and their ability to think and work beyond agency boundaries. While much can be achieved by a well-functioning and motivated country team whose members collaborate and interact well, it is equally important that country teams are guided and provided at the

headquarters level with substantive and coordinated policy and administrative support.

## **V. Conclusion and recommendations**

66. In adopting the United Nations Millennium Declaration, Member States of the United Nations committed themselves to fighting poverty. Given its multifaceted nature, poverty must be tackled with a comprehensive, multisectoral and coordinated approach, of which effective linkages between headquarters and the field are a crucial component. The complementary normative, analytical and operational roles of the headquarters/field paradigm must be fully empowered to best utilize the cumulative expertise and knowledge in the United Nations system. Periodic assessments should also be undertaken to see how linkages can be improved.

67. The current complex system of linkages is not conducive to effective and efficient collaboration between headquarters and the field. This is due to a multitude of factors: a wide diversity of mandates, perspectives, roles and activities in regard to poverty eradication; transmission lines that are often dependent on personal relationships and ad hoc agreements; and linkage structures that are multidimensional and multidirectional. One of the biggest challenges with regard to linkages between headquarters and the field is the lack of a field presence by several agencies engaged in poverty work and the need more fully to inform field staff of the activities, knowledge and expertise available at these agencies.

68. Effective linkages are also dependent upon coordination at headquarters and in the field, as well as well-integrated regional entities. At the headquarters level, both inter- and intra-agency coordination must ensure that a common strategy and agenda for poverty eradication is transmitted to the field. At the regional level, more must be done to fully integrate regional offices, in particular the regional commissions, into poverty eradication activities. At the field level, the capacity of the resident coordinator system must be strengthened not only to coordinate country-level activities but also to effectively coordinate efforts with headquarters. Linkages must also be supported by management practices and work tools which facilitate interaction, collaboration and joint activities.

69. Several best practices for linkages between headquarters and the field foster the success of poverty eradication work. These include the effective use of knowledge management networks, the establishment of inter-agency partnerships around thematic dimensions of poverty, informative websites and other electronic forums, and a strong resident coordinator system and country team practices that promote effective coordination with headquarters entities.

70. At its forty-fourth session, the Committee for Programme and Coordination requested OIOS to include, in future in-depth and thematic evaluations, “a brief section on questions in which intergovernmental guidance

and follow-up, by the Committee or other appropriate intergovernmental bodies, would be useful”.<sup>19</sup> In reflecting on the recommendations below, the Committee may wish to consider ways in which to promote and enhance system-wide coordination for poverty eradication, with a particular focus on the operational issue of linkages between headquarters and the field. This is particularly relevant given the Millennium Summit planned for September 2005.

71. Based on these findings, OIOS makes the nine recommendations set out below. These recommendations are complementary to those adopted by the General Assembly in resolution 59/250 on the triennial comprehensive policy review of operational activities for development and to the work programme and ongoing initiatives of the Chief Executives Board. Given the call for greater harmonization within the United Nations and that no single part of the Organization can work in isolation, several recommendations call for system-wide action.

## **A. Inter-agency coordination**

### **Recommendation 1**

#### **Enhance collaboration among inter-agency coordinating bodies**

72. The Secretary-General should appoint a working group to consider the respective roles, responsibilities and contributions of the Chief Executives Board, the United Nations Development Group and the Executive Committee for Economic and Social Affairs, as well as practical measures to enhance their coordination and collaboration in regard to common policy issues that are of relevance to poverty eradication, with a view to bringing the United Nations system closer together analytically and operationally. OIOS notes with satisfaction the invitation extended by the Chairman of the United Nations Development Group to the Chairman of the High-Level Committee on Programmes of the Chief Executives Board to participate in meetings of the Group’s Executive Committee, as well as the establishment of a task force to review the implications of General Assembly resolution 59/250 with a view to identifying concrete ways for the Committee and the Group to complement each other’s work.

## **B. Information-sharing**

### **Recommendation 2**

#### **Introduce a more structured, facilitated and strategic approach to system-wide knowledge management networks**

73. Knowledge management networks should be effectively utilized to enhance the sharing of information and expertise in the United Nations. Two ways of achieving this are to broaden membership of existing networks and to create new system-wide communities of practices around poverty eradication issues. In particular, participation in the poverty network currently

<sup>19</sup> *Official Records of the General Assembly, Fifty-ninth Session, Supplement No. 16 (A/59/16)*, para. 383.

administered by UNDP should be open to all staff engaged in poverty work in the United Nations system. Information shared through networks must be prioritized to safeguard users from information overload. This could involve the consolidation of existing networks, as well as the creation of a continuum of users linked through overlapping memberships. OIOS considers that the United Nations Development Group, in consultation with UNDP and the Chief Executives Board, is in the best position to take the lead in steering this process. The current work of the Board and the Information and Communication Technology (ICT) Network on developing a vision for system-wide knowledge-sharing should be considered in this effort.

### **Recommendation 3**

**Better inform country offices about the work of Secretariat entities with little or no country presence**

74. It is recommended that:

(a) The United Nations Development Group, in consultation with the High-Level Committee on Programmes of the Chief Executives Board (which gives regular consideration to keeping country-level offices informed and to promoting the flow of information between headquarters and regional offices as part of its work programme), should determine how country teams can be better informed about the activities of non-resident agencies whose expertise and comparative advantage are relevant to national poverty eradication priorities, and how to increase collaboration between country teams and these agencies, including through inter-agency partnerships and through work on joint projects and programmes. The United Nations Development Group should also consider how country teams can be more proactive in involving the regional commissions and other regional entities in the preparation of common country assessments and United Nations development assistance frameworks;

(b) The Department of Economic and Social Affairs should determine practical ways of informing country offices about its poverty-related activities, including through strategic field missions and periodic news bulletins targeted to country teams.

### **Recommendation 4**

**Establish mechanisms for the regular exchange of information between the regional commissions and country offices**

75. The regional commissions should enhance their capacity to inform systematically and work together with country offices on areas of mutual interest in regard to poverty eradication activities and establish clear guidelines on how this exchange would work. This can include, on a regular basis, publication of newsletters, electronic bulletins, briefings with country teams in their respective regions and/or participation in the common country assessment and UNDAF processes. The regional commissions should also consider how to strengthen their websites as platforms for the exchange of regional best practices and lessons learned. The Regional Commissions New York Office should serve as a focal point in this regard.

**Recommendation 5**

**Review management and administrative procedures in order to foster effective linkages**

76. The High-Level Committee on Management of the Chief Executives Board should assume the leadership in establishing guidelines for secretariat departments to review their management and administrative procedures so as to ensure that they do not hamper linkages between headquarters and field offices. On a broader level, the review should examine linkage structures to make certain that communication is clear and consistent in the headquarters/field transmission line. At the working level, the review should include an assessment of work planning processes, reporting lines, budget protocols and personnel practices.

**C. Management practices****Recommendation 6**

**Establish system-wide training on common coordination methods and tools and on thematic poverty issues**

77. It is recommended that:

(a) The High-Level Committee on Management of the Chief Executives Board, in consultation with the United Nations Development Group and the Governing Board of the United Nations System Staff College, should assume the leadership in promoting system-wide training that addresses the methods and tools through which to achieve effective coordination, taking into account the needs of inter-agency collaboration and communication. The training offered by the Staff College, as well as the coordination training for country teams and regional staff currently conducted by the Office of the United Nations Development Group, can be considered for system-wide training and particularly encompass both headquarters and field staff. The training should disseminate common protocols for meetings and teleconferences in order to enhance their effectiveness as linkage tools;

(b) System-wide training on thematic issues of relevance to poverty eradication should also be explored with a view to involving both headquarters and field staff in order to exchange best practices and enhance awareness of how their work fits into the overall poverty eradication activities of the United Nations system.

**Recommendation 7**

**Incorporate coordination and collaboration in performance appraisals and incentives**

78. The High-Level Committee on Management of the Chief Executives Board should encourage and coordinate efforts by secretariat departments to systematically and consistently incorporate the job elements of coordination and collaboration for all staff, beyond the more general managerial competencies of “building partnerships” and “communication”, into individual performance appraisal systems, including by establishing common indicators of success. Incentives for working on joint activities should also be explored.

**Recommendation 8**

**Encourage staff secondments between headquarters and field offices**

79. The High-Level Committee on Management of the Chief Executives Board, in consultation with the United Nations Development Group, should promote staff secondments between headquarters and field offices to encourage learning and an appreciation of their complementary roles and functions. OIOS notes that, in April 2004, the Chief Executives Board approved a policy statement on staff mobility, in which it stated that the executive heads would actively promote inter-agency mobility.

**D. Resident coordinator system**

**Recommendation 9**

**Further strengthen the capacity of the resident coordinator system as a linkage tool**

80. OIOS fully supports the recent efforts of the United Nations Development Group to strengthen the resident coordinator system and enhance the capacity of the offices of the resident coordinators to effectively bring about coordination and cohesion in the various activities of the United Nations system at the country level. OIOS takes note of General Assembly resolution 59/250, in which the Assembly urged the broader United Nations system to provide further financial, technical and organizational support to the resident coordinator system. In its efforts to strengthen the resident coordinator system, the United Nations Development Group should pay particular attention to the capacity of the resident coordinator system to link effectively with headquarters offices and report to the Chief Executives Board on the progress made in that regard.
