**Commission on Sustainable Development acting as
the preparatory committee for the World Summit
on Sustainable Development
Second preparatory session
28 January-8 February 2002**

Outcomes of regional preparatory meetings

Note by the Secretary-General

Addendum

**African ministerial statement to the World Summit on
Sustainable Development**

**(Adopted at the African Preparatory Conference for the World Summit on
Sustainable Development held at Nairobi from 15 to 18 October 2001)**

From Rio de Janeiro to Johannesburg

1. We, Ministers of African States, met at Nairobi, Kenya, on 17 and 18 October 2001, in the context of the African regional preparatory process for the World Summit on Sustainable Development, to be held in Johannesburg, South Africa, from 2 to 11 September 2002. The aim of the meeting was to assess the progress made, the constraints encountered, the areas where further efforts are needed and the new challenges confronting Africa within the framework of the implementation of Agenda 21.¹ In doing so, we took into consideration the concerns of our continent's industry, and civil society, including non-governmental organizations, trade unions and youth.

2. We are convinced that the Summit should reinvigorate the commitment of the international community to the goals of sustainable development and give effect to a new vision based on a concrete

programme of action for the implementation of Agenda 21 in the next decade. To this effect, we reaffirm that poverty eradication is an indispensable requirement for sustainable development and reiterate our commitment to addressing all three components of sustainable development — namely, economic growth and development, social development and environmental protection, as interdependent and mutually reinforcing pillars — in a balanced way, in conformity with the fundamental principle of common but differentiated responsibilities.

3. We believe that holding the Summit in Africa will provide a unique opportunity for a genuine international partnership to achieve the development goals enunciated in the United Nations Millennium Declaration² and in the outcome of United Nations conferences and summits held since Rio, as well as in those regional initiatives that Africa has adopted. We affirm that the achievement of those development goals

is contingent on an enabling international environment, premised on the legitimate development priorities of developing countries, that addresses the fundamental challenges of financing for development, globalization and market access in the sectors of export of interest to them, thus reaching a comprehensive and lasting solution to their crippling external debt problems.

4. We recall that success in meeting the objectives of development and poverty eradication depends, inter alia, on good governance both within each country and at the international level, as well as on transparency in financial, monetary and trading systems. We are also committed to an open and equitable rule-based, predictable and non-discriminatory multilateral trading and financial system.

5. We note with concern the limited progress in the implementation of Agenda 21, which has stemmed from the lack of fulfilment by the international community of its commitments made in Rio with regard to the means of implementation, thereby hampering the achievement of sustainable development in developing countries, particularly in Africa. The implementation of the Programme of Action for the Sustainable Development of Small Island Developing States,³ adopted at Barbados in 1994, has similarly been hampered. We reconfirm that the Johannesburg Summit should not renegotiate the outcomes of Rio but should result in a concrete programme of action with time-bound measures and well-specified sources of funding to implement them.

6. We believe that a system of monitoring contributes to the effectiveness of implementation. We therefore call upon the World Summit on Sustainable Development to establish a follow-up mechanism as an integral component of all the elements of its programme of action in terms of resource flow and implementation, and to create the system required to make this possible.

7. We emphasize that poverty, underdevelopment, marginalization, social exclusion and economic disparities are closely associated with the legacy of colonialism as well as the continued exploitation of African resources. We recognize the negative economic, social and cultural consequence thereof, which have contributed significantly to the underdevelopment of developing countries and, in particular, of Africa. We urge the Summit to reaffirm

the right to development and to adopt concrete mechanisms to free the entire human race from want.

8. We recognize the important role played by civil society and the need to ensure its full participation in achieving sustainable development.

9. We note with appreciation the role of the business sector and civil society, including the youth and labour segments, in pursuit of the sustainable development agenda in line with our commitment to the multi-stakeholder dialogue. In this regard, we acknowledge their significant contributions to the preparatory process in the African region.

10. We affirm our commitment to partnership for implementing the outcomes of the Summit, mobilizing major groups and appropriately capacitating these groups to fruitfully engage in the implementation of the sustainable development agenda, perhaps in the form of the Johannesburg programme of action.

11. We invite Governments to work together with major groups to prepare concrete inputs into a programme of action.

12. We propose that the theme "People, planet, prosperity" underpin our focus on the three pillars of sustainable development, and this theme is therefore proposed as the slogan for the Johannesburg Summit.

13. We believe that the New African Initiative should be a framework for sustainable development in Africa. The Initiative, which is a pledge by African leaders, is based on a common vision and a firm and shared conviction that they have a pressing duty to eradicate poverty and to place their countries, both individually and collectively, on a path of sustained growth and development and, at the same time, of active participation in the world economy and the body politic. This programme is anchored in a determination of Africans to extricate themselves and the continent from the malaise of underdevelopment and exclusion in a globalizing world.

Achievements and constraints since Rio

14. We acknowledge that, since the United Nations Conference on Environment and Development, there has been increased awareness of the fragility of the African environment and its natural resources. Many countries have established and strengthened policy,

legislative and regulatory frameworks, including the ratification of regional and global environmental conventions, and the formulation and implementation of various environmental action plans.

15. We note that life expectancy in many African countries remains low despite some improvements since Rio. Indeed, in some countries life expectancy has deteriorated. While the overall literacy rate remains low, access to education has increased, especially for females, who have come to play a crucial role and are increasingly acting as agents for change for sustainable development. However, only 58 per cent of the continent's population have access to safe water.

16. We note the increased incidence of natural disasters in Africa, which have resulted in significant human, social and economic losses, thereby posing a major obstacle to the African continent's efforts to achieve sustainable development, especially in view of the region's insufficient capacities to predict, monitor, handle and mitigate natural disasters.

17. We further note that the level of food insecurity in Africa has reached a critical level, as the number of undernourished presently exceeds 200 million people, and 500 million hectares of land have been affected by soil degradation, including as much as 65 per cent of agricultural land. These unfavourable developments compound the problem of poverty in Africa, as the agricultural sector includes 70 per cent of the poor and represents 40 per cent of regional gross domestic product (GDP), thereby making the full implementation of the United Nations Convention to Combat Desertification in Those Countries Experiencing Serious Drought and/or Desertification, particularly in Africa,⁴ an urgent priority in the post-Johannesburg era.

18. We observe that most African economies have declined both in qualitative and in quantitative terms. The rate of GDP growth in at least half of the region has remained below 2 per cent per annum. Africa, unlike other regions of the world, continues to receive extremely low foreign private capital investment, and declining levels of official development assistance (ODA), while facing an increasing debt burden.

19. We also note that wars, civil conflicts and the proliferation of small arms, and the continued presence of landmines, have hampered the efforts of many African countries to achieve sustainable development.

Priority areas for action

Eradication of poverty

20. We observe that, while Africa is an indispensable resource base that has been serving all humanity for many centuries, poverty in Africa stands in stark contrast to the prosperity of the developed world. The process of globalization has further marginalized Africa and this has contributed to the increasing incidence of poverty in the continent. It is in this regard that the New African Initiative calls for the reversal of this abnormal situation by changing the relationship that underpins it. Achieving the poverty reduction goals of the United Nations Millennium Declaration is a joint responsibility of the North and the South. It requires the adoption of a comprehensive approach that addresses key priority areas, including: the removal of obstacles preventing the access of exports from developing countries to the markets of developed countries, debt reduction/cancellation, a review of the conditionalities of the Bretton Woods institutions, promoting industrial growth especially through small and medium-sized enterprises (SMEs), ensuring, particularly in rural areas, access to sources of energy at affordable prices, promoting microfinance, enhancing access to basic health services, sustainable rural development, agricultural development and food security, greater access to safe water and sanitation, and reducing the vulnerability of our people to natural disasters and environmental risks, as well as access to and improved standards of education at all levels.

21. We acknowledge the abundant skills and potential that exist in Africa for the development and realization of the crafts, art and endogenous technology industry. Development of this industry will contribute to the fight against poverty. Financial, technical and organizational support could also enable this sector to make a notable contribution to sustainable development in the continent.

22. Moreover, and within the framework of the world attachment to international solidarity, the acceleration of the setting up of the necessary mechanisms of the World Solidarity Fund, whose main aim is to contribute to the eradication of poverty and the promotion of the most underprivileged areas in the world, more particularly in the poorest countries, is highly recommended.

Industrial development

23. We note with concern that national economies have a narrow industrial base and that the performance of the manufacturing sector has shown a decline over the last decade when compared with the previous decade. In general, Africa is sliding into a “deindustrialization” phase at the time when it needs to expand its manufacturing base.

24. We acknowledge the fact that African countries have considerable resources, and in all fields: mineral and oil resources, agricultural resources, fishery resources, and forestry resources, but, unfortunately, these resources are not processed in a beneficial way in Africa. This constitutes a major lost opportunity for Africa. Consequently it is urgently necessary to develop and foster industry, to make it possible to add value to our resources before they are exported. SMEs/small and medium-sized industries (SMIs) have helped many emerging and developed countries to industrialize and to develop. Today, there is an emergence of SMEs/SMIs to address this, but the lack of finance, supervision and organization prevents them from playing the real role that should fall to them in respect of initiating sustainable development in Africa, and therefore institutional support must be established and sustained.

25. We recognize the contribution of industrial development to poverty eradication and efficient natural resource management. We call upon the international community to:

- Assist in enhancing the industrial productivity and competitiveness of African industries through a combination of appropriate financing and technological support services;
- Promote the development of micro-, small and medium-sized enterprises with a special focus on agro-industry as provider of livelihood for rural communities;
- Support multilateral and regional organizations in their programmes to support industrial development in Africa.

Agriculture and food security

26. We recognize that the African continent is endowed with sufficient natural resources for food self-sufficiency. However, taking into account current levels of food production and the projected population

growth in Africa, it is apparent that those levels are insufficient and will not allow the achievement of the goal of halving the number of undernourished people by 2015, as enunciated at the World Food Summit. It is imperative, therefore, to reverse the current trends of land degradation and dwindling water resources for irrigation, as well as to improve the development and dissemination of agricultural technologies within African countries, and the transfer to them of applied agricultural research and technology at affordable prices.

27. We emphasize the minimum need to double agricultural production in Africa within five years. In this respect, we resolve to increase national financing for the agricultural sector, and call upon the international financial institutions and the Global Environment Facility (GEF) to substantially increase the finance provided to the agricultural sector and for the full implementation of the United Nations Convention to Combat Desertification and other relevant conventions.

28. While we recognize the need to enhance the availability and accessibility of food to poor households, we emphasize that Africa should not be a dumping ground for subsidized food products from developed countries, or for genetically modified food. In this connection, we call upon the developed countries to remove their agricultural subsidies and to apply the precautionary principle.

Human development

29. We acknowledge that Africa is currently straining under the burden of communicable diseases that are disabling our economies. Endemic, parasitic and infectious diseases have injured the quality and retarded the productivity of Africa’s human resources. Many of these diseases have their roots in the environmental conditions under which people live, including poor environmental hygiene, inadequate access to resources, such as water and sanitation, and inadequate nutrition.

30. We recognize that the growing threat of the human immunodeficiency virus/acquired immunodeficiency syndrome (HIV/AIDS) pandemic is no longer merely a health issue, but a serious threat to sustainable development. HIV/AIDS should be incorporated in overall poverty reduction/eradication, sustainable development and economic growth

strategies. At the same time, Africa is faced with an emerging epidemic of infectious diseases and diseases related to lifestyle.

31. We call for a holistic approach to health that addresses its multiple determinants (social, environmental, economic). Efforts in Africa to ensure greater access to affordable primary and secondary health care and medical technology, improve environmental and social conditions that contribute to diseases, and build appropriate capacity in local communities, are of paramount importance. To this end, we call upon the developed world to offer greater assistance in making both preventative and curative health care available to Africa. We underscore that, in the context of the Agreement on Trade-related Aspects of Intellectual Property Rights,⁵ African countries should be allowed to take all necessary measures to provide access to medicine at affordable prices and to promote public health and nutrition.

32. We emphasize the importance of empowering women in social and economic development by reinforcing their capacity in the domains of education and training, by developing revenue-generating activities through facilitating access to credit, and by ensuring their participation in the political and economic life of African countries.

33. We believe that the empowerment of women and improving their health status should be prioritized, because they have key roles in all societies with respect to healthy living conditions.

34. We emphasize that education and information dissemination are major priorities in respect of ensuring improvements in the quality of life, the eradication of poverty and placing the African continent on a path of sustainable development and growth. Human resources development and capacity-building are crucial elements of sustainable development and it is important to develop clear policies in relation to training, education and research in the region. It is essential to (a) upgrade the quality of education to enable response to the challenges of the market; (b) strengthen capacity-building as a critical component of human resource development; (c) launch literacy campaigns to cut the proportion of illiteracy to 50 per cent of the current figures, with major emphasis on women; (d) strengthen and, if need be, establish well-equipped and strongly supported specialized research and technology development institutes; and

(e) promote the role of women in strategies for investing in people. In this regard, we call upon the international community to assist African countries in their need to respond to new and longer-term challenges by making education and training relevant to national needs in the context of a globalizing world. Emphasis must be placed on improving the access of girls to education and training, with the aim of enabling them to attain parity with boys.

Youth

35. We recognize that participation by young people in sustainable development is the foundation of the success of the strategy to combat poverty for the sake of the future of Africa. Young people make up half the population of Africa. However, this category of dynamic actors is characterized by an insufficiency of development factors such as education, training, health protection, professional employment, and communication. There is therefore a need, in the framework of sustainable human development, to ensure the strengthening of the skills of young people in all areas.

Trade and market access

36. We emphasize the need for the multilateral trading system to ensure that issues of development are addressed adequately and decisively. For the global economy to remain stable, there must be resource flows to developing countries, and World Trade Organization agreements can and should promote this through the following:

- Contributing to structural change in the location of production globally to enable developing countries, including least developed countries, to diversify their production and export in existing and potential areas of competitive advantage;
- Levelling the playing field by addressing concerns and imbalances in existing World Trade Organization agreements;
- Operationalizing, as a matter of priority, the special and differential treatment provisions in favour of developing countries, including providing assistance to developing countries in building their required capacities for the implementation of their commitments under various World Trade Organization agreements;

- Ensuring the universality of the World Trade Organization, as well as its transparent, non-discriminatory, equitable and predictable conduct of proceedings, and ensuring the full participation of developing countries in decision-making;
- Expediting the completion of the mandated negotiations on agriculture and services, without adding new issues, especially non-trade issues, to the agenda of multilateral negotiations.

37. We call upon developed countries to open their markets and eliminate subsidies on agriculture, textiles and other export products of interest to African countries so as to enable them to reach the poverty reduction target of the United Nations Millennium Declaration by 2015.

Financing for sustainable development

38. We note with concern that a major limitation in the implementation of Agenda 21 has been the lack of the necessary means of implementation, particularly as regards the financial commitments made in Rio. We therefore emphasize the importance of mobilizing in a coherent manner all available sources, including new and additional resources, for the financing of development, inter alia, domestic resources, foreign direct investment (FDI), debt relief and ODA. We note that the International Conference on Financing for Development, to be held in Mexico in March 2002, will consider in an integrated manner, among other items, all sources of financing for sustainable development.

Investment

39. We stress the need for increased FDI in African economies as an essential component of a sustainable long-term approach to poverty eradication. Developed countries should recognize African economic reforms towards macroeconomic stability and put adequate measures in place to mobilize more financial resources, especially private capital for African economies. Sustained efforts should be made to assist African countries in creating the necessary conditions for FDI, especially in infrastructure and production capacity.

40. We call upon the international community to support African countries in their efforts to enhance domestic investment through measures such as (a) increasing revenue mobilization, (b) reducing capital flight, (c) encouraging increased inflows of

remittances from Africans living abroad and (d) improving public efficiency to increase national saving and investment.

Debt relief

41. We call for existing debt-relief measures for African countries to be evaluated appropriately, taking into account the special needs of Africa, especially those countries that have high debt burdens, including heavily indebted poor countries (HIPC). The cancellation of debt for the poorest countries should be considered so as to allow them to concentrate their resources on poverty reduction programmes. While it is recognized that the enhanced HIPC Initiative will provide relief, it is at the same time imperative that African countries be assisted in finding a lasting exit from their external debt situations.

42. Furthermore, developed countries need to commit themselves to providing more meaningful market access to the products of heavily indebted poor countries to enable them to increase their export earnings and diversify their production and export bases, and they need to provide development assistance on highly concessional terms, in order to keep the debt situation sustainable and safeguard the benefits of HIPC relief. We call upon the international community to support the African initiative that seeks to secure a negotiated agreement, to provide further debt relief for countries participating in the initiative.

Increased official development assistance (ODA)

43. We urge that ODA to Africa should be increased and that developed countries should adhere to the United Nations target of 0.7 per cent of gross national product (GNP). ODA should be untied and supportive of recipient countries' objectives to enable them to take ownership of their development programmes. The New African Initiative calls for the reform of ODA to ensure that ODA flows are more effectively utilized.

Global Environment Facility (GEF)

44. We recognize the importance of GEF in financing sustainable development. In this connection, we call for an improvement in its operational procedures and project implementation, so as to make it more responsive to the needs of development in Africa, including financing the implementation of the United

Nations Convention to Combat Desertification and other multilateral environment agreements (MEAs). We call for a substantial increase in the resources of the GEF in the context of the ongoing third replenishment negotiations so as to enable it to allocate a greater share of its resources to Africa. We recognize the need to amend the GEF instrument and to review the issue of incremental cost and environmental issues of global concern during its second Assembly, to be held in China, in October 2002.

Infrastructure and sustainable human settlement

45. We affirm the importance of infrastructure development for Africa's continued socio-economic growth and development. We call upon the international community to assist African countries in their efforts to: improve access to and the affordability and reliability of infrastructure services; and attract investment in public transport and communication systems, ports, roads, schools and hospitals.

46. We reaffirm our commitment to implementing the Habitat Agenda⁶ and the outcome of the twenty-fifth special session of the General Assembly for an overall review and appraisal of the implementation of the outcome of the United Nations Conference on Human Settlements (Habitat II) and emphasize our full support for the two global campaigns on urban governance and secure tenure. We call upon the international community to mobilize the necessary resources for the implementation of the Habitat Agenda and the Declaration on Cities and Other Human Settlements in the New Millennium,⁷ adopted by the Assembly at its twenty-fifth special session, with respect to achieving sustainable human settlements in Africa.

Science and technology

47. We recognize that harnessing science and technology requires action in several areas, including adequate financing, promoting the culture of innovation and science in our societies and appropriately managing intellectual property rights to promote increased science and technology activities within African countries, while minimizing barriers to access to knowledge worldwide.

48. We therefore urge the international community to assist African countries in their efforts to gain access to new technologies, particularly information and

communication technologies (ICT), and to create conditions for the development of indigenous technologies that are important for enhancing economic development.

Desertification and land degradation

49. We recognize that the lack of opportunities for a proportion of the people, especially in rural areas, is at the root of poor environmental management which leads to environmental degradation, including desertification and land degradation. Consequently, we commit ourselves to increasing, with the support of our development partners, campaigns for environmental information, education and communication.

50. We further recognize that the majority of people in Africa directly depend on land resources for their livelihoods. To varying degrees, however, there exist poor land management practices and, in some countries, inappropriate land tenure systems. This leads to land degradation and non-optimal use of land. We therefore reaffirm the importance of a timely and effective implementation of the United Nations Convention to Combat Desertification in addressing the issue of poverty deriving from land degradation. In this regard, we invite the Summit to acknowledge the United Nations Convention to Combat Desertification as a sustainable development convention and to proclaim it as a prime tool in the eradication of poverty in Africa and in other regions with dry and arid lands.

51. Accordingly, we call for substantial and predictable financial resources to be made available for its implementation. We congratulate the GEF Council for its latest decision in this respect and invite its Assembly, scheduled to meet in Beijing shortly after the Summit, to open up the Facility so that it can become the financial mechanism of the United Nations Convention to Combat Desertification.

Coastal and marine environments

52. We observe that coastal communities and some national economies, particularly small island developing States, are highly dependent on their coastal and marine resources. The integrity of coasts and oceans is under threat from unsustainable development and over-exploitation. We note the impact of climate change on coastal zones and especially on small island developing States.

53. We call for the harmonization, coordination and compliance of regional and international laws and agreements related to the seas. We reiterate our support for the protection and development of marine and coastal environments and the revitalization of the Nairobi Convention for the Protection, Management and Development of the Marine and Coastal Environment of the Eastern African Region and the Abidjan Convention for Cooperation in the Protection and Development of the Marine and Coastal Environment of the West and Central African Region as the two vital instruments for their protection, management and development in Africa. We recognize that this requires technology for monitoring levels of fish stocks, guarding against illegal fishing and supporting the efforts of developing countries in the area of capacity-building. The Johannesburg Summit must incorporate the outcomes of the African process for the protection and development of the marine and coastal environment, including concrete projects, programmes, resources commitments and partnerships.

Biodiversity

54. We believe that the wealth of biological diversity, including marine biodiversity, found in the region is a major resource for Africa and most of our economies are highly dependent on this resource.

55. We note the scientific and economic opportunities attached to this source of wealth and the imperative of ensuring that these opportunities directly benefit the region. We commit ourselves to developing and implementing national legislation for the protection of the rights of local communities, farmers and breeders, for the regulation of access to biological resources, and for biosafety in line with the Organization of African Unity (OAU) Model Law on Community Rights and the Control of Access to Biological Resources.

56. We are convinced that wetlands are areas of high agricultural, fishery and forestry productivity and that they are currently subject to considerable pressure from man, and we commit ourselves, with the support of our development partners, to rehabilitating them.

Forests

57. We welcome the establishment of the United Nations Forum on Forests (UNFF), and emphasize that it should become not a forum for statements, but a vehicle for the full implementation of the International

Panel on Forests (IPF)/International Forum on Forests (IFF) proposals for action regarding the sustainable management of all types of forests, including addressing the special needs of low forest cover countries. To this effect, we call for the provision by the international community of the requisite financial resources and technology transfer to developing countries, particularly in Africa. We believe that any examination of the possibility of a legally binding instrument for forests is contingent upon the realization of the above measures. We look forward to the first UNFF ministerial segment, to be held in Costa Rica in March 2002.

58. We are convinced that bush fires contribute to the reduction of forest cover and nullify afforestation efforts. We recognize, therefore, the need to initiate a large-scale campaign to combat bush fires, and to do so with the support of the GEF and other funding agencies.

Mineral resources

59. We note that mining activities contribute significantly to the economic development of many economies in our continent. The benefits arising from mineral resources will depend on how countries in the region harmonize policies and regulations on agreed minimum levels, operational practices and information on mining, in order to assist in reducing risks, and on the development of an information and capacity development framework that can also benefit small-scale miners.

Climate change and atmosphere

60. We note with concern the current impacts and potential future impacts of climate change on Africa, including the constituent small island States, particularly sea-level rise and extreme weather events such as floods and droughts. We call upon the international community to finalize agreement on the Kyoto Protocol⁸ to the United Nations Framework Convention on Climate Change⁹ and to operationalize the Special Climate Change Fund for developing countries, as well as the special fund for the least developed countries.

Disaster prevention

61. We stress the need to reduce the vulnerability of our countries to natural disasters and, in particular,

drought and floods in Africa. The Summit should support the strengthening of Africa's institutional capacity for assessment, prevention, preparedness and management initiatives, the establishment of early warning systems, and the promotion of public involvement and information exchange. In particular, the Summit should call for the establishment of regional and subregional institutions and networks to support the above-mentioned initiatives.

Waste

62. We note that poor waste management is a core contributor to environmental degradation, health hazards, over-exploitation and depletion of scarce resources. We call upon the international community to support the efforts of the African countries to put in place the required funding and capacity to effectively manage non-hazardous waste.

63. Of critical importance for Africa is the question of the management, comprising generation, storage, transport and transboundary movement and disposal, of hazardous waste, including radioactive waste. We call upon the international community to fully implement the relevant international and regional conventions, taking into consideration Africa's needs.

64. We call upon the developed countries, in the framework of the implementation of international agreements, to take steps to counter the export of obsolete capital goods and equipment to the developing countries, to prevent Africa from becoming the Northern countries' dumping ground for these products.

Environmentally sound management of chemical products

65. In accordance with chapter 19 of Agenda 21, the Rotterdam Convention on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade and the Stockholm Convention on Persistent Organic Pollutants, African countries should be assisted and supported in the management of chemical products. The strengthening of the technical, financial, institutional and judicial capacities of African countries is necessary to ensure sustainable development in the agricultural and industrial sectors, which use these products, and to prevent cases of poisoning (endangering human health) and pollution and well-known nuisances.

Freshwater and sanitation

66. We observe that the majority of people in Africa still lack access to safe water and sanitation services. Consequently, the morbidity and mortality due to water-borne and water-related diseases are still very high. We emphasize that the international community should encourage cooperation among countries sharing a transboundary water resource, through the provision of financial resources and technology transfer to assist them in implementing regional cooperation projects and initiatives and in developing the quality and quantity of water resources so as to benefit all riparian States, including assisting African countries in protecting the quality of water.

67. The Summit should deliver a programme of action for the achievement of the target on access to water and sanitation services of the Millennium Assembly of the United Nations, and for the support of regional shared water initiatives.

Energy

68. We note that energy plays a critical role in facilitating development. We recognize that at least 80 per cent of the people in Africa are still dependent almost exclusively on traditional sources of energy. There is a need for access to affordable energy, especially in rural areas and for sustainable industrial development.

69. We call for support for research and development, and for clean energy technologies, efficiency of energy supply and usage, and affordable uptake of renewables. Furthermore, we call upon the Summit to deliver a deal that promotes global access to energy for sustainable development in a form that minimizes the impact on air quality.

70. We strongly call upon the Summit to revitalize the Programme of Action for the Sustainable Development of Small Island Developing States and to provide the necessary support for its effective and timely implementation.

Support for regional cooperation and economic integration

71. We strongly call upon the Summit to endorse the provision of urgent international support to the newly established African Union. We make this call in recognition of the fact that economic ties among the

members of the subregional or regional groupings prevent disputes and tensions between them from becoming conflicts, thereby ensuring the peace and stability necessary for sustainable development.

72. We recognize that still greater policy convergence and harmonization are required if these efforts are truly to gain momentum. In this connection, we call for support for specific activities at the regional level, including cooperative projects that link two or more countries in common economic enterprise zones, common infrastructure projects, and joint tourism efforts.

Governance

73. We believe that the democratization of international governance is essential to promoting and implementing sustainable development at all levels. In this connection, we urge the Summit to reach agreement on the need for an effective governance regime for sustainable development and consider that the international preparatory process should examine this critical issue.

74. We recognize that peace, security and stability are prerequisites of sustainable development in all countries and regions of the world. In that respect, the international community should provide resources and support for mechanisms developed by African States to prevent, manage and resolve conflicts, and to satisfy the needs of refugees and displaced people and their host countries.

75. We recognize the need for an effective international environmental governance regime. We note the ongoing process in this regard and expect that its outcome will lead to meeting this objective, and will ensure the effective participation of African and other developing countries. The Summit should call for a greatly strengthened United Nations Environment Programme with a financial base that is more sustainable and predictable.

Participation of stakeholders

76. We invite the organizers of all forthcoming intergovernmental meetings held in preparation for the Summit to ensure that the agendas and organizational modalities of such meetings provide for the timely and direct involvement of major groups and the consideration of their views and proposals in such a way as to enable them to contribute effectively to the

intergovernmental deliberations. In this connection, the Conference took note of the offer by the Senegalese delegation to host a youth forum in Dakar.

Johannesburg Vision

77. We call upon the Summit to agree on what we may call the "Johannesburg Vision": a practical expression of the political commitments made by the international community in the principles contained in the Rio Declaration on Environment and Development¹⁰ and Agenda 21, and in the United Nations Millennium Declaration. These commitments envisage a global consensus on the eradication of poverty and global inequality. The World Summit on Sustainable Development provides a unique platform for the realization of this vision and must adopt a results-oriented programme of action with clear time frames and specific targets. For the effective achievement of this programme of action, concrete global partnerships between Governments on the one hand, and between Governments, business and civil society on the other hand, are required. We believe that through these outcomes, the Summit will provide practical meaning for the achievement of the hopes of the African Century.
