## Annex: Income and Expenditure of United Nations Autonomous Research Inotitutee

### LIST OF ACRONYMS AND ABREVIATIONS

- ACC: Administrativo Committee on Coordination
- APDC: Asian and Pacific Development Centre
- CELADE: Latin American Demographic Centre
- **CEDEN:** Cuban Demographic Centre
- COPA: Crow-Organisational Programme Analysis
- CSDHA: Contra for Social Development and Humanitarian Affairs
- ICAP: Central American Institute for Public Administration
- **IDEP:** African Institute for Beonomic Development and Planning
- **ILPRS:** Latin American Inatituto for Economic and Social Planning
- INSTRAW: International Research and Training Institute for the Advancement of Women
- UNIDIR: United Nations Institute foe Disarmament Rescerch
- UNITAR: United Nations Institute for Training and Woaearch
- UNRISD: United Nations Research Instituto for Social Development
- UNSDRI: United Nations Social Defence Research Institute

#### I. I. OMMENDATIONS\*

1. Although th's report concentrates on the funding, budgeting and administration of the autonomous research institutes it also gives somo specifics on other matters without providing an in-depth analysis of each of there, e.g. on the lack of agreement on the defined rolo of an autonomoue research institute. The absence of uniform constitutionality among these institutes would seem to argue that the legal office of the United Rations should develop some typs of standarized format for the institutes to assist in harmonizing their terms of reference, their juridical status, their relations with United lotions bodies, their funding requirements, their financial directives, and their legislative responsibilities.

2. Concentration on funding, the essential element of the report, manifests the need for better financial management of these institutes through the creation of Reserve Funds equivalent to approximately 2.5 years of expenditure. These funds would serve as a cushion against irregular contribution pattern8 by denors especially in this period where expanded resource needs are coupled with an apparent malaire among contributors often termed "donor fatigue".

3. Several institutes are facing serious financial difficulties, in particular UNITAR, UNIDIR and IDEP. For UNITAR a basic and realistic approach must be designed to enable it to overcome its difficulties. UNIDIR, should be abaorbed within the operational capability of the Dopartment for Disarmament Affairs because of the similarities in the work undertaken and the close relationship it maintains with this Department. Contributions to IDEP were received this year covering SO per cent of its axpunditures, and if the necessary financial measures suggested to member states can be implemented this institution should have no further difficulties. On the other hand, if these practical approaches cannot be implemented, then the United Nations may have to redeploy and assign the functions of this institute to the pertinent Secretariat Units, if this is possible, or alternatively, resolve its dissolution in another manner.

#### Recommendation No. 1 - Need for financial stability

The institutes which have not yet done so ohould be requested to take immediate eteps to set up a reserve fund equivalent to at least 2.5 years of expenditures in order to create a cushion against irregular funding patterns.

#### Recommendation No. 2

As a general rule autonomous research institutes should be funded through voluntary contributions; however the regional institutes should be funded through regular assessed contributions of member governments. Except for the regional institutions, the United Nations pledging conferences should become the central funding mechanism for autonomous research institutions. UNDP funding should be limited to specific research nnd training projects and should be time-limited in nature. Support from the UN regular budget, where it exists, should be reconsidered and allowed only in exceptional cases for limited periods.

<sup>\*</sup> As an experiment, the Inspector has placed his recommendations at the beginning of the Report to accommodate busy delegates, particularly those from small delegations who often lack time to read JIU Reports in their entirety.

### Recomendation No. 3 - Income generating activities

Institutes which have not already done so should consider the possibility of offering income-generating activities to their users in order to strengthen their financial viability. These activities could comprise:

- advisory or concultancy services on a fee basis

- studies, training courses or other tasks undertaken on behalf of United Nations agencies or multi-bi trust fund agencies under United Nations system suspices.

#### <u>Recommendation No. 4 - UNITAR</u>

In order to alleviate UNITAR's long standing financial difficulties and in addition to the measures decided by the General Assembly in Resolution 41/172, the secretary-General and the Director: of the Institute should reconsider pursuing the practical approach enviseged in JIU/REP/79/18, paragraph 62 (d). This approach advocates, as an exceptional measure, that the United lotions University should cede a portion of its Endowment Fund, corresponding to the amount required to crier UNITAR expenditures for a period of three years. This amount would allow UNITAR to create a working reserve fund to cuohfon against irregular voluntary contributions.

#### Recommendation No. 5

It ohould be proposed to the UNDP Governing Council to have Member States of the African Region pay their assessed contributions to IDEP from their IPF's. If this should be approved and implemented the continuity of the Institute would be assured.

#### Recommendation No.6

Because of its continued financial difficulties and the consequent impairment of its role and its capability to produce more and better results, UNIDIR should cause to operate as an autonomous research institute and its functions ohould be given to the Department for Disarmament Affairs.

#### II. GENERAL OBSERVATIONS

in response to a suggestion from the Office of the 4. Under-Secretary-General for Administration and Ffnanco of the United Nations to examine the arrangements for autonomous research inflitutes vis...á-vis the United Nations, the present study proposes to take an independent look primarily into the administration and finances of these organizations. The suggestion to study this toric came at a time of considerable institutional \*\*malaise\*' concerning the status, functions and viability of some Unitod **Nations** autonomous research and training institutes, in particular, the financial difficulties confronting some institutions and tho fact that the very continuation of one or more of these was in Jeopardy. The report should be read in the context of the need for the United Nations to continue playing its role, as mandated by the Charter, to administer prudently the finances contributed by Member States and to perform its duties in the most economical and of ficient manner.

5. The Inspector felt that the present times of financial stringency and institutional uncertainty were particularly appropriate for a study which might roach some conclusions on the financial and **iministrative** viability of such institutions and make **some** recommendations aimed at **increasing** their cost-offoctivenoss. This exercise should also be seen against the background of the deepening of the United Nations financial crisis which has led thu **Secretary-General** to adopt far-reaching measures affecting the overall functioning of the **Organization**. Given these circumstances the Inspector decided to issue this study as a contribution for the consideration of the Secretary-Coneral in his pursuit of solutions to the United Nations financial prob lems.

6. The sequence followed in this presentation gives a brief insight as to the creation of the autonomous research institutes, a brief outline as to their mandates and other particulars related to their functions, outputs and other specific features such as the coordination and cooperation that exists between some of the institutes and the United Nations. The thrust of the report which relates to the budgeting, the finances, and the cash reserves is contained in the main body of the report and supported by the Annex.

7. It was considered by the Inspector that a detailed in-dapth ooviow of each institute would be subject matter for a separate report at a later date, if so wished by Member States. For the present, this report covers the following autonomous institutions: UNITAR, UNSDRL, UWRISD, UNIDIR, INSTRAW, CELADE, ILPES and IDEP. The total budget of these represented an annual amount of more than US\$ 16 million in 1986. These institutes all have formal link. either with the United Nations itself and/or with a Regional Economic Commission. The Asian and Pacific Development Centre (APDC) is not covered by the study since it has now become an intergovernmental organization in its own right and no longer has any formal reporting obligations to the United Nations (or ESCAP), although it still receives some UNDP funding.

8. The study does not cover the research and training institutes of the specialized agencies, nor the United Nations University, which was the subject of an earlier JIU report (JIU/REP/81/12), and its network of affiliated

1 . . .

institutos. Some of the points made in the report may however be relevant, <u>mutatis mutandis</u> to the situation of these institutions.

9. Provious JIU reports on gome of the institutions covered made some interesting observations, which are still pertinent today; of these we montion JIU/REP/79/3 on the Latin American Institute for Economic and Social Planning (ILPES); JIU/REP/79/13 on the African Training and Research Centre in Alministration for Development (CAFRAD); JIU/REP/79/18 on the United Nations Institute for Training and Research (UNITAR) and JIU/REP/80/10 on Assistance by the United Nations System to Regional Inter-Country Technical Cooperation Institutions.

The report on ILPES strassed the importance and the potential of its 10. contribution to the Buenos Aires Plan of Action on technical cooperation among developing countries, end the willingness of the countries in the region to reinforce the resources of the institution in providing the services needed to implement the plan and other related activities in the region, JIU/REP/79/18 on UNITAR dedicated a full chapter to its funding problems, Paragraph 62 of that roport stated: "Funding is obviously one of the principal problems of UNITAR. At present it is difficult to plan programmes and activities because of the uncertainty of the voluntary contributions. Undoubtedly, UNITAR, could be a more effective and efficient inotitution if this problem could be solved". The report further stated "If some type of formal arrangements could be made with the United Nations University in Tokyo, this would ease the problom somewhat". The Inspector's statement at that time still has validity today. JIU/REP/79/13 and JIU/REP/80/10 describe in detail the need to eetablioh Linkages between these auconomous institutions, the Regional Commission and donor agencies, for the basic purpose of gueranteeing their continuity; therefore in the f inal analysis, the fundamental problem of these institutions has been, end continues to be, their ability to overcome their funding prob lems.

11. In the course of the preparation of this study the Inopoctor visited several institutes (UNITAR, UNRISD, UNSDR1, UNIDIR, etc.) and held meetings with many concerned United Nations officials both at Haadquortero and in Geneva. In this connection he wishes to record his gratitude for the assistance received.

#### **III. DESCRIPTION**

#### A. <u>Origins</u>

12. The first autonomous research institutions to be authorized by the United Nations General Assembly were the two institutions in Latin America, the Latin American Demographic Centre (CELADE) in 1958 and the Latin American Institu's for Economic and Social Planning (ILPES) in 1962. Both were conceived as part of the Economic Commission for Latin America now (ECLAC) system and they still maintain close relationship with the Regional Economic Commiss ion. The African Institute for Economic Devolopment and Planning (IDRP), which is comparable to ILPES, wan established in 1962. As for the situation in the Asian region, the Asian and Pacific Development Centre (APDC) came into being in 1980 when the following regional training and research institutions were merged: the Asian and Pacific Development Institute, the Asian end Pacific Development Administration Centre, and the Asian and Pacific Centre for Women and Development, Nevertheless the APDC is now a separate intergovernmental body, which does not form part of the United Nations system, notwithstanding the fact that it submits an annual report to the Regional Beconomic Commission and the Executive Secretary participates in the meeting of its General Council. For the reasons mentioned above, the Asian and Pacific Development Control is not covered in this report.

13. The other United Nations autonomous institutes are gared more toward serving the international community as a whole. The coming into being of these institutes ranges from the early mixtles to the early eighties, (UNRISD, 1963; UNITAR, 1965; UNSDRI, '6.968 and wall of UNRISD, INSTRAW was established in 1974 but became fully operational only in 1982).

14. Table I summarizes the essential information on the mandates, functiono and organization of the institutions covered by this study

15. Some institutions have been engendered by the splintering of existing United lotions Departments. This is the case of UNRISD and UNSURI, which are out-crops of, and whoee activities are in general closely linked with those of the United Nations Department of International Economic and Social Affairs, the Crime Prevention and Criminal Justice Branch of the Centre for Social Development and Humanitarian Affairs (CSDHA) UNITAR, INSTRAW, UNIDIR end the regional institutions cannot be linked to any pre-existing unit.

16. The reasons given for setting up an autonomous research institution outside the Secretariat may be several such as the possibility of conducting more independent research or of tackling more sensitive or controversial topics than would otherwise have been possible under the Secretariat's umbrella; the availability of voluntary contributions tied to the setting up of an institute for specific research; the interests of the prospective host country of the institute, especially in cases where the host country is willing to be the major contributor.

17. At this point we do not wish to comment on the rationale of setting up autonomous institutions outside the main Departments but would simply point out hero that research is being conducted in numerous United Nations Departments - e.g. UNDTCD, DIESA, UNCTAD, etc. - where the need far an independent autonomous research structure does not seem to have been felt and whose functioning is within ths general framework of the respective departments. We would also like to refer the reader to tho recent. cross- organizational programme 'analysis entitled: \*\*Economic and social

<u>/...</u>

research and policy analysis i n the United Nations system" (document E/AC.51/1986/7) which was submitted to the 26th Session of CPC. This utudy stresses the fact that research is carried out by a large numbar of secretariat units and i assarch institutes in response to a wide variety of mandates throughout the system, but particularly in the United Nations itself. According to the etudy the neture, function and role of research need to be better dof ined. In its report to the Coneral Assembly (see document A.41/29 Chapter III) the Group of High Level Intergovernmental Experts (Group of 18) made similar comments, related specifically to the United Nations, on the Lock of coordination, risks of duplication in the Socretariat offices and units responsible for research and analyuie in social und economic matters and cal Led for increased responsiveness "to the changing realities at the global and regional levels".

18. Concorning the <u>quantum</u> of research outpute, the above-montioned study also aptly points out that "the total number of documents produced during a biennium, which reflects roughly the number of mandates and requests fur reports, is extremely large und could be estimated only very approximately. There is no central depository of research outputs or a central bibliographic system, and a multitude of catalogues, reports and lists of documents needed be uconnod. A conservative estimate is that, for the system au a whole, around 2,500 documents with economic and social content are produced during a biennium" (Paragraph 38 of the cited document).

### B. <u>Mendetee</u>

19. All institutes - with the notable exception of UNRISD - were set up following a decision by an intergovernmental body: the General Aucembly and ECOSOC in the case of the global institutes, the Regional Economic Commissions in the case of the regional institutes. UNRISD, which was the first global institute to be etablished, came into being through a Secretary-Ceneral's bulletin (ST/SGB) only. Although a background document had been submitted to on earlier session of the General Assembly, there was never a decison taken by the General Assembly on the creation of this institution.

20. The terms of reference, statutes, or description of mandates of the institutions are either included in the resolutions of the inter povernmental bodies which set there up or simply in the ST/SCB (UNRISD, UNSDRI). UNITAR, which is a "United Nations agency" rather then on autonomous institute, was set up following a General Assembly resolution and its Statute is consigned in a separate document. UNITAR's status is semewhat different from the other autonomous institutions as it is the only Institute which hau full membership in the Administrative Community on Coordination (ACC).

21. By and large the mandates of these institutes have not undergone much change over the years except for APUC which is now no longer pert of the system ond UNIDIR which was first set up within the framework of UNITAR but became independent in 1984. Some of the mandates appear vaguely worded especially those of UNSURI, although this vagueness is not considered an impediment in the implementation of their work programme. The Inspector does however believe that there might be some edvantage in undertaking a review of the terms of reference of the Institutes with a view to their possible harmonization. (See also paragraph 23 below).

Contributions from African Covernments (1/4) and UEDP and other voluntary sources (3/4).	6 P (WHOP fin.) and 47 G8 in 1965.

Б

### C. <u>Governing Bodics</u>

22, Considerable divorsity exists also with roopect to the arrangements for the Governing Bodies of the Institutes. Some have a relatively formal Board or Council with specific reporting procedures to ECOSOC and/or the General Assembly (UNITAR, UNRISD, INSTRAW) and with well-defined provisions for the nomination or election of the members of these Boards. Othere, UNIDIR and UNSDRI in perticular, hevo much looser arrangements. UNIDIR works in close contact with the United Nations Department for Disarmament Af fairs, with the Secretariat General's Advisory Board on Disarmament Studies acting as Board of Trustees to the Institute (the Advisory Board is composed of 24 personalities appointed by the Secretary-General). The functiona of the Advisory Board however extend beyond the activities of UNIDIR.

23. In the case of UNSDRI, there is at present an Ad Hoc Advisory Oroup on the UNSDRI work programme whose members are appointed by the Secretary-Goneral. As montioned above, UNSDRI doeo not have a formal statute, The Inspector feels that it needs a fixed eet of guidelines to formalize its existence. Moreover there Fe no reference to the Advisory Qroup role in the ST/SGB document which established the Institute. The lack of a proper Governing body and the loosupage of the present reporting arrangements are a source of problems for UNSDRI in that the Seccetariet Unit which relates to UNSDRI. CSDKA - comments on the work programme of the Institute after it has been endorsed by the <u>Ad Hoc</u> Advisory Group rather then before. Discussions are et present underway botween UNSDRI, DIESA and CSDHA on the drafting of a Statute with clearer lines of communication to assure a structured base of administrative responsibility; this draft Statute will be submitted to ECOSOC through the Committee on Crime Prevention end Control. The Inspector suggests et this juncture that something along the lines of INSTRAW would be adequate. In order to guarantee the technical competence of Board members, it would be preferable that the members be proposed by the Secretary-General (in consultation with the Director of UNSDRI) to ECOSOC and ratified by this United Nations organ.

The three regional institutes are constitutionally linked to their 24. respective regional economic commissions. The two Latin American Institutes seem however to enjoy a greater degree of autonomy from their parent body especially in financial terms since they are increasingly funded through assessed contributions of the member states participating in the institutions. In addition, while IDEP has a Governing Council which is chaired ax officio by the Executive Secretory of ECA, CELADE and especially ILPES have some features which tend to make them comparable to intergovernmental organizations: the institutional framework of CELADE has evolved from a regional project financed by UWDP end UNFPA to en autonomous institution with its own identity which is pert of the ECLAC system. ILPES. which is also part of the ECLAČ system, hao the dual characteristic of a permanent regional body of the United Nations and at the same time an intergovernmental body of the countries of the region. The Conference of Hinistors or Heads of National Planning Bodies are the Institute's supremo body in its capacity as an Intergovernmental agency. The Technical Committee of the Institute (end the technical sub-committee) provides it with global orientation end more routine supervision of the implementation of its work programme. The competent United Nations Secretariat Unite however exercise full control over the administrative end financial management of the Institute.

### D. <u>Activities</u>

25. All the Institutes except one - IDEP - are primarily involved in research activities. Most Institutes are involved to some degree in training, whether through the provision of formal courses, or through fellowships awarded to resident trainees, IDEP's main task is training and ilmited research is undertaken to complement training activities. UNITAR conducts both training and research. UNSDRI and UNRISD are basically research-oriented, training being only an indirect function. All institutes prepare and disseminate documentation on specific subjects in the form of official publications (i.e. brochures or books) which are the end products of orig nal research or of seminars, conferences, etc. conducted under the auspices of the Institute, or less form81 issuances such as training materials, newsletters, etc. A few institutes (UNSDRI, INSTRAW) maintain a specialized library open to outside scholars,

26. Some institutes have assumed special tasks which should be highlighted: for example, UNITAR is the only institution which provides training services to the United Nations community, i.e. to junior diplomats, government officials from both developed and developing countries, newly appointed international civil corvants, to the United Nations and its specialized agencies and seminars for staff members and others. USSORI and INSTRAW are built around a network concept and maintain cooperative relationships with national and/or regional institutions with similar areas of activity.

27. ILPES, also has a opocial feoturo in the sense that it provides specielized advisory services to governments or local authorities in the region which ore income generating to the fnctitute. These services represent a substantial source of income and are generally goared to the identification and diagnosis of ohort and medium term plans, the formulation of sectorial policies and programmes, statistical analysis of economic data etc. At times the institute's services covar the evaluation of plane, strategies end policies for governments, The institute fully cooperates with other regional institutes such as the "Institute Centroomericene de Administración Pública (ICAP)" in Costa Rica.

28. The types of activity cerried out by the institutes can be briefly summarized as follows:

- CELADE's activities can be grouped into four distinct substantive areas:

a) Analysis of demographic trans. The basic work consists in the preparation of estimates, projections and studies on key demographic trends at the national or region81 levels. In addition to the bi-unnual Demographic Bulletin pumerous studies and country booklets are published each year aimed at the improvement of population data collection and estimation mothodo etc. In addition, specific studios, e.g. on family planning or infant mortality, are undertaken. Some 20 such reports are published each year.

b) Technical assistance missions and advisory services on population end dovelopment. Some 40 tochnical missions and about 10 to 15 technical documents are completed each year under this programme which is directed to assist the national planning and demographic institutions of the region. c) <u>Training and Teaching</u>. The main outputs are the MA in Demography and Social Population Studies (some 25 participants a year), but CELADE also provides a number of sub-regional and national courses and serinars (e.g. intensive courses in demography, courses on the integration of demographic variables into planning, etc.), and ad hoc seminars and fellowships, Altogether 222 trainoos participated in courses run by CELADE in 1985 and 233 in 1986.

d) <u>Population information dissemination</u>. The aim of this programme is to improve the capacity of the countries to utilize population data and documentation. The main outputs are the Latin American Population Documentation System (DOCPAL), the data processing and data bank and the issuance of technical bulleting end manuals. This institution also gives backstopping support to some national institutions such as the "Contro Demográfico de Cuba (CEDEM)".

29. <u>IDEP's</u> basic activity is the provision of a two-yoar cycle of programmes leading to the award of an MA in Economic Development and Planning to successful trainces (123 trainees in 1985). The programme is composed of :

- 1. The Nino-Month Basic Programme in Economic Development and Planning
- 2. Short-term (Two/Three-Month) Specialization Programmes in:
  - (a) Industrial Development. in Africa
  - (b) Energy, Environment and Development in Africa
  - (c) Population and Human Resources Development in Africa
  - (d) Agriculture and Rural Development in Africa.

3. The Six-Month Research Training Programme for the proparation of the Master of Arts thesis.

30. In addition to this basic course, IDEP organizes ad hoc seminars and workahopa at the request of governments or outside organizations (4 in 1986). The Instituto also carries out limited research activities. These seem ta be moving from research directly related to the training functions (e.g. curriculum development) or arising from conferences or seminars organized by the Institute, to the preparation and dissemination of mcre academic-type research outputs. Finally, IDEP also provides advisory sorvices on request e.g. consultancy services, and assistance in the preparation and running of training courses.

31. <u>ILPES</u> is a permanent regional body of the United Nations system and at the same time an intergovernmental body of Latin American and Caribbean countries. Under the "New Institutional Project'\* this second characteristic has been gaining increasing importance in the form of a larger amount of direct support to XLPES from the 37 member governments and a smaller amount of participation by UNDP, the contributions of which are declining year by year.

32. Throughout the 25 years of its existence, ILPES has been the mein regional agency for cooperation in matters pertaining to the planning and coordination of economic policy and has now become the main forum in which national planning institutions and agencies are able to moet at the

/...

multilateral laval to discuss the common problems they face in economic and social development questions, ILPES cooperative offerts with governments have concentrated on four main areas: oconomic policy and planning, public sector programming, regional and sectoral planning and pre-investment projects.

33. ILPES activities fall into the following categories:

(a) Direct and inter-institutional advisory assistance: Typically these consist of relatively small short-term consultancy missions to assist governments in specific areas such as the drawing up of projects and strategies, and the establishing of national projects systems. some 10 missions of this type are carried out each year.

(b) Training and working seminars: These include an annual post-graduate course on Development, Planning and Public policies (24 weeks; some 45 participants) and a number of advanced and special courses conducted both on an international and on a national basis. In addition various <u>ad hoc</u> workshops and sessions are also conducted. During the 1985-1986 period 17 international and 9 national courses were hold with 471 and 322 participants respectively. Five seminars attended by 233 participants were also conducted.

(c) Applied research in fields ouch as planning and economic policy, and models and projections according to the priorities defined by the biennial meetings of the heads of National Planning Organizations: some 20 research studies were issued during the 1985-86 period.

(d) stimulation of horizontal technical cooperation in the region where ILPES acts essentially as a catalyst.

(e) ILPES has a large publication programme: more than 50 publications were issued during 1985-86.

34. <u>INSTRAW</u> carries out research, training and dissemination of information activities aimed at ensuring the integration of women in the development process, particularly in developing countries. INSTRAW acts as a catolyot to promote the participation of women in all aspects of development: it operates through a network of co-operative arrangements with organizations within and outside the United Nations system, as well as by establishing national focal points throughout the world.

35. During its first biennium (1984-1985), the Institute proceeded to implement its mandate through two major programmes (a) research and training and (b) information, documentation and communication. By surveying the trends and undertaking activities in research, training and information mainly at the international level, the Institute addressed the latest development trends and the attendant problems faced by women.

/...

36. The Institute's activities in the current period focus more on the regional and national levels without losing track of trends at the international level .

37. More precisely, the Institute's research and training activities are aimed at strengthening the national capability of doveloping countries in the areas of research and training for the advancement of women by, e.g.:

- assisting in the development of appropriate policies and institutional frameworks;

- promoting the systematic consideration of issues related to women in the planning and programming process and in technical cooperation activities;

- enlarging the existing data bases end information system on women and development.

38. <u>INSTRAW's</u> recearch and training activities are closely interrelated and an efffort is being made to use the results of recearch programmes in the organization of training workshops, in the preparation of training modules, and in the fellowships programmes. In 1986, 15 seminars and workshops were conducted with the participation of 530 trainees. One fellowship and one internship were granted, and 48 research reports and publications wore issued.

39. UNIDIR has a very small etaff consisting of a Director, an Assistant Director and two general service staff. The Institute relies heavily on project-related short-term contracts in the implementation of its research programme. For each research project, of which there may be around 8-10 a year, individual experts or recearch organizations are employed to carry out the project, "Steering groups" composed of personalities known for their expertise may sometimes be constituted to assist in the carrying out of major studies. In addition, every year the Institute organizes 3-4 conferences and seminars, sometimes in cooperation with other institutes and universities, on subjec's related to the research programme of the Institute. There is also a small fellowship programme (3 per year).

40. <u>UNITAR</u> provides training of various types to government officials and diplomats, particularly from developing countries, working in fields related to United lotions system activities and to officials and experts of the United Nations system.

41. The Institute also conducte recearch and studies related to the functione and objectives of the United Nations, giving appropriate priority to the requirements of the Secretary-General of the United Nations and of other United lotions organs and the specialized agencies.

42. The main training activities include the following:

(a) training for international cooperation and multilateral diplomacy, which concentrates on training in multilateral diplomacy for members of Permanent Missions to the United Nations in New York and Geneva;

- training for othor governmental officials involved in international cooperation, particularly training in international law, in multilateral diplomacy and in international negotiations;

- advisory assistance to diplomatic training institutions in developing countries;

- training for official8 end experts of the United Nations system.

(b) training for economic and social development, which emphasizes particularly the training of trainers and concentrates on:

- training for development managers;

- training in the modernization of public edministration, particularly in least developed countries;

- training in the management of public enterprises;

- training for finance management.

43. Research activities focus on the following priority areas:

(a) Research on the United Nations and on iooueo of concern to it, particularly research on peace and occurfty issues, research on economic and social development issues, end research on institutional iooueo concerning the adequacy of the United Nations system to achieve its objectivea.

(b) Research on the future of the main developing regions of the world, in turns of challenges faced by these regions and the adequacy of policies being implemented or contemplated in response to those challenges. In this context, UNITAR operates a research office in Santiago, Chile, which focuses on research on the future of Latin America.

(c) Research on energy and natural resources iooueo which led the Inotitute to establish the UNITAR/UNDP Information Centre for Heavy Crude and Tar Sends in 1981 in New York end the UNITAR/UNDP Centre for Small Energy Resources, in 1984 in Rome.

44. Because of the financial constraints affecting the General Fund of the Institute, both training and research activities have had to be reduced in recent years. similarly the staff of the Inotitute funded through the General Fund had to be cut from approximately 40 (including 14 professionals) in 1984, to about 20 (6 professionals) at the end of 1986.

45. <u>UNRISD's</u> mandate is to conduct recearch into problems and policies of social development. It does not have any specific training or educational responsibilities. The Inotitute concentrates its research on global questions that are of major concern to the United Nations and the international community and on what can be done practically at the local, national and international levels to speed up the achievement of United Nations development goals. UNRISD research is particularly focussed on the impact of development processes on different social groups and on the study of practical policy alternatives.

/...

46. UNRISD cooperates closely with national research institutions, especially in developing countries, and with other international and national organizations and agencies in carrying out its research. The Institute concentrates on new approaches to the analysis of **development** issues and to the collection and analysis of relevant data and the testing of their practical applicability and utility.

47. The 'institute currently carries out research in four major **interrelated areas**:

- Food systems and society
- Popular participation

- Improvement of socio-economic development data and of methods of analysis and monitoring

- Social process cf refugee integration.

48. The main outputs of the Institute are the **publication** of the results of research activities. Reports and **research** notes are **mainly published** by **UNRISD** itself. Some co-publications with commercial publishers or other research institution% have also been issued. In **1986**, some 15 reports and research notes were issued. **There** is **also** a small **fellowship programme**.

49. **UNSDRT's** basic mandate is to encourage, coordinate and carry-out research on the Phenomenon of adult criminality and juvenile delinquency, especially in the context of the development process. As such, it conducts research, issues reports and publications and **organizes** and supports field **studies**, in collaboration with the countries concerned and with a **network** of affiliated regional institutions **operating** in the social defenae area. **UNSDRI aims** to put at the disposal of policy makers the results of international expertise and research, through the dissemination of research **results** and the organisation of participation in international **workshops** and conferences.

50. Activities carried out **in recent** years have dealt in<u>ter **alia**</u> with drug abuse, juvenile social maladjustment in developing countries, the economic crisis and crime, **delays** in the administration of justice, kidnapping. **The** Institute focuses on two **distinct** types of activities:

- the promotion, co-ordination and conduct of **comparative**, cross-cultural research at the inter-regional level, with particular emphasis on action-oriented research and the needs of the developing countries; and

- the provision of technical support and the conduct of field activities primarily in developing countries in response to specific **country** priorities and needs.

51. In addition to its various research and **studies**, the **Institute's** activities include **information**, documentation **and library** services. **UNSDRI** also publishes a World Directory of Criminological Institutes and **some** 2-3 publications per year. The work programme, and the Institute's **activities** in general are monitored and evaluated on a regular'basis by the <u>ad hoc</u> Advisory Group on **UNSDRI** work **Programme** and **Direc'ions** and by the Centre for Social and humanitarian Affairs (CSDHA). The Institute prepares its work programme taking into account the short and **medium-term** plans of the Crime Prevention and Criminal Justice Branch, CSDHA and in consultation with that **Unit**.

1. . .

### E. <u>Co-operation among institutes</u>

Since 1966, meetings of the directors of United Watione Institutes for 52. Training, Research and Planning have been hold annually on the proposal of the United Nations Secretary-General as Chairman of the Administrative Committee The directors of these institutes were then invited to meet on Co-ordination. "with a view to studying mothods of furthering co-operation among their organizat jons" in an informal and frank atmosphere. The Economic and Social Council in Resolutions 1138 (XLI) and 1175 (XLI) had stressed the importance of co ordinating programmes and activities among these institutions; and between them, on the one hand, and' the United Watlons and other agencies on the other. At the first annual meeting, hold in Geneva, various institutional and operational arrangement8 were discussed. The Executive Director of UWITAR was elected Chairman an' UWITAR was requested to assume responsibility of the Secretariat of future annual meetings. Wo official resolution or decision was taken at that time. Nevertheless it was agreed that the Chairman may, however, report to the Administrative Committee on Co-ordination as appropriate on the discussions held and in some cases undertake ingu ies at the request of the other directors.

- 53. The following institutes normally attend these mostings:
  - Economic Development Institute of the World Bank (EDI), Washington, D.C.

.ntornational Centre for Advanced Technical and Vocational Training (ILO) Turin

International Institute for Educational Planning (IIEP), Paris International Institute for Labour Studies (IILS), Geneva International Monetary Fund Institute, Washington, D.C. United Wationo Institute for Disarmament Research (UNIDIR), Geneva

- United Watione Institute for Training and Research (UNITAR), Wew York International Research and Training Institute for the Advancement of Women (INSTRAW), Santo Domingo
- United Wationo Research Institute for Social Development (UNRISD), Geneva
- United Wationo Social Defence Research Institute (UNSDRI), Rome
- African Institute for Economic Development and Planning (IDEP), Dakar
- Asian end Pacific Development Centre (APDC), Kusla Lumpur
- Latin American Institute for Economic and Social Planning (ILPES), Santiago.

54. In addition, the following United Watlons departments and programmes are regularly invited to attend the meeting: The United Nations Department of International Economic and Social Affairs, the United Watione Department of Technical Co-operation for Development and the United Nations Development Programme. Other Unitel Wationo and non-United Wations organizations are regularly invited to attend the meeting as observers. These include the United Nations Industrial "Jvelopment Organization, the Unite6 Watione Institute for Nanibia, the United Nations University, the CCAQ Sub-Committee on Statr Training, the Commonwealth Secretariat and the Development Centre of the Organisation for Economic Co-operation and Vevelopment (OECD).

Since its inception i n 1966, the Annual Meeting of Directors of United 55. Nations Institutes for Training, Research and Planning has been held in Geneva, under the chairmanship of the Executive Director of UNITAR. Each vear, one or two main themes of current interest are discussed in an informal atmosphere with sharing of views and ideas rather than presenting statements of position. Discussions have included such topics as the evaluation of training, publications policies, training and research methods, new training technologies, the staffing and f inancing of the institutes, the creation of new United Nations organizations and their relationship to the institutos, and ways of assisting training and research institutions in developing countries. In addition, every meeting includes an agenda item allowing for an in-depth exchange of information on now developments in the respective institutions. These exchanges have enabled the directors to benefit from each other's experiences, to establish mutual links, to organize joint and complementary activities, to exchange training materials and publications and to be made aware of activities undertaken by similar inotitution oat • ap outeido the United Nations system. It chould be mentioned that because of UNITAR's financial crisis, it was not possible to hold the meeting schodulod for Summor 1986.

56. The Li spector considers the issue of cooperation and coordination to be of considerable importance especially in view of the fact that on the one hand the majority of autonomous research inetbuteo are small and on the other many units scattered across the United Nations Secretariat are also involved in research. The Pnspoctor concurs on this point with the already mentioned COPA on research which states in paragraph 34 that: "This fragmentation in the organization of research further attests to the ambiguities that attach to the legitimacy and rolo of research in a number of organizations of the United Nations system".

57. In order to clarify this role, more attention should be devoted to issues of co-operation and co-ordination between individual institutes, between the institutes and Secretariat Units where research is undertaken and with the United Nations University. The COPA on this point concludes with a view to which we fully subscribe:

"The outonomouo research institutions of the United Nations system were created to provide new insights into policy issues and to work on problems requiring a long-term basic research of fort. A closer volationship, at all levels, should be established between these inetitutione and the research units of the organizations of the system. The reports on economic and social issues submitted to intergovernmental bodies should reflect the work of the research institutes. There are currently simple but basic questions of flows of information that romain to be solved. Also, while respecting the autonomy of the United Nations University and the research institutes, ways could be found to relate their programmes of work to a central agenda for research and research priorities in the United Nations system" (paragraph 67).

## F. Budgot and Financo 1/

58. The main focus of our study is contained in this section. Table I shows that in terms of annual expenditure the largest institute is UNITAR (with a budget of US\$ 4.7 million in 1986) followed by tha two Latin American regional institutes - each with a budget above US\$ 3 million, und by INSTRAW (US\$ 2.9 million). The smallest are UNSUR1 ond UNIDIR - both close to US\$ 0.5 million. UNITAR's General Fund budget was in the US\$ 3 million range in 1983 but had to be drastically reduced as a result of the funding crisis. Due to the present unotubfo financial situation and Euture uncertainty some institutes are in the process of setting up a financial reserve to cushion them against shortfalls in resources. UNSDRT, for example, has now succeeded in setting up reserves representing approximately two years of activity of thu institutes. INSTRAW is also pursuing the same policy with favourable results.

Au u genoral rulo, tha autonomous research institutions are financed 59. from voluntary contributions which are oither tha result of plodges made mostly at the United Nations plodging conferences or on the basis of contributions from UNDP in the form of funding for specific projects or in the form of bilatoral special purpose grants for an activity which is of particular interest to thu denor. There are, however, several exceptions to this general pattorn. The most poculiar formula is tha one applicable to according to its utatuto a contribution from the United Nations UNIDIR: regular budget "may" be provided but must not exceed one-half of the assured income of the Institute. The Latin American regional institutes also received some contributions from the United lotions regular budget (1/6th in the case of CELADE and about 1/4th in the case of ILPES). ILPES and IDEP are partly financed through assessed regular contributions from their member Governments. Although this is functioning relatively smoothly in the case of ILPES, IDEP is experiencing increasingly serious difficulties i n maintaining Government contributions at the expected level. According to a decision of ths ECA Conference of Ministers (433 (XVII)), US\$ 1.6 million should be collected annually. However, In recent years, contributions from Governments huvo actually declined from \$600,000 in 1979 to \$255,000 in 1985, thus increasing the dependency of ths Institute on UNDP funding. The Inspector recognizes that, unlike CELADE and TLPES. TDEP has never received United Nat ions regular budget funding. Recent attempts to secure u limited number of' regular budget posts - the ECA Conference of Ministers had recommended 9, reduced to 4 by ECOSOC regolution 1985/62 - have not met with General Assembly approval. Unless the financial viability of IDEP can be secured, the Inspector foels that serious consideration will have to be given to its continuation. A form of solution to the problem, could be to propose to the Governing Council of UNDP to make contributions mandetory for each of that African countries through the utilization of their IPF's for the corresponding assessment quota.

<sup>1/</sup> The Annex provides more detailed information on the income and expenditures of the institutes covered in this report.

60. In exceptional circumstances the United Nations has had to provide direct wupport in the form of leans or grants to the budget of some institutes (UNRISD, and more recantly UNITAR) which were experiencing financial difficulties. In addition, the United Nations provides rent-free premises, house-keeping and reproduction facilities to some institutes (UNRISD, UNIDIR, ILPES). Other institutes are provided with free premises and cortain services by the host governments (UNSDRI, INSTRAW), UNITAR has its own premises.

61. The limited involvement of United Nations regular budget resourcer in the financing of the Institutes and the aborted attempts to increase the levels of such financing naturally have cast a shade of uncertainty at one time e onother on the financing prospects of several institutes. UNRISD experienced a crisis in the early eighties and UNITAR is hard hit at present. UNSDRI is very much dependent on the contribution of its hest government and UNIDIR Pc similarly dependent on the contributions of 1 or 2 major denors. IDEP, since its inception 25 years ago, has been able to function largely because of regular UNDP contributions to its budget. The financial situation of the two Latin American Fnwtitutes, in contrast, appears to be much sounder.

62. The difficulties of UNITAR have been the subject of conaiderable debate in the General Assembly and within the United Nations Secretariat. Although the Assembly has periodically reaf firmed the continuing importance and relevance of the mandete of the Inwtituta (see General Assambly resolutions 39/177, 40/214 and 41/172) its very existence is still in Jeopardy, primarily becauwe it has ceased to attract sufficient voluntary contributions to maintain it au a viable entity. On the basis of resolution 41/172 a furthur attempt is currently being made to re-structure the Inwtitute.

63, The Executive Director of UNITAR brfofod the Inspector on a financial Plan, which consists of the disposal of UNITAR's premises under advontageoue conditions; through this exercise the Institute should get immediate additional resources, and a botter guarantee of sound funding. If this of fort doow not materialize and if the other measures reconvended in resolution 41/172 are not successful in setting UNITAR on a sounder footing, inevitably the Secretary General, with the concurrence of the General Awwombly, will have to phase out the Institute distributing its functions to pertinent departmentw in the United Nations and redeploying the personnel in the manner he wees fit.
