CONFÉRENCE DES PARTIES

RAPPORT DE LA ONZIÈME SESSION DE LA CONFÉRENCE DES PARTIES TENUE À MONTRÉAL DU 28 NOVEMBRE AU 10 DÉCEMBRE 2004

Additif

Deuxième partie: Mesures prises par la Conférence des Parties à sa onzième session

TABLE DES MATIÈRES

Décisions adoptées par la Conférence des Parties

	<i>Page</i>
<i>Décision</i>	
14/CP.11 Tableaux du cadre commun de présentation pour le secteur de l'utilisation des terres, du changement d'affectation des terres et de la foresterie	2
15/CP.11 Questions relatives aux ajustements à opérer au titre du paragraphes 2 de l'article 5 du Protocole de Kyoto.....	43

Décision 14/CP.11

Tableaux du cadre commun de présentation pour le secteur de l'utilisation des terres, du changement d'affectation des terres et de la foresterie

La Conférence des Parties,

Rappelant le paragraphe 1 de l'article 4, le paragraphe 2 de l'article 10 et le paragraphe 1 de l'article 12 de la Convention,

Rappelant également ses décisions 18/CP.8 et 13/CP.9,

1. *Adopte* les tableaux du cadre commun de présentation et les notes y afférentes, qui sont reproduits à l'annexe de la présente décision, aux fins de la communication des données d'inventaire annuelles pour le secteur de l'utilisation des terres, du changement d'affectation des terres et de la foresterie;

2. *Décide* que chaque Partie visée à l'annexe I de la Convention utilisera ces tableaux aux fins de la communication des données d'inventaire à présenter en 2007 et pour les années ultérieures;

3. *Prie* le secrétariat d'incorporer ces tableaux et les notes y afférentes ainsi que les modifications techniques découlant de la décision 13/CP.9 dans les «Directives pour l'établissement des communications nationales des Parties visées à l'annexe I de la Convention, première partie: Directives FCCC pour la notification des inventaires annuels», qui ont été adoptées par la décision 18/CP.8, et d'établir, avant la vingt-cinquième session de l'Organe subsidiaire de conseil scientifique et technologique (novembre 2006), un document unique contenant la mise à jour des directives FCCC pour la notification des inventaires annuels.

ANNEXE

Tableaux du cadre commun de présentation et les notes y afférentes

Notes concernant le cadre commun de présentation

1. Le cadre commun de présentation (CRF) fait partie intégrante du rapport national d'inventaire (RNI). Il a été conçu pour que les Parties visées à l'annexe I de la Convention (Parties visées à l'annexe I) communiquent les données chiffrées selon un mode de présentation type, et pour faciliter la comparaison des données d'inventaire des différentes Parties. Les détails concernant toute information non chiffrée devraient être fournis dans le RNI.
2. Les données présentées dans le CRF visent à rendre les inventaires plus comparables et plus transparents dans la mesure où elles facilitent, entre autres, la comparaison des données d'activité ainsi que des coefficients d'émission implicites (CEI) des coefficients de variation des stocks de carbone entre les différentes Parties visées à l'annexe I et qu'elles permettent de relever aisément les éventuelles inexactitudes, erreurs d'interprétation et omissions dans les inventaires.
3. Comme indiqué dans les directives¹, le CRF comprend, outre les tableaux récapitulatifs et les tableaux sectoriels qui figuraient dans la version révisée de 1996 des Lignes directrices du GIEC pour les inventaires nationaux de gaz à effet de serre (Lignes directrices révisées du GIEC (1996)), plusieurs nouveaux tableaux, dont des tableaux contenant les données de base pour les différents secteurs, qui ont été établis conformément aux Lignes directrices révisées du GIEC (1996) et au rapport du Groupe d'experts intergouvernemental sur l'évolution du climat (GIEC) sur les bonnes pratiques et la gestion des incertitudes dans les inventaires nationaux de gaz à effet de serre.
4. Certains des tableaux dans lesquels doivent être consignées les données de base pour les différents secteurs requièrent le calcul de CEI ou de coefficients de variation des stocks de carbone. Ces coefficients, qui correspondent aux rapports, calculés selon la méthode descendante, entre les émissions ou absorptions estimées et les données d'activité globales, sont demandés uniquement à des fins de comparaison. Il ne s'agira pas forcément des coefficients d'émission/d'absorption effectivement retenus au départ pour l'estimation des émissions, à moins que l'opération n'ait consisté en une simple multiplication à partir des données d'activité globales utilisées pour calculer le coefficient d'émission implicite ou le coefficient de variation des stocks de carbone.
5. Conformément aux Lignes directrices révisées du GIEC (1996), les données communiquées pour mémoire, comme les estimations des émissions provenant des combustibles de soude utilisés dans les transports maritimes et aériens internationaux, les émissions de CO₂ dues à la combustion de biomasse et les émissions provenant des opérations multilatérales devraient être consignées dans les tableaux appropriés, mais elles ne devraient pas être comptabilisées dans les totaux nationaux.

¹ Les notes concernant le cadre commun de présentation seront incorporées dans les «Directives pour l'établissement des communications nationales des Parties visées à l'annexe I de la Convention, première partie: Directives FCCC pour la notification des inventaires annuels» publiées dans le document FCCC/SBSTA/2004/8. Ce sont ces directives que désigne le mot «directives».

6. Les Parties visées à l'annexe I devraient préciser dans les cadres réservés à la documentation figurant au bas des tableaux les sections du RNI dans lesquelles seront fournis tous les détails sur tel ou tel secteur ou catégorie.

7. Les Parties visées à l'annexe I devraient remplir toutes les cases correspondant aux estimations des quantités émises ou absorbées, aux données d'activité et aux coefficients d'émission. Lorsqu'elles n'ont pas de données à consigner dans une case, elles devraient y porter l'une des mentions types présentées au paragraphe 28 des directives.

8. Dans les tableaux contenant les données de base pour les différents secteurs, sous la catégorie «Other» (Autres), une ligne a été laissée en blanc pour permettre aux Parties d'ajouter éventuellement des catégories qui leur sont propres. Ces catégories seront automatiquement reprises dans les tableaux sectoriels correspondants.

9. Les Parties visées à l'annexe I devraient remplir les cadres réservés aux informations complémentaires. Lorsque les informations demandées sont inappropriées en raison de la méthodologie utilisée, il faudrait porter dans les cases correspondantes la mention «SO» (sans objet).

10. Ni l'ordre des colonnes, lignes ou cases des tableaux, ni les mentions types qui y sont données, ne devraient être modifiés car cela compliquerait le dépouillement. Toute adjonction à la ventilation existante des catégories de sources et de puits devrait être indiquée, le cas échéant, sous «Other».

11. Pour simplifier la présentation des tableaux et bien mettre en évidence les données à consigner dans chacun d'eux, seules les cases que les Parties doivent remplir ont été laissées en blanc. Les cases qui doivent en principe être remplies au moyen du logiciel fourni par le secrétariat sont légèrement grisées. Cela dit, les Parties visées à l'annexe I qui choisissent de ne pas utiliser de logiciel pour compléter le CRF devraient également les remplir.

12. Comme dans la version actuelle du CRF, les cases qui ne sont pas censées être remplies apparaissent en grisé foncé.

13. Les augmentations et diminutions de carbone devraient être indiquées séparément dans les tableaux sectoriels contenant les données de base relatives au secteur de l'utilisation des terres, du changement d'affectation des terres et de la foresterie (UTCATF), sauf dans les cas où, en raison des méthodes utilisées, il est techniquement impossible de séparer les informations sur les augmentations et les diminutions.

14. Conformément au paragraphe 18 des présentes directives, chaque Partie visée à l'annexe I doit communiquer un inventaire national des émissions anthropiques par les sources et des absorptions anthropiques par les puits de tous les gaz à effet de serre non réglementés par le Protocole de Montréal.

15. Selon les Lignes directrices révisées du GIEC (1996), aux fins de la communication des données, les absorptions doivent toujours être indiquées en valeur négative (-) et les émissions, en valeur positive (+). Les variations nettes des stocks de carbone doivent être converties en équivalent-dioxyde de carbone en multipliant la valeur de C par 44/12; les absorptions nettes d'équivalent-CO₂ doivent être indiquées en valeur négative (-) et les émissions nettes d'équivalent-CO₂, en valeur positive (+).

Information items⁽⁷⁾						
Forest Land converted to other Land-Use Categories						
Grassland converted to other Land-Use Categories						

⁽¹⁾ According to the Revised 1996 IPCC Guidelines, for the purposes of reporting, the signs for removals are always negative (-) and for emissions positive (+).

⁽²⁾ For each land-use category and sub-category, this table sums net CO₂ emissions and removals shown in tables 5.A to 5.F, and the CO₂, CH₄ and N₂O emissions showing in tables 5(I) to 5(V).

⁽³⁾ Parties may decide not to prepare estimates for these categories contained in appendices 3a.3 and 3a.4 of the IPCC good practice guidance for LULUCF, although they may do so if they wish.

⁽⁴⁾ This land-use category is to allow the total of identified land area to match the national area.

⁽⁵⁾ The total for category 5.G Other includes items specified only under category 5.G in this table as well as sources and sinks specified in category 5.G in tables 5(I) to 5(V).

⁽⁶⁾ Parties may decide not to prepare estimates for this category contained in appendix 3a.1 of the IPCC good practice guidance for LULUCF, although they may do so if they wish and report in this row.

⁽⁷⁾ These items are listed for information only and will not be added to the totals, because they are already included in subcategories 5.A.2 to 5.F.2.

Documentation box:

- Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.
- If estimates are reported under 5.G Other, use this documentation box to provide information regarding activities covered under this category and to provide reference to the section in the NIR where background information can be found.

TABLE 5.A SECTORAL BACKGROUND DATA FOR LAND USE, LAND-USE CHANGE AND FORESTRY

Forest Land

(Sheet 1 of 1)

Year
Submission
Country

- ⁽¹⁾ Land categories may be further divided according to climate zone, management system, soil type, vegetation type, tree species, ecological zone or national land classification.
- ⁽²⁾ The total area of the subcategories, in accordance with the sub-division used, should be entered here. For lands converted to Forest Land report the cumulative area remaining in the category in the reporting year.
- ⁽³⁾ Carbon stock gains and losses should be listed separately except in cases where, due to the methods used, it is technically impossible to separate information on gains and losses.
- ⁽⁴⁾ The signs for estimates of gains in carbon stocks are positive (+) and of losses in carbon stocks are negative (-).
- ⁽⁵⁾ Implied carbon-stock-change factors for mineral soils are calculated by dividing the net C stock change estimate for mineral soil by the difference between the area and the area of organic soil.
- ⁽⁶⁾ When Parties are estimating fluxes for organic soils but cannot separate these fluxes from mineral soils, these fluxes should be reported under mineral soils.
- ⁽⁷⁾ The value reported for organic soils is estimated as a flux. For consistency with other entries in this column, these fluxes should be expressed in the unit required in this column, i.e. in Gg C.
- ⁽⁸⁾ According to the Revised 1996 IPCC Guidelines, for the purposes of reporting, the signs for removals are always negative (-) and for emissions positive (+). Net changes in carbon stocks are converted to CO₂ by multiplying C by 44/12 and changing the sign for net CO₂ removals to be negative (-) and for net CO₂ emissions to be positive (+). Note that carbon stock changes in a single pool are not necessarily equal to emissions or removals, because some carbon stock changes result from carbon transfers among pools rather than exchanges with the atmosphere.
- ⁽⁹⁾ Where Parties directly estimate emissions and removals rather than carbon stock changes, they may report emissions/removals directly in this column and use notation keys in the stock change columns.
- ⁽¹⁰⁾ A Party may report aggregate estimates for all conversions of land to forest land when data are not available to report them separately. A Party should specify in the documentation box which types of land conversion are included. Separate estimates for grassland conversion should be provided in table 5 as an information item.

Documentation box:

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

TABLE 5 (I) SECTORAL BACKGROUND DATA FOR LAND USE, LAND-USE CHANGE AND FORESTRY

Direct N₂O emissions from N fertilization⁽¹⁾ of Forest Land and Other
(Sheet 1 of 1)

Year
 Submission
 Country

GREENHOUSE GAS SOURCE AND SINK CATEGORIES	ACTIVITY DATA	IMPLIED EMISSION FACTORS	EMISSIONS ⁽⁴⁾
Land-Use Category ⁽²⁾	Total amount of fertilizer applied (Gg N/yr)	N ₂ O-N emissions per unit of fertilizer (kg N ₂ O-N/kg N) ⁽³⁾	N ₂ O (Gg)
Total for all Land Use Categories			
A. Forest Land⁽⁵⁾⁽⁶⁾			
1. Forest Land remaining Forest Land			
2. Land converted to Forest Land			
G. Other (please specify)			

⁽¹⁾ Direct N₂O emissions from fertilization are estimated using equations 3.2.17 and 3.2.18 of the IPCC good practice guidance for LULUCF based on the amounts of fertilizers applied to forest land.

⁽²⁾ N₂O emissions from N fertilization of cropland and grassland are reported in the Agriculture sector; therefore only Forest land is included in this table.

⁽³⁾ In the calculation of the implied emission factor, N₂O emissions are converted to N₂O-N by multiplying by 28/44.

⁽⁴⁾ Emissions are reported with a positive sign.

⁽⁵⁾ If a Party is not able to separate the fertilizer applied to forest land from that applied to agriculture, it may report all N₂O emissions from fertilization in the Agriculture sector. This should be explicitly indicated in the documentation box.

⁽⁶⁾ A Party may report aggregate estimates for all N fertilization on forest land in the category Forest Land remaining Forest Land when data are not available to report Forest Land remaining Forest Land and Land converted to Forest Land separately.

Documentation box:

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

TABLE 5 (II) SECTORAL BACKGROUND DATA FOR LAND USE, LAND-USE CHANGE AND FORESTRY

Year

Non-CO₂ emissions from drainage of soils and wetlands⁽¹⁾
(Sheet 1 of 1)

Submission
Country

GREENHOUSE GAS SOURCE AND SINK CATEGORIES		ACTIVITY DATA	IMPLIED EMISSION FACTORS		EMISSIONS ⁽⁵⁾	
Land-Use Category ⁽²⁾	Sub-division ⁽³⁾		Area (kha)	N ₂ O-N per area ⁽⁴⁾ (kg N ₂ O-N/ha)	CH ₄ per area (kg CH ₄ /ha)	N ₂ O (Gg)
Total all Land-Use Categories						
A. Forest Land⁽⁶⁾						
Organic Soil						
Mineral Soil						
D. Wetlands						
Peatland ⁽⁷⁾						
Flooded Lands ⁽⁷⁾						
G. Other (please specify)						

⁽¹⁾ Parties may decide not to prepare estimates for these categories contained in appendices 3a.2 and 3a.3 of the IPCC good practice guidance for LULUCF, although they may do so if they wish.

⁽²⁾ N₂O emissions from drained cropland and grassland soils are covered in the Agriculture tables of the CRF under Cultivation of Histosols.

⁽³⁾ A Party should report further disaggregations of drained soils corresponding to the methods used. Tier 1 disaggregates soils into "nutrient rich" and "nutrient poor" areas, whereas higher-tier methods can further disaggregate into different peatland types, soil fertility or tree species.

⁽⁴⁾ In the calculation of the implied emission factor, N₂O emissions are converted to N₂O-N by multiplying by 28/44.

⁽⁵⁾ Emissions are reported with a positive sign.

⁽⁶⁾ In table 5, these emissions will be added to 5.A.1 Forest Land remaining Forest Land.

⁽⁷⁾ In table 5, these emissions will be added to 5.D.2 Land converted to Wetlands.

Documentation box:

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

G. Other (please specify)			

⁽¹⁾ Methodologies for N₂O emissions from disturbance associated with land-use conversion are based on equations 3.3.14 and 3.3.15 of the IPCC good practice guidance for LULUCF. N₂O emissions from fertilization in the preceding land use and new land use should not be reported.

⁽²⁾ According to the IPCC good practice guidance for LULUCF, N₂O emissions from disturbance of soils are only relevant for land conversions to cropland. N₂O emissions from Cropland remaining Cropland are included in the Agriculture sector of the good practice guidance. The good practice guidance provides methodologies only for mineral soils.

⁽³⁾ In the calculation of the implied emission factor, N₂O emissions are converted to N₂O-N by multiplying by 28/44.

⁽⁴⁾ Emissions are reported with a positive sign.

⁽⁵⁾ Parties can separate between organic and mineral soils, if they have data available.

⁽⁶⁾ If activity data cannot be disaggregated to all initial land uses, Parties may report some initial land uses aggregated under Other Land converted to Cropland (indicate in the documentation box what this category includes).

⁽⁷⁾ Parties should avoid double counting with N₂O emissions from drainage and from cultivation of organic soils reported in Agriculture under Cultivation of Histosols.

Documentation box:

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF Sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

TABLE 5 (IV) SECTORAL BACKGROUND DATA FOR LAND USE, LAND-USE CHANGE AND FORESTRY

GREENHOUSE GAS SOURCE AND SINK CATEGORIES	ACTIVITY DATA	IMPLIED EMISSION FACTORS	EMISSIONS ⁽³⁾
Land-Use Category	Total amount of lime applied (Mg/yr)	$\text{CO}_2\text{-C}$ per unit of lime ⁽²⁾ (Mg $\text{CO}_2\text{-C}$ /Mg)	CO_2 (Gg)
Total all Land-Use Categories^{(4), (5), (6)}			
B. Cropland⁽⁶⁾⁽⁷⁾			
Limestone CaCO_3			
Dolomite $\text{CaMg}(\text{CO}_3)_2$			
C. Grassland⁽⁶⁾⁽⁸⁾			
Limestone CaCO_3			
Dolomite $\text{CaMg}(\text{CO}_3)_2$			
G. Other (please specify)⁽⁶⁾⁽⁹⁾			

⁽¹⁾ CO_2 emissions from agricultural lime application are addressed in equations 3.3.6 and 3.4.11 of the IPCC good practice guidance for LULUCF.⁽²⁾ The implied emission factor is expressed in unit of carbon to facilitate comparison with published emission factors.⁽³⁾ Emissions are reported with a positive sign.⁽⁴⁾ If Parties are not able to separate liming application for different land-use categories, they should include liming for all land-use categories in the category 5.G Other.⁽⁵⁾ Parties that are able to provide data for lime application to forest land should provide this information under 5.G Other and specify in the documentation box that forest land application is included in this category.⁽⁶⁾ A Party may report aggregate estimates for total lime applications when data are not available for limestone and dolomite.⁽⁷⁾ In table 5, these CO_2 emissions will be added to 5.B.1 Cropland remaining Cropland.⁽⁸⁾ In table 5, these CO_2 emissions will be added to 5.C.1 Grassland remaining Grassland.⁽⁹⁾ If a Party has data broken down to limestone and dolomite at national level, it can report these data under 5.G Other.**Documentation box:**

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

TABLE 5(V) SECTORAL BACKGROUND DATA FOR LAND USE, LAND-USE CHANGE AND FORESTRY

Country

D. Wetlands								
1. Wetlands remaining Wetlands ⁽⁸⁾								
<i>Controlled Burning</i>								
<i>Wildfires</i>								
2. Land converted to Wetlands								
<i>Controlled Burning</i>								
<i>Wildfires</i>								
2.1. Forest Land converted to Wetlands								
<i>Controlled Burning</i>								
<i>Wildfires</i>								
E. Settlements ⁽⁸⁾								
F. Other Land ⁽⁹⁾								
G. Other (please specify)								

⁽¹⁾ Methodological guidance on burning can be found in sections 3.2.1.4 and 3.4.1.3 of the IPCC good practice guidance for LULUCF.

⁽²⁾ Parties should report both controlled/prescribed burning and wildfires emissions, where appropriate, in a separate manner.

⁽³⁾ For each category activity data should be selected between area burned or biomass burned. Units for area will be ha and for biomass burned kg dm. The implied emission factor will refer to the selected activity data with an automatic change in the units.

⁽⁴⁾ If CO₂ emissions from biomass burning are not already included in tables 5.A - 5.F, they should be reported here. This should be clearly documented in the documentation box and in the NIR. Double counting should be avoided. Parties that include all carbon stock changes in the carbon stock tables (5.A, 5.B, 5.C, 5.D, 5.E and 5.F), should report IE (included elsewhere) in this column.

⁽⁵⁾ Emissions are reported with a positive sign.

⁽⁶⁾ In-situ above-ground woody biomass burning is reported here. Agricultural residue burning is reported in the Agriculture sector.

⁽⁷⁾ Includes only emissions from controlled biomass burning on grasslands outside the tropics (prescribed savanna burning is reported under the Agriculture sector).

⁽⁸⁾ Parties may decide not to prepare estimates for these categories contained in appendices 3a.2, 3a.3 and 3a.4 of the IPCC good practice guidance for LULUCF, although they may do so if they wish.

⁽⁹⁾ This land-use category is to allow the total of identified land area to match the national area.

Documentation box:

Parties should provide detailed explanations on the Land Use, Land-Use Change and Forestry sector in Chapter 7: Land Use, Land-Use Change and Forestry (CRF sector 5) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and/or further details are needed to understand the content of this table.

⁽¹⁾ Estimate the percentage change due to recalculation with respect to the previous submission (percentage change = $100 \times [(LS-PS)/PS]$, where LS = latest submission and PS = previous submission. All cases of recalculation of the estimate of the source/sink category should be addressed and explained in table 8(b).

⁽²⁾ Total emissions refer to total aggregate GHG emissions expressed in terms of CO₂ equivalent, excluding GHGs from the LULUCF sector. The impact of the recalculation on the total emissions is calculated as follows: impact of recalculation (%) = $100 \times [(source(LS) - source(PS))/total\ emissions(LS)]$, where LS = latest submission, PS = previous submission.

⁽³⁾ Total emissions refer to total aggregate GHG emissions expressed in terms of CO₂ equivalent, including GHGs from the LULUCF sector. The impact of the recalculation on the total emissions is calculated as follows: impact of recalculation (%) = $100 \times [(source(LS) - source(PS))/total\ emissions(LS)]$, where LS = latest submission, PS = previous submission.

⁽⁴⁾ Parties which previously reported CO₂ from soils in the Agriculture sector should note this in the NIR.

⁽⁵⁾ Net CO₂ emissions/removals to be reported.

Documentation box:

Parties should provide detailed information on recalculations in Chapter 10: Recalculations and Improvements, and in the relevant sections of Chapters 3 to 9 (see section 2.5 of each of Chapters 3 - 9) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and further details are needed to understand the content of this table.

TABLE 8(b) RECALCULATION - EXPLANATORY INFORMATION
(Sheet 1 of 1)

Year
 Submission
 Country

Specify the sector and source/sink category ⁽¹⁾ where changes in estimates have occurred:	GHG	RECALCULATION DUE TO			
		CHANGES IN:			Addition/removal/ reallocation of source/sink categories
		Methods ⁽²⁾	Emission factors ⁽²⁾	Activity data ⁽²⁾	

⁽¹⁾ Enter the identification code of the source/sink category (e.g. 1.B.1) in the first column and the name of the category (e.g. Fugitive Emissions from Solid Fuels) in the second column of the table. Note that the source categories entered in this table should match those used in table 8(a).

⁽²⁾ Explain changes in methods, emission factors and activity data that have resulted in recalculations of the estimate of the source/sink as indicated in table 8(a). Include changes in the assumptions and coefficients in the Methods column.

Documentation box:

Parties should provide the full information on recalculations in Chapter 10: Recalculations and Improvements, and in the relevant sections of Chapters 3 to 9 (see section 2.5 of each of Chapters 3 to 9) of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and further details are needed to understand the content of this table. References should point particularly to the sections of the NIR in which justifications of the changes as to improvements in the accuracy, completeness and consistency of the inventory are reported.

⁽¹⁾ The column "Base year" should be filled in only by those Parties with economies in transition that use a base year different from 1990 in accordance with the relevant decisions of the COP. For these Parties, this different base year is used to calculate the percentage change in the final column of this table.

⁽²⁾ Fill in net emissions/removals as reported in table Summary 1.A. For the purposes of reporting, the signs for removals are always negative (-) and for emissions positive (+).

⁽³⁾ Enter actual emissions estimates. If only potential emissions estimates are available, these should be reported in this table and an indication for this be provided in the documentation box. Only in these rows are the emissions expressed as CO₂ equivalent emissions.

⁽⁴⁾ In accordance with the UNFCCC reporting guidelines, HFC and PFC emissions should be reported for each relevant chemical. However, if it is not possible to report values for each chemical (i.e. mixtures, confidential data, lack of disaggregation), this row could be used for reporting aggregate figures for HFCs and PFCs, respectively. Note that the unit used for this row is Gg of CO₂ equivalent and that appropriate notation keys should be entered in the cells for the individual chemicals.

⁽⁵⁾ Includes net CO₂, CH₄ and N₂O from LULUCF.

Documentation box:

- Parties should provide detailed explanations on emissions trends in Chapter 2: Trends in Greenhouse Gas Emissions and, as appropriate, in the corresponding Chapters 3 - 9 of the NIR. Use this documentation box to provide references to relevant sections of the NIR if any additional information and further details are needed to understand the content of this table.
- Use the documentation box to provide explanations if potential emissions are reported.

Décision 15/CP.11

**Questions relatives aux ajustements à opérer au titre
du paragraphe 2 de l'article 5 du Protocole de Kyoto**

La Conférence des Parties,

Rappelant ses décisions 21/CP.7 et 20/CP.9,

Ayant examiné les recommandations pertinentes formulées par l'Organe subsidiaire de conseil scientifique et technologique au sujet de l'achèvement de l'élaboration des directives techniques concernant les ajustements,

1. *Décide d'incorporer les directives techniques concernant les méthodes de calcul des ajustements à opérer au titre du paragraphe 2 de l'article 5 du Protocole de Kyoto, qui figurent dans l'annexe de la présente décision, dans l'annexe du projet de décision -/CMP.1 (Art. 5.2) joint à la décision 21/CP.7¹;*

2. *Recommande que la Conférence des Parties agissant comme réunion des Parties au Protocole de Kyoto adopte, à sa première session, le projet de décision -/CMP.1 (*Questions relatives aux ajustements à opérer au titre du paragraphe 2 de l'article 5 du Protocole de Kyoto*), dont le texte est reproduit ci-après², à la place du projet de décision -/CMP.1 (*Directives techniques applicables aux méthodes de calcul des ajustements à opérer au titre du paragraphe 2 de l'article 5 du Protocole de Kyoto*) joint à la décision 20/CP.9.*

¹ L'annexe où figurent les directives techniques concernant les méthodes de calcul des ajustements à opérer au titre du paragraphe 2 de l'article 5 du Protocole de Kyoto n'est pas reproduite ici. Après l'adoption de la décision 15/CP.11, les directives techniques (initialement publiées dans le document FCCC/SBSTA/2005/4/Add.1) ont été incorporées dans l'annexe du projet de décision joint à la décision 21/CP.7. Ce projet de décision a été adopté par la COP/MOP en tant que décision 20/CMP.1 (FCCC/KP/CMP/2005/8/Add.3).

² Ce projet de décision a été adopté sans modification par la COP/MOP en tant que décision 21/CMP.1 (FCCC/KP/CMP/2005/8/Add.3).

Projet de décision -/CMP.1

Questions relatives aux ajustements à opérer au titre du paragraphe 2 de l'article 5 du Protocole de Kyoto

La Conférence des Parties agissant comme réunion des Parties au Protocole de Kyoto,

Ayant examiné ses décisions 21/CP.7, 23/CP.7, 20/CP.9 et -/CP.11 (Questions relatives aux ajustements à opérer au titre du paragraphe 2 de l'article 5 du Protocole de Kyoto),

1. *Demande que les examinateurs principaux, au sens des paragraphes 36 à 42 des lignes directrices pour l'examen prévu à l'article 8 du Protocole de Kyoto (décision 23/CP.7), s'attachent collectivement à examiner les points énumérés ci-après et à formuler des recommandations à leur sujet:*

- a) Les moyens de rendre plus cohérente l'application, par les équipes d'examen composées d'experts, des directives techniques, concernant les méthodes de calcul des ajustements à opérer au titre du paragraphe 2 de l'article 5 du Protocole de Kyoto, en particulier des démarches visant à garantir l'établissement d'estimations ajustées prudentes;
- b) L'élaboration et la mise à jour périodique des informations figurant dans les éléments destinés à faciliter l'examen des inventaires qui sont énumérés dans l'appendice I des directives techniques;
- c) Les moyens d'obtenir que les dispositions du paragraphe 57 des directives techniques soient appliquées selon une démarche commune et de limiter la marge d'appréciation consentie aux équipes d'examen composées d'experts à cet égard, si cela est jugé nécessaire;
- d) La mise à jour, s'il y a lieu, avant le début de la présentation des rapports pour la période d'engagement et par la suite, en tant que de besoin, des tableaux des facteurs correctifs à appliquer par mesure de prudence figurant à l'appendice III des directives techniques, y compris la construction et la structure fondamentales des fourchettes d'incertitude présentées dans ces tableaux;

2. *Prie le secrétariat d'incorporer toutes recommandations issues d'un examen collectif par les examinateurs principaux dans le rapport annuel, mentionné au paragraphe 40 des lignes directrices pour l'examen prévu à l'article 8 du Protocole de Kyoto, que ceux-ci soumettent à l'Organe subsidiaire de conseil scientifique et technologique aux fins d'examen;*

3. *Prie l'Organe subsidiaire de conseil scientifique et technologique de prendre, au terme de l'examen du rapport mentionné au paragraphe 2 ci-dessus, toutes mesures appropriées pour donner effet aux recommandations des examinateurs principaux mentionnées aux alinéas c et d du paragraphe 1 ci-dessus;*

4. *Prie le secrétariat de mettre à jour régulièrement, sur recommandation collective des examinateurs principaux, les informations figurant dans les éléments destinés à faciliter l'examen des inventaires qui sont énumérés à l'appendice I des directives techniques;*

5. *Prie le secrétariat d'archiver les informations sur les ajustements figurant dans les rapports d'examen, ainsi que toutes autres informations pertinentes, et de mettre ces informations à la disposition des équipes d'examen composées d'experts en veillant à ce qu'elles soient facilement accessibles;*

6. *Décide qu'en ce qui concerne les ajustements appliqués rétroactivement conformément au paragraphe 12 des directives techniques, seul l'ajustement appliqué pour l'année d'inventaire considérée est à prendre en considération pour déterminer s'il est satisfait au critère d'admissibilité énoncé à l'alinéa e du paragraphe 3 du projet de décision -/CMP.1 (*Lignes directrices pour la préparation des informations requises au titre de l'article 7 du Protocole de Kyoto*) joint à la décision 22/CP.7.*

*1^{re} séance plénière
28 novembre 2005*
