## I. Programme rationale

1. Venezuela is going through a process of change in its development, production and wealth distribution models involving the modification of its institutional and policy frameworks. In 2012, owing to this State restructuring, per capital GDP reached US\$12,766.72, making Venezuela an upper-middle-income country, with an economy that is 95 per cent dependent on the oil industry. The value chains associated with the oil industry are highly specialized and operate like enclave economies. For its part, the macroeconomic environment is characterized by significant challenges: inflation, prices and exchange rates.

2. During the period 2011-2013, the country showed posted sustained gains on the human development index (0.744 and 0.748, respectively) and positive economic growth rates of 4 per cent and 5 per cent between 2010 and 2012. The growth rate fell to 1.6 per cent in 2013. The inequality gap shrunk: the estimated Gini coefficient for 2009 was 0.4140, falling to 0.3902 in 2011. Absolute poverty also declined (about 2.3 per cent during the period 2009-2012), according to the National Statistics Institute (INE). It is estimated that 7 per cent of the total population lives in conditions of extreme poverty.

3. The report entitled “*Cumpliendo las Metas del Milenio 2012*” (Achieving the Millennium Goals 2012) (INE) notes that Venezuela has achieved the Millennium Development Goals of reducing extreme poverty and hunger, achieving universal primary education and universal access to treatment for HIV/AIDS, and ensuring potable water and sanitation coverage. The areas of maternal and child mortality and gender equality still pose challenges.

4. The State has established social programmes known as “missions” and “grand missions” as mechanisms for the distribution of oil revenue and the direct implementation of socioeconomic policies aimed at vulnerable groups.

5. According to the latest national census (2011), the country has a demographic dividend involving 66.6 per cent of its economically active population between the ages of 15 and 64, which is relevant when it comes to designing inclusive policies that encourage productive investment, promoting applied and technical education, and expanding opportunities, especially for young people and women.

6. The State intends to continue including women, especially indigenous women, in socio-productive activities; about 39 per cent of poor and rural households are headed by women.

7. Venezuela has made progress in environmental protection and comprehensive risk management. It has established a national strategy for biodiversity conservation and a national plan of action for the elaboration of a sustainable development model, and has submitted its first report on climate change. It has also strengthened its public institutions for the management of protected areas and sensitive productive ecosystems.

8. Access to basic services such as potable water, sanitation and electric energy has also improved. In 2012, more than 95 per cent of the population had access to potable water and sanitation, and 95 per cent had access to the national electrical system. For 2010, the installed generating capacity was 24,838 MW, while gross energy generated was 116,702 GWh, 65.7 per cent of which was from hydraulic sources. More than 9,000 communities in isolated, indigenous and border areas,

comprising about 1.2 million inhabitants, still do not have access to energy. Energy saving was promoted through policies designed to monitor and diversify the energy matrix through the installation of wind turbines and solar panels in isolated communities, as well as a rate scheme and grants for the most vulnerable people.

9. The statistics generation and microzoning studies system has been strengthened; the Comprehensive Management of Socio-natural and Technological Risks Act was passed in 2009 (still with no regulations); and the Office of the Deputy Minister for Risk Management and Emergency Preparedness was established.

10. With the technical assistance of UNDP, the Weapons and Ammunitions Control and Disarmament Act was designed and promulgated in the period 2011-2012. The State established the “Gran Misión A Toda Vida Venezuela” (Venezuela Full of Life grand mission) and the “Misión Patria Segura” (Safe Homeland mission). The aim of these public policies is to take a comprehensive approach to addressing these challenges and reducing the crime rate as well as crimes. These initiatives are meant to transform the criminal justice system and alternative dispute-resolution mechanisms so that the judicial system is more efficient. UNDP will promote a culture of peace and assist the country in advancing these policies and any others that might be developed in the future.

#### *Cooperation with UNDP*

11. In the period 2009-2013, the programme focused on four pillars: reduction of poverty and inequality and achievement of the Millennium Development Goals; partnerships for institution-building and promotion of inclusive participation; management of risks and natural disasters; and environmental protection and sustainable development.

12. UNDP supported national efforts to design policies aimed at socially vulnerable groups in the areas of social inclusion, public safety and gender equity.

13. The Weapons and Ammunitions Control and Disarmament Act and its enforcement by the National Bolivarian Police as well as the presentation and submission of periodic reports to various human rights bodies were undertaken through South-South cooperation.

14. UNDP undertook measures for the introduction and appropriation of the human development dimension in some State institutions and social and community organizations at the local level, establishing local human development agendas, institutional capacity diagnoses and Millennium Development Goals observatories at the local level, and promoting special microcredit for women in the 24 municipalities of the country.

15. The strengthening of public institutions was supported through the management of protected areas and sensitive productive ecosystems, the development of management tools and models for biodiversity-friendly productive diversification. The new initiatives include basic elements of environmental management, comprehensive risk management and full access to electrical energy to address poverty from the point of view of sustainable human development.

16. The child and juvenile orchestra programme was strengthened as a relevant mechanism for social inclusion through the study of music and the development of

values and a culture of peace; 270,000 boys and 230,000 girls, 76 per cent of who were between the ages of 15 and 24, participated in the programme.

17. Progress was made with respect to prevention and gender-based victim care, comprehensive care, establishment of the Bolivarian gender observatory, population surveys disaggregated by gender, and municipal budgets.

#### *Lessons learned*

18. During the planning processes, a more detailed and diversified analysis of the risks associated with the Programme should be conducted, taking into account dynamic institutional scenarios.

19. Simultaneous work with technical teams and institutional political leaders leads to a better ownership of the concepts of sustainable human development, service delivery, accountability and achievement of results.

20. In the previous cycle, the office approached the topic of comprehensive risk management in isolation, losing sight of the comprehensive nature of sustainable development policies.

21. There are still challenges in the management and analysis of socioeconomic data on issues concerning the environment, risk management and energy, and in the integration of public safety statistical systems.

22. The external evaluation of the previous programme shows the following difficulties: (i) low level of understanding of the role and significance of international cooperation by government entities, (ii) programme or project evaluation processes are perceived as assessment exercises, thereby losing the opportunity to learn and to take advantage of these strategic decision-making tools, (iii) disconnection of the comprehensive risk management, disaster management and development planning system.

23. UNDP enjoys a high level of trust which enables it to bring added value to its cooperation. It intends to provide timely and quality technical assistance and to exchange good practices, supporting Venezuela's positioning in the region in the area of South-South and triangular cooperation and strengthening partnerships with universities and other agencies of the United Nations system.

## **II. Programme priorities and partnerships**

24. The present country programme is aligned with the new cooperation framework signed with the Government of the Bolivarian Republic of Venezuela, the National Plan 2013-2019 and the new UNDP Strategic Plan 2014-2017. UNDP will provide technical assistance through successful, multidimensional capacity-building and knowledge-management initiatives and experiences. It will work closely with its principal national partners, such as the Ministry of Foreign Affairs, the National Statistics Institute (INE), the Ministry of the Environment, the Office of the Deputy Minister for Risk Management, the Ministry of the Interior, Justice and Peace, the Ministry for the Status of Women, and FUNDAMUSICAL. In that regard, it intends to improve the quality of its advisory services through a "knowledge and service centre", through which the office will provide technical assistance to national partners and promote research and its dissemination at the

national and subregional levels. The centre will allow UNDP to enhance the efficiency and efficacy of its operations and continue its innovation processes.

25. The Programme will improve the leveraging of the benefits of South-South and triangular cooperation and address common issues and challenges. This will help to build national capacities and transfer knowledge from and to Venezuela.

26. The Programme will focus on socially vulnerable groups and continue to strengthen the participation mechanisms established by the various government bodies. The goal will be to integrate thematic areas through a multidimensional approach in the development of sustainable livelihoods, access to and quality of basic services, and comprehensive risk management.

*Reducing extreme poverty, promoting sustainable livelihoods, building local capacities for the sustainable management of natural resources, biodiversity and sustainable energy*

27. For the adoption of sustainable livelihoods, assistance will be provided in (i) the integration into socio-productive activities of women heads of households living in conditions of extreme poverty or in indigenous or isolated communities, and young people; (ii) the strengthening of institutional capacities for the formulation, management and monitoring of poverty reduction and sustainable human development programmes and plans; (iii) the improvement of access by young people and children (mostly with limited resources) to social inclusion programmes that contribute to the reduction of inequalities; (iv) the provision of assistance in the process of growth and consolidation of the national electrical system in terms of installed capacity, coverage and diversification of the energy matrix, and the promotion of co-management arrangements for small and micro electricity generating stations in isolated communities; (v) the provision of technical assistance to ensure that public policies, especially those concerning the environment, comprehensive risk management, electric energy and citizen security, are geared towards the most vulnerable people, through the dissemination of disaggregated information; (vi) the design and implementation of national policies, legislation, strategies and plans related to conservation, climate change, land degradation and sustainable use of natural ecosystem resources.

28. South-South and triangular cooperation will be used to support the processes of strengthening the national electrical system and establishing co-management models for micro and mini electricity generating stations that have produced good results in the region. Efforts will be made to strengthen the support for programmes associated with the National Biodiversity Strategy, in respect of which good practices implemented in the region will be promoted.

*Ensuring access to and the quality of basic services and public goods*

29. Basic services will be addressed in a comprehensive manner through the following strategic lines: (i) capacity-building and promotion of knowledge management at the local level, access to information and enhanced efficiency of public institutions; (ii) comprehensive approach to efficient environmental management in urban and rural areas; (iii) assistance in strengthening the citizen security system; (iv) support in the implementation of a comprehensive policy for the consolidation of a culture of peace, from a preventive standpoint and focusing

on adolescents and young people; (v) assistance in the establishment of a national system for the comprehensive care of victims of violence as well as for prevention.

30. The establishment of “weapons-free municipalities”, which have been successfully implemented in El Salvador, will be promoted. Relations associated with capacity-building within the police force and gender-based policies within State security forces will be strengthened through the promotion of good practices implemented in the region. Access to sustainable energies in isolated communities of the national electrical system will be enhanced through a review and promotion of good practices implemented in the region.

*Promoting capacity-building for comprehensive risk management*

31. Work will be undertaken to build institutional capacities for the implementation of an integrated vision of the comprehensive management of socio-natural and technological risks.

*Partnerships to improve programme efficiency*

32. UNDP Venezuela will implement the “Delivering as one” approach, adjusted to the Venezuelan context, and promote the implementation of joint programmes with other agencies of the United Nations system in the areas of prevention of violence, local sustainable human development and community management of ecosystems with UNFPA, UNOPS, UNICEF, FAO, UNAIDS, UNESCO and UNHCR. It will also rely on the support of the global knowledge networks of UNDP and knowledge products developed by the regional centre and other country offices.

33. Partnerships will be established in the academic sector, which could include knowledge networks, to support national capacity-building processes. Specific projects will be developed with universities to strengthen their capacities and provide training in communities, and contribute to topics such as coexistence and citizen security. Sustainable productive diversification will be undertaken with the participation of the productive sector related to agriculture, tourism, energy and environmental protection, in order to promote value chains and social responsibility.

34. Partnerships will be established with social grass-roots organizations to strengthen community participation and support the implementation of global initiatives such as the consultation processes for the post-2015 agenda and the Sustainable Energy for All (SE4All) initiative. Over the next few years, links with multilateral organizations such as the Inter-American Development Bank (IDB) and the Andean Development Corporation (ACF), foundations such as the Centre for Studies on Growth and Development of the Venezuelan Population (FUNDACRESEDA), the La Salle Natural Sciences Foundation and non-governmental organizations (NGOs) specializing in sectoral issues, will be strengthened with a view to concluding cooperation agreements, financial support and the Programme dissemination.

### **III. Programme and risk management**

35. This country programme document outlines the contributions of UNDP to national results and serves as the primary unit of accountability to the Executive

Board and the regional bureau for results alignment and resources assigned to the programme.

36. The Programme will be executed in coordination with the Ministry of Planning, through the Office of Technical Cooperation and Multilateral Financing. It will be executed nationally and the projects will be implemented by State institutions and/or UNDP. The Government may require UNDP to adopt the “fast-track” procedure if necessary.

37. The Programme will be implemented with a results-based management approach, with a monitoring and evaluation plan; it will be implemented jointly with the Ministry of Planning and other strategic partners. The new programme cycle will strengthen strategic partnerships with non-traditional sources, such as the international financial sector, private foundations, and South-South and triangular cooperation. In light of changing institutional dynamics, and as a mitigation measure, an inter- and multi-institutional approach will be developed to ensure continuous programme management.

38. For 2015-2019, estimated resources from the regular budget of UNDP amount to US\$ 1,608,000, US\$ 67,900,000 are expected to be mobilized in matching funds from the Government and US\$ 9,000,000 from the Global Environment Facility (GEF). The State has shown an interest in receiving UNDP support to promote the country as an international development partner, through knowledge management and the creation of synergies between local and international programmes. In this context, two major risks have been identified:

<i>Dimension of risk</i>	<i>Description of risk</i>	<i>Risk mitigation or adaptation measures</i>
Financial	Insufficient financial resources	Jointly with sectoral institutions, establish available and potential resources Establish a resource mobilization strategy
Environmental	Climate events that may affect programme execution planning	Provide incentives for the application of environmental safeguards in programme design and implementation in order to make the necessary corrections in planning and implementation processes

#### **IV. Monitoring and evaluation**

39. The monitoring and evaluation plan of the present Programme was developed in compliance with the new UNDP evaluation policies. It will combine evaluations of the Programme and expected results of various projects, all aimed at assessing the contributions of UNDP to the adoption of sustainable livelihoods, universal access to basic services and comprehensive risk management.

40. The baseline, targets and indicators of those outcomes for which no information was available when the present document was compiled will be established at the outset of the Programme. In that regard, UNDP expects to work with counterparts to validate the means of verification and to establish the periods

for the gathering and compilation of information at least every six months. Annual progress reports will be prepared.

41. UNDP will also strengthen the institutional capacities of entities that generate information disaggregated by gender, ethnicity and age, with an emphasis on environmental, sociodemographic and citizen security statistics. Programme execution may support the promotion and strengthening of national monitoring and evaluation capacities.

42. A mid-term review is expected to be conducted in 2017 to determine the Programme's effectiveness, and a final evaluation at the end of the Programme reflecting the contribution of UNDP will be conducted in 2019. These evaluations will cover the three areas of cooperation. They will also be independent and seek to identify impact, lessons learned, good practices, conclusions and strategic recommendations.

## Annex

## Results and resources framework for Venezuela (2015-2019)

National priority or goal: II. To continue to build twenty-first century Bolivarian socialism in Venezuela, as an alternative to destructive and unbridled capitalism, and thereby ensure the greatest happiness possible, the greatest social security and the greatest political stability for our people.

UNDAF (or equivalent) outcome involving UNDP

**No. 1.1** By 2019, the United Nations system will have contributed to the implementation of public policies geared towards poverty reduction, promotion of equality, social inclusion and sustainable development, taking into consideration, inter alia, the country's demographic dynamics

**No. 6.1** By 2019, the United Nations system will have contributed to the implementation of public policies aimed at the conservation and sustainable management of natural ecosystems and efficient environmental management in urban and rural areas, comprehensive risk management, and the efficient and diversified use and production of electric energy

**Related Strategic Plan (SP) outcome: SP 1** Growth and development are inclusive and sustainable, incorporating productive capacities that create employment and livelihoods for the poor and the excluded.

**SP outcome indicator: 2.** Coverage of social protection systems, disaggregated by sex, age, income, rural/urban communities and groups at risk: 4 Coverage of sustainable and cost-effective energy, disaggregated by sex, age, income, rural/urban communities and groups at risk. 5. Hectares of land managed sustainably in line with a system of conservation, sustainable use or access and profit-sharing.

<i>UNDAF outcome indicator(s), baselines, target(s)</i>	<i>Data source and frequency of data collection and responsibilities</i>	<i>Indicative country programme outputs (including indicators, baselines, targets)</i>	<i>Main partners/partnerships frameworks</i>	<i>Indicative resources by outcome (\$)</i>
<i>Indicator 1.1.1</i> Number of programmes and plans that incorporate demographic dynamics, the principles of sustainable development and poverty reduction with an emphasis on women, youth and girls, boys and adolescents. <i>Baseline:</i> To be defined <i>Target:</i> At least one programme and plan for each level of government	Reports and accounts of relevant ministries and autonomous or associated institutes.  Conceptual development documents for government plans and programmes  Bulletins, databases and other periodic statistical reports	<b>Output 1:</b> Socio-productive and artisanal initiatives aimed at vulnerable populations in marginal areas, supported through technical assistance.  <b>Indicator 1.1:</b> Number of socio-productive initiatives implemented and systematized that have been assisted, with an emphasis on women	National Assembly  General Police Council  National Electoral Council  Office of the Ombudsman  National Directorate for Emergency Preparedness and Disaster Management	Output 1 Target for resources assignment from the core (TRAC) 200,000  To be mobilized 600,000

in line with the methodology agreed with the Government.

*Indicator 1.1.2* Number of socio-productive projects carried out in key municipalities in line with human development strategies, with an emphasis on women and youth. *Baseline:* To be defined. *Target:* At least five new projects among all socio-productive projects carried out in key municipalities in line with human development strategies, with an emphasis on women and youth

*Indicator 1.1.3* Number of statistical operations of the National Statistical System that improve the timeliness and quality of available information. *Baseline:* Disaggregation of the population census by ethnicity, territory, sex and life course. Surveys normally only disseminate data aggregated nationally or, sometimes, by federal entity. Information contained in administrative records is disaggregated by sex, age and territory. *Target:* At

Sectoral programmes, national sectoral plans, local plans

heads of households, isolated communities, indigenous peoples and youth. *Baseline:* N/A *Target:* Five. *Evidence base:* institutional reports. Community testimonies

**Indicator 1.2:** Number of socio-productive initiatives benefiting vulnerable families, mainly headed by women. *Baseline:* 500,000 families living in extreme poverty *Target:* 5. *Evidence base:* Project implementation reports. Community testimony

**Output 2:** Increased institutional capacities for the formulation, management and monitoring of poverty reduction programmes and plans, from a sustainable human development perspective.

**Indicator 2.1:** Number of poverty reduction programmes and plans with an emphasis on women, youth and boys and girls supported by UNDP *Baseline:* Five (5) national programmes established.

*Target:* 2 more. *Evidence*

12,000,000

*Baseline:* Number of initiatives: 5 *Target:* At least two (2) initiatives increase access to and the quality and efficient use of electrical energy, and diversification to clean-energy sources and low-emission technologies.

*Indicator 6.1.4* Number of programmes and plans that incorporate the principles of environmental sustainability. *Baseline:* To be defined *Target:* At least seven (7) programmes and/or plans incorporate the principles of environmental sustainability.

strengthening the national electricity system.  
*Evidence base:* institutional reports.

*Output 5.* Strengthened institutional capacity for the generation, disaggregation, analysis and integration of socioeconomic, environmental, electric energy, comprehensive risk management and citizen security statistics.

**Indicator 5.1:** Number of technological and knowledge tools incorporated by institutions in the projects assisted. *Baseline:* NA. *Target:* Five (5). *Evidence base:* bulletins and reports.

---

**National priority or goal:** III. To make Venezuela a powerful social, economic and political player in the great nascent power of Latin America and the Caribbean, that ensures the establishment of a zone of peace in our America.

---

#### **UNDAF (or equivalent) outcome involving UNDP**

**No. 5.1.** By 2019, the United Nations system will have contributed to the implementation of public policies in the areas of citizen security and access to justice, ensuring the exercise of human rights and the reduction of crime.

**No. 5.2.** By 2019, the United Nations system will have contributed to the implementation of a comprehensive policy aimed at consolidating a culture of peace, focusing on solidarity-based coexistence and living well.

**No. 6.1.** By 2019, the United Nations system will have contributed to the implementation of public policies aimed at the conservation and sustainable management of natural ecosystems and efficient environmental management in urban and rural areas, comprehensive risk management and the efficient and diversified use and production of electric energy.

**Related SP outcome:** SP 3 Strengthened national institutions enabling the achievement of universal access to basic services.

**SP outcome indicator:** 1. The level of public confidence in the delivery of basic services, disaggregated by sex, urban/rural communities and income groups.

<p><i>Indicator 5.1.1</i> An integrated system of statistics on citizen security, with an emphasis on gender-based violence and violence against boys, girls and adolescents, disaggregated by age group, sex, territory and ethnic group. <i>Baseline:</i> There is no available systematized and properly integrated information <i>Target:</i> At least three (3) statistical operations integrated into an information system on citizen security, gender-based violence and violence against boys, girls and adolescents, updated annually and available for public use, disaggregated by ethnicity, territory, sex and life course.</p>	<p>Reports and accounts of State institutions.</p>	<p><b>Output 6:</b> Strengthened capacities related to management, access to information and efficiency among local public institutions.</p>	<p>Town councils National Assembly General Police Council Office of the Ombudsman</p>	<p><b>Output 6 TRAC 50,000 To be mobilized 300,000</b></p>
<p><i>Indicator 5.1.2</i> Number of institutions in the system of protection that properly implement guidelines and protocols for action to promote access to justice, with an</p>		<p><b>Indicator 6.1:</b> Number of initiatives assisted. <i>Baseline:</i> N/A <i>Target:</i> Two (2). <i>Evidence base:</i> reports</p>	<p>Governorates Gran Misión A Toda Vida Venezuela Hydrological entities</p>	<p><b>Output 7 TRAC 150,000 To be mobilized 1,800,000</b></p>
