Substantive session of 2011

Geneva, 4-29 July 2011

Item 13 (a) of the provisional agenda*

**Economic and environmental questions:
sustainable development**

Integrated analysis of United Nations system support to small island developing States

Report of the Secretary-General

Summary

The Programme of Action for the Sustainable Development of Small Island Developing States (the Barbados Programme of Action) and the Mauritius Strategy of Implementation for the Further Implementation of the Programme of Action for the Sustainable Development of Small Island Developing States have both underscored the importance of the support of the United Nations system to advance efforts towards sustainable development in small island developing States. Over the years, the way in which this support has been extended has varied among the various United Nations entities. On the whole, the organizations of the United Nations system have provided a wide range of targeted support for small island developing States in relation to the Mauritius Strategy, in accordance with their respective mandates. There are, however, gaps and room for improvement in the provision of this support, including in the delivery of coordinated and coherent programmes for the implementation of the Mauritius Strategy; concerted actions to strategically address critical areas of priority for small island developing States would enhance the effectiveness of the efforts made by the United Nations system to help advance progress in its implementation. Collectively, relevant United Nations agencies are also committed to provide normative, analytical and capacity-building support to small island developing States to enhance international recognition of their special case and to help strengthen their resilience against multiple challenges.

I. Introduction

1. The unique sustainable development challenges facing small island developing States were first formally recognized by the international community when it articulated their special case in chapter 17 of Agenda 21¹ adopted in 1992. The Programme of Action for the Sustainable Development of Small Island Developing States² (the Barbados Programme of Action), adopted two years later, recognizes the important role of all relevant organs, programmes and organizations of the United Nations system, within their respective areas of expertise and mandates, in supporting and supplementing national efforts in the implementation of that Programme of Action. Moreover, in paragraph 101 of the Mauritius Strategy for the Further Implementation of the Programme of Action for the Sustainable Development of Small Island Developing States (the Mauritius Strategy),³ adopted in 2005, the Secretary-General was requested to fully mobilize and coordinate the agencies, funds and programmes of the United Nations system, including at the level of the regional commissions, within their respective mandates, and to further mainstream small island developing States issues to facilitate coordinated implementation of the follow-up to the Barbados Programme of Action at the national, regional, subregional and global levels.

2. Since the adoption of the Mauritius Strategy, the need to review and enhance the effectiveness, coherence and coordination of United Nations system support for small island developing States has been called for by the General Assembly and the Economic and Social Council in various resolutions. In the same year as the high-level five-year review of the implementation of the Mauritius Strategy (September 2010), the Economic and Social Council, in resolution 2010/34, requested the Secretary-General to submit to it at its present session recommendations on how such support could be more targeted, cost-efficient, measurable and effective. Further, the General Assembly, in resolution 65/2, called upon the Secretary-General to conduct a comprehensive review and examine ways to enhance the coherence and coordination of United Nations support for those States and to report to it at its sixty-sixth session, putting forward concrete recommendations to Member States in that regard.

3. The objective of the present report is to review the progress made by the United Nations system in mainstreaming and integrating the Barbados Programme of Action and the Mauritius Strategy into its mandates, programmes and processes, with a view to promoting the coherence and coordination of United Nations support to small island developing States. The report also, as requested by the Economic and Social Council, formulates recommendations on how such support can be more targeted, efficient and effective.

¹ *Report of the United Nations Conference on Environment and Development, Rio de Janeiro, 3-14 June 1992* (United Nations publication, Sales No. E.93.I.8 and corrigenda), vol. I: resolutions adopted by the Conference, resolution 1, annex II.

² *Report of the Global Conference on the Sustainable Development of Small Island Developing States, Bridgetown, Barbados, 25 April-6 May 1994* (United Nations publication, Sales No. E.94.I.18 and corrigenda), chap. I, resolution 1, annex II.

³ *Report of the International Meeting to Review the Implementation of the Programme of Action for the Sustainable Development of Small Island Developing States, Port Louis, Mauritius, 10-14 January 2005* (United Nations publication, Sales No. E.05.II.A.4 and corrigendum), chap. I, resolution 1, annex II.

4. The report takes into account information gathered from a variety of sources, including the websites, reports and publications of United Nations organizations, documentation prepared by the Small Island Developing States Unit of the Division of Sustainable Development, Department of Economic and Social Affairs, United Nations Secretariat, for the consideration of the Committee for Development Policy at its twelfth session, input provided by members of the inter-agency consultative group on small island developing States, commissioned papers surveying some of the issues covered in the present report, and direct input and views of Member States.

5. Section II of the report reviews how United Nations entities have mainstreamed support for the implementation of the Barbados Programme of Action and the Mauritius Strategy into their respective organizational structures, how issues relevant to small island developing States are dealt with at the global, regional and country levels, how support is provided to small island developing States through four main domains, namely, the normative, capacity-building, analytical and coordinating work of the United Nations system. A number of recommendations are contained in section III.

6. The report of the Secretary-General on the follow-up to and implementation of the Mauritius Strategy, to be submitted to the General Assembly at its sixty-sixth session in response to paragraph 12 of its resolution 65/156, will reflect any feedback on the present report and the relevant discussions at the Council's substantive session of 2011.

II. Analysis of the support provided by the United Nations system to small island developing States

7. This present section focuses on the mandates of relevant United Nations entities, with reference to institutional aspects, programmes and projects.

A. Mandates

8. At the global level, the Small Island Developing States Unit at United Nations Headquarters has been entrusted with a broad range of functions to support the implementation of the Mauritius Strategy (see General Assembly resolution 60/194). The Unit provides technical assistance and advice, supports intergovernmental processes, leads inter-agency coordination, and reports on progress made in the implementation of the Mauritius Strategy. The Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States is mandated to undertake advocacy work in support of small island developing States, in partnership with the relevant entities of the United Nations, and to mobilize resources for the implementation of the Mauritius Strategy.

9. At the regional level, the Mauritius Strategy entrusts the regional commissions with responsibility for advocacy and the coordination of support to small island developing States. The regional commissions have a comparative advantage in facilitating coordination and collaboration in regard to the implementation of the Mauritius Strategy at the regional level. Two regional commissions have subregional offices that facilitate coordination: the Pacific Operations Centre of the Economic

and Social Commission for Asia and the Pacific (ESCAP) and the Subregional Headquarters for the Caribbean of the Economic Commission for Latin America and the Caribbean (ECLAC).

10. While the respective mandates of the United Nations system of organizations relate to specific programme areas of relevance to the Mauritius Strategy, together they cover much of its substance. The agencies, funds and programmes therefore play a major role in assisting small island developing States to implement the Mauritius Strategy in various programme areas. Among these organizations are the United Nations Development Programme (UNDP), the United Nations Environmental Programme (UNEP), the Food and Agricultural Organization of the United Nations (FAO), the United Nations Industrial Development Organization (UNIDO), the United Nations Educational, Scientific and Cultural Organization (UNESCO), the United Nations Conference on Trade and Development (UNCTAD), the International Fund for Agricultural Development (IFAD), the World Health Organization (WHO) and the United Nations Population Fund.

11. The Convention on Biological Diversity, the United Nations Framework Convention on Climate Change and the United Nations Convention to Combat Desertification cover much of the Mauritius Strategy. The Conference of the Parties to each of these three conventions provides a global forum in which small island developing States can articulate their needs and priorities and leverage support from the United Nations system.

B. Institutional issues

Specific institutional set-up in support of small island developing States

12. Paragraph 128 of the Barbados Programme of Action invited the organizations and bodies of the United Nations system to consider the establishment of focal points for its implementation. The response to this call has been mixed.

13. Only 10 United Nations agencies have designated a specific focal point for small island developing States, and range from a subregional office to a country relations officer for the Caribbean and Pacific islands at the Global Environmental Facility (GEF). The ECLAC Caribbean office has five regular and two project staff, while the ESCAP Pacific Office has nine regular and two extrabudgetary posts. UNEP has a dedicated focal point at its headquarters in Nairobi and a regional focal point for the Caribbean within its Regional Office for Latin America and the Caribbean, in Panama City. UNESCO has a Section for Small Islands and Indigenous Knowledge, consisting of five regular and four extrabudgetary staff. Others have a focal point dealing with small island developing States as part of a broader portfolio, such as in the case of FAO. Where the functions of the focal point are carried out by a regional office, the focus tends to be on coordination of regional activities rather than the global coordination envisaged in the Barbados Programme of Action.

14. At the United Nations Secretariat, given the zero budget growth over many years, the number of posts within the Small Island Developing States Unit has not increased: the Unit had four regular posts and three extrabudgetary staff around the time of the convening of the International Meeting in Mauritius in 2005 and the numbers and composition remain the same today. This small team conducts all

normative, analytical and capacity-building activities. One positive development to note since 2005 is that the Unit now reports directly to the Director of the Division for Sustainable Development. Also, the Office of the High Representative now has one post dedicated to small island developing States, which did not exist in 2005.

15. There are other institutional arrangements. UNCTAD deals with small island developing States as part of its special programmes. The Convention on Biological Diversity has a programme of work on island biodiversity, supported by a dedicated staff. Other agencies deal with the issues of concern to small island developing States as part of their overall programme of work.

Mainstreaming the implementation of the Mauritius Strategy into the work programmes of the United Nations system

16. The mainstreaming and integration of activities related to small island developing States into the work programmes of the United Nations system has been identified as key for the implementation of the Barbados Programme of Action and Mauritius Strategy (see General Assembly resolution 65/156). The way in which this has occurred differs from entity to entity. ECLAC has effectively mainstreamed and integrated issues of concern to small island developing States into its work through the establishment of its Subregional Headquarters for the Caribbean and the Caribbean Development and Cooperation Committee. In the case of ESCAP, the priorities of Pacific small island developing States have been integrated into the work of the Commission through the work programme of its Pacific Operations Centre. Most United Nations agencies have mainstreamed issues relating to small island developing States into their programme of work without necessarily resorting to a dedicated programme. UNEP takes an institution-wide strategic approach to its work so as to ensure that issues related to the needs and priorities of small island developing States are mainstreamed into its programme of work. UNESCO, with activities coordinated by its small island developing States focal point, uses the intersectoral platform established in 2007 for the sustainable development of small island developing States to pursue an integrated approach in its work on sustainable island living and development, which emphasizes interregional cooperation. WHO mainstreams issues of concern to small island developing States within the overall context of its work in all developing countries. The regional offices, however, help to tailor projects and programmes to the special needs of their constituent countries.

17. Another approach used is the United Nations Development Assistance Framework process, managed by UNDP, which also helps to mainstream and integrate issues related to small island developing States, as individual countries and as part of a subregion, into the development activities of the United Nations system in support of the Barbados Programme of Action and the Mauritius Strategy. At the country level, mainstreaming is also supported by other multilateral strategies, such as the poverty reduction strategy papers of the World Bank and the four-year rolling national medium-term priority frameworks of FAO.

C. Financial contributions

Allocation of financial resources to small island developing States

18. According to the 2008-2009 aid statistics of the Development Assistance Committee of the Organization for Economic Cooperation and Development

(OECD-DAC), United Nations agencies and the Bretton Woods institutions ranked among the top 10 donors of gross official development assistance (ODA) among the 34 small island developing States for which such data were available. While there are country differences, organizations among those 10 included GEF, UNDP, the Joint United Nations Programme on HIV/AIDS, the International Monetary Fund (IMF) and the International Development Association (IDA) of the World Bank Group. The figures cited below represent only the information available at the time the present report was finalized.

19. The World Bank has strengthened its financial assistance to small States, a category which includes several small island developing States. The resources allocated by IDA to small Pacific islands, except Papua New Guinea and Timor-Leste, have increased from around \$40 million in each of the two previous IDA cycles (fiscal years 2003-2005 and 2006-2008) to nearly \$100 million in the current IDA cycle (fiscal years 2009-2011). In June 2010, the Board of Directors of the World Bank Group endorsed the Regional Partnership Strategy of the Organization of Eastern Caribbean States, which seeks to support economic stability, competitiveness, and inclusive and sustained growth; financial assistance of up to \$193 million is anticipated, in addition to technical and advisory services, for the next four years. Through its climate investment funds, the World Bank is working with other regional development banks in the Caribbean and the Pacific on the pilot programme of climate resilience. This effort provides from \$60 million to \$70 million in grant financing for a range of activities, including data collection, monitoring and capacity-building.

20. Small island developing States eligible for GEF funding have received financial allocations under the fourth and fifth replenishments of GEF. The total allocation for all eligible small island developing States under the fifth replenishment is around \$150 million.

21. In its regular programme budget, UNESCO has devoted about \$15 million to small island developing States over the past five years, with such States designated a priority area. In addition, approximately \$8 million were provided to small island developing States through its Participation Programme, which allows national execution of activities in line with the objectives of the Programme and the budget of the Organization.

22. By early 2005, the total allocation for IFAD projects in small island developing States amounted to \$148.7 million. Many of these projects are still ongoing. IFAD funds are usually a mixture of loans and grants, the latter being employed particularly in the least developed countries and to alleviate poverty. The FAO Trust Fund for Food Security and Food Safety has been used to fund two regional projects in the Pacific and the Caribbean.

Resource mobilization

23. The Small Island Developing States Unit has, over time, been able to mobilize donor funding to support the participation of small island developing States in the International Meeting in Mauritius, in the five-year review process of the Mauritius Strategy and now in the preparations for the United Nations Conference on Sustainable Development, to be held in 2012. The Unit has also mobilized bilateral funding to support project proposals that would benefit all small island developing States, such as a project funded by the Government of Spain (with a budget of over

\$2.8 million) which includes revitalization of the Small Island Developing States Network (SIDSNet), the virtual training programme implemented through the university consortium of small island developing States and the European Union-funded monitoring and evaluation project for the Mauritius Strategy (\$470,000). ESCAP and ECLAC have played a role in helping the small island developing States in their constituencies to mobilize resources for implementing the Mauritius Strategy. GEF has also supported programmes and projects for small island developing States in its areas of focus through country-specific allocations. GEF, in partnership with the implementing agencies and countries, also works with other donors to help secure co-financing of projects. UNDP, as the main GEF implementing agency, has played a key role in that regard by mobilizing significant resources from GEF for the implementation of activities covering various areas of the Barbados Programme of Action and the Mauritius Strategy. The World Bank has also played an important role in mobilizing financial resources. In the sixteenth replenishment of IDA, there is enhanced financial support to help small economies, including small island developing States, to make progress towards the achievement of the Millennium Development Goals. In addition, small island developing States can also access other funds, such as the Least Developed Countries Fund (i.e., the 10 small island developing States in that group) and the Special Climate Change Fund, both of which are managed by GEF.

24. Other organizations of the United Nations system have also played an important role in mobilizing resources in their area of specialization. UNEP has been able to mobilize funds from GEF for activities and regional projects related to biodiversity, climate change, land management, persistent organic pollutants and international waters. UNEP has also mobilized funds for projects and programmes from bilateral donors and multilateral donors, such as the European Commission. WHO has successfully supported member States in mobilizing resources from the Global Fund to Fight AIDS, Tuberculosis and Malaria.

D. Four domains of support to small island developing States

1. Normative support

Monitoring and reporting

25. Monitoring of, and reporting on, the progress made in the implementation of the Mauritius Strategy is one of the primary roles of the Small Island Developing States Unit at United Nations Headquarters. The Unit reports to the Commission on Sustainable Development, the main United Nations body responsible for monitoring the implementation of the Barbados Programme of Action and the Mauritius Strategy. The planned European Union-funded monitoring and evaluation project to be undertaken by the Unit, in cooperation with the Indian Ocean Commission, will help to strengthen the monitoring capacity of small island developing States, as it includes country vulnerability and resilience profiling. UNDP, UNEP and the regional commissions also play important roles in providing support to the process of follow-up to and monitoring of the Mauritius Strategy at various levels. Many of the agencies, funds and programmes are accountable to their governing bodies in regard to activities in support of small island developing States. GEF is accountable to its members through the GEF Council and to donors through a number of mechanisms. The Executive Board of UNDP provides a monitoring mechanism for

its programmes. Furthermore, UNDP has monitoring and reporting processes in place within each country programme, as well as its subregional programmes. The 48 small States members of the World Bank, which include small island countries, gather at the Small States Forum to discuss their most pressing challenges and to hold themselves and their partners accountable for progress. The UNEP Governing Council and Global Ministerial Environment Forum provide a key monitoring mechanism at the global level for the work carried out by UNEP in relation to small island developing States. UNCTAD periodically reports to the Trade and Development Board on activities in favour of small island developing States, a denomination that was cited six times by member States in the Accra Accord, an outcome of the twelfth session of the Conference (2008).

Advocacy

26. The Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States plays a key advocacy role within the United Nations system, in partnership with the Small Island Developing States Unit. The regional commissions work proactively to ensure that the priorities and concerns of small island developing States are reflected in regional decisions, including those concerning the implementation of the outcomes of United Nations conferences. Such outcomes help to set the global policy agenda and influence the policies advocated by international and regional organizations, as well as the types of projects that bilateral donors would be likely to fund. At some United Nations organizations, governing councils or similar bodies help with advocacy for small island developing States. The GEF Council provides a forum for such States to advocate for their needs and priorities with donor agencies which could co-finance GEF-funded activities. UNEP also plays a key role in advocacy for small island developing States at the global, regional, subregional and national levels, particularly in areas of the Barbados Programme of Action directly related to its mandate. The advocacy role of UNCTAD focuses on substantively supporting small island developing States in their plea for modalities of special treatment. This relates to areas of critical importance to small island developing States, ranging from smooth transition measures for those that will be graduating from the least developed country category, to technical assistance that could be granted by virtue of their status. This implies enhancing the credibility of the category of small island developing State, a prerequisite that UNCTAD has responded to by adopting a list of 29 small island developing States for analytical and practical purposes.

Support for intergovernmental processes

27. Support to the preparatory process for the high-level five-year review of the Mauritius Strategy at the national, regional, interregional and global levels in 2010 was provided collectively by the United Nations system, in cooperation with relevant regional intergovernmental organizations, through numerous consultations held within the context of the inter-agency consultative group on small island developing States. This consisted of normative support, such as (a) providing national consultancy funding to small island developing States, upon request, in undertaking national assessments; (b) commissioning regional assessments; and (c) funding, planning, organizing and coordinating both substantive and logistical arrangements for preparatory meetings in the three regions of small island

developing States, for interregional meetings and for the high-level meeting itself. Similar support is being provided in the preparations for the United Nations Conference on Sustainable Development in 2012.

28. The Small Island Developing States Unit has also provided support to negotiations held during the General Assembly on the review of and follow-up to the Mauritius Strategy and issues related to the Caribbean Sea and coral reefs, and for planning for the small island developing States day, first designated by the Commission on Sustainable Development in 2005 and observed during its review sessions. The Office of the High Representative organized capacity-building events to strengthen the negotiating capability of officials of small island developing States and provided support to negotiations in meetings concerning fish stocks.

Knowledge management

29. Knowledge management is one of the key functions of the Small Island Developing States Unit. The Unit is actively engaged in strengthening information activities for decision-making by small island developing States, and facilitating networking among the stakeholders. As part of its ongoing efforts, the Unit maintains a dedicated section within the website of the Division for Sustainable Development. This resource serves as a portal for small island developing States to access information from a number of sources relevant to the Barbados Programme of Action and the Mauritius Strategy. In addition, the Unit supports SIDSNet, which was first established in 1997 as a direct follow-up to the Barbados Programme of Action. SIDSNet is currently undergoing complete redesign and revitalization, as part of a new project funded by the Government of Spain. The network will be transformed into a much-needed central knowledge management system and platform for sharing knowledge and experience, exploring partnership opportunities and much more.

30. The websites of the ESCAP Pacific Operations Centre and the ECLAC Caribbean Development and Cooperation Committee provide useful information for their subregions. The GEF website has a specific section which provides information on small island developing countries, networks and organizations, island country experiences in regard to GEF, the projects supported by GEF in small island developing States, topics of interest, and country information and contacts. The site also provides links to guides and templates for the preparation of project proposals, all of which are useful for small island developing States wishing to prepare proposals for GEF funding.

31. Several specialized agencies also have websites specific to small island developing States. The World Bank has a subsite on small States, while FAO has a web page containing information on specific items of interest to small island developing countries. UNESCO maintains a dedicated platform which presents its action for small island developing States on the basis of the chapters of the Mauritius Strategy. The Convention on Biological Diversity has a comprehensive website which contains a web portal on island biodiversity. The UNCTAD website contains a subsite on small island developing States, which provides useful materials and links.

32. The subregional offices of UNDP have websites dedicated to small island developing States. In the Pacific subregion, UNDP has established a partnership with the Pacific Islands Forum Secretariat, the University of the South Pacific and

the Asian Development Bank which has led to the creation of the Pacific Solution Exchange, a virtual community of practice which brings together experts, policymakers and practitioners from 14 small island developing States in the Pacific region.

2. Technical cooperation and support for capacity-building

33. The capacity-building support provided to small island developing States by various United Nations agencies has been steadily increasing in terms of both quantity and quality. As the needs of small island developing States become better articulated, capacity-building support has become more targeted. Challenges and gaps continue to exist, with the vulnerability of small island developing States increasing owing to climate change, more frequent disasters, high debt and fuel costs, to name a few.

34. The portfolio of projects to benefit small island developing States carried out by the Division for Sustainable Development, including the Small Island Developing States Unit, now amounts to approximately \$4.7 million. These projects aim to build the capacity of small island developing States in regard to the information and policymaking tools that address knowledge management, monitoring and evaluation, national sustainable development strategies and indicators, and such thematic areas as climate change, energy, water, human security and community-based disaster management.

35. The United Nations Development Programme assists small island developing States by offering a broad menu of policy advisory services and by delivering development programmes that are closely aligned with national development priorities. With regard to poverty, UNDP is working with several small island developing States in the areas of financial inclusion, strengthening national capacities as regards Millennium Development Goal-based policies and aid effectiveness systems, and promoting the exchange of knowledge on social protection systems. On governance deficits, UNDP works closely with national parliaments to strengthen their legislative and oversight capacities and advocates for the stronger political representation of women. On climate change, UNDP strives to strengthen adaptive capacity and the resilience of communities, and provides policy advice to governments on climate finance. Of particular significance in this context is its low-emission, climate-resilient development approach, which provides support to countries in the development of road maps to address climate change in ways that are pro-poor and that assist in the achievement of the Millennium Development Goals. An example of this approach is the UNDP/World Bank SIDS Dock initiative, developed in partnership with the Alliance of Small Island States.

36. The Global Environment Facility is the main source of funding for programmes and projects undertaken in support of the implementation of the Mauritius Strategy. GEF ranked among the 10 top ODA donors in terms of all small island developing States for which OECD-DAC aid statistics are reported. GEF provides funding for a wide range of projects and programmes on environment issues, including biodiversity, climate change, international waters, land degradation, the ozone layer and persistent organic pollutants.

37. The efforts of ECLAC and ESCAP have mainly focused on providing technical advice to the Governments of small island developing States, upon request. Various projects and activities related to the topics highlighted in the Mauritius Strategy are

currently under way. Results have included policy changes influenced by the analytical inputs and policy advice provided by the two regional commissions to countries receiving technical cooperation services.

38. Activities carried out by UNCTAD for the benefit of small island developing States have been geared towards enhancing their capacities to find beneficial economic opportunities in current global markets, and to prevent their further marginalization from the global economy. This action involves research and analysis, the provision of policy advice to individual countries and technical assistance in areas ranging from smooth transition strategies for small island developing States graduating from the least developed country category to trade and investment policies. UNCTAD has the longest experience within the United Nations system in dealing with issues of specific relevance to small island developing States, having done so since 1974.

39. The capacity-building support provided by UNEP to small island developing States covers six cross-cutting thematic priorities of its medium-term strategy (2010-2013), namely, climate change, disasters and conflicts, ecosystem management, environmental governance, harmful substances and hazardous waste, and resource efficiency. In the Caribbean, the efforts of UNEP are guided by its Caribbean small island developing States programme.

40. The UNESCO programme for 2010-2011 includes interventions specific to island countries across the entire range of its activities, with particular emphasis given to such priorities as climate change, cultural heritage, and the identification of locally driven approaches to sustainable development. A number of UNESCO programmes have established subprogrammes dedicated to support the implementation of activities in the small island developing States members of the organization.

41. The International Fund for Agricultural Development has supported extensive projects in small island developing States. IFAD has funded 23 projects in countries of the AIMS group, 8 projects in 4 Pacific small island developing States, and 29 projects in 11 Caribbean countries. The aims of these projects include facilitating the development of pro-poor policies and programmes, managing fish resources sustainably and profitably, improving the livelihoods of coastal communities threatened by overexploitation of the marine environment, and assisting rural households to diversify their on-farm and off-farm income-generating enterprises and to improve their prospects for gaining employment.

42. Among other activities, FAO works to enhance the contribution of agriculture, forestry and fisheries to the development agenda of small island developing States. It implements national and regional programmes for food security, and seeks to assist small island developing States to integrate sustainable food security policies and programmes into national poverty reduction strategies.

43. The International Telecommunication Union (ITU) has carried out activities to bridge the digital divide between small island developing States and the rest of the world. Efforts undertaken by ITU have focused on reforming the telecommunication sector of these countries to introduce new structures which are more conducive to faster and sustained telecommunication development, with well-managed and modern networks, while also seeking to achieve universal access to such services.

44. The United Nations Children's Fund (UNICEF) has trained government officials in various small island developing States in child protection and education in emergencies. It has supported the review and revision of policies to ensure the educational rights of children during disasters, as well as the study of the impact of climate change on children in respect of survival, development, protection and participation issues.

45. The World Bank has focused its efforts on aligning assistance with the priorities of individual countries and harmonizing aid programmes with other agencies to boost aid effectiveness. In the Pacific, the World Bank has been active in taking the small States agenda forward, developing a targeted and innovative lending programme, and implementing a responsive programme of country-based activities. In the Caribbean, it has provided flexible support for disaster mitigation, including contingent loans and analysis of the insurance market in relation to natural disasters.

46. The World Intellectual Property Organization has been engaged in the development and strengthening of national intellectual property systems and strategies to promote economic, social and cultural development in small island developing States of all three regions. Efforts have included the protection of traditional knowledge, regional patent systems, and the formulation of national intellectual property strategies.

47. The United Nations Industrial Development Organization has been active in promoting a number of national and regional projects among small island developing States, mainly in the area of energy.

3. Analytical support

Publications

48. Overall, the publications of United Nations agencies related to small island developing States have mostly been issued on a non-recurrent basis over the period 2005-2010. Very few have focused solely on such States but many organizations have released thematic or generic development-related publications which encompass or are relevant to them.

49. Publications of organizations of the United Nations system on themes of direct interest or relevance to small island developing States include the following: the UNCTAD publications on trade and development; the UNDP *Human Development Report* and other general development-related publications; the UNESCO booklet, *Islands in a Sea of Change*;⁴ the wide range of technical reports prepared by the Convention on Biological Diversity in collaboration with UNEP, the International Union for the Conservation of Nature and others, on issues such as invasive alien species, biodiversity and tourism; the two recent publications prepared by the Division for Sustainable Development for the five-year review of the Mauritius Strategy, *Trends in Sustainable Development: Small Island Developing States, 2010*⁵ and *SIDS-SIDS Success Stories: An Innovative Partnership in South-South*

⁴ UNESCO, Paris, September 2009.

⁵ United Nations publication, Sales No. E.10.II.A.12.

Cooperation;⁶ the study, *Enhancing Pacific Connectivity*, prepared by ESCAP with the support of the Office of the High Representative, the UNDP Special Unit and the Government of Turkey (ST/ESCAP/2472); and the series of thematic and country-specific papers exploring the role of government policies and, in particular, social policies for the promotion of social development and economic transformation, focusing on 11 small island developing States and prepared by the United Nations Research Institute for Social Development in collaboration with the Commonwealth.

Data and statistics

50. Some organizations of the United Nations system publish data specific to small island developing States and allow users to access country-specific data. The UNCTAD *Handbook of Statistics* focuses on the group of 29 small island developing countries identified by UNCTAD as its operational list. The World Bank is one of the prime sources of statistics and data for all countries, including small island developing States, in particular in regard to economic data. UNEP provides a range of environmental information through the publications listed on its website, including *State of the Environment*, as well as environment-related information on individual countries. The section dedicated to small island developing countries on the UNESCO website contains links to statistics and data on key areas of interest, such as education statistics, information on research and development, and access to the Data Centre⁷ which contains over 1,000 types of indicators and raw data on education, literacy, science and technology, culture and communication. UNESCO also provides assistance to member States to help them improve their statistical and analytical capacities. Through FAOSTAT,⁸ FAO provides data and statistics related to agriculture and food security, including for small island developing States. The revitalization of SIDSNet envisions that a dedicated web portal containing a broad range of data and statistical information related to the sustainable development of small island developing States will soon be available online. A special issue⁹ of the United Nations *World Statistics Pocketbook* was prepared by the Office of the High Representative in collaboration with the Statistical Division of the Department of Economic and Social Affairs.

51. At the regional level, ESCAP and ECLAC help to improve the statistical capabilities of the countries in their respective regions by strengthening national statistical infrastructure and promoting improvement in data quality, international comparability and the appropriate use of new techniques. In the Pacific, donors, United Nations agencies and multilateral organizations are working together to strengthen national disaggregated data and information systems through the 10-year Pacific statistics strategy. In the Caribbean, UNICEF, in partnership with the Caribbean Community (CARICOM), has supported the development of online DevInfo databases for sharing national data on children in the CARICOM

⁶ United Nations, Department of Economic and Social Affairs, New York, August 2010. The publication was prepared by the Small Island Developing States Unit in cooperation with the Special Unit for South-South Cooperation of UNDP, on the basis of a collaborative effort among members of the inter-agency consultative group on small island developing countries.

secretariat (CARICOMInfo) and St. Lucia (HelenInfo), while the secretariat of the Organization of Eastern Caribbean States and the Governments of Barbados, Dominica, Saint Kitts and Nevis and Saint Vincent and the Grenadines have developed desktop versions of their databases.

4. Coordination mechanisms

52. Coordination mechanisms for activities related to small island developing States within the United Nations system use a diversity of approaches at the national, regional and global levels.

53. At the national level, each UNDP office coordinates the activities of United Nations agencies by bringing them under the umbrella of the United Nations country team. The country team delivers coordinated services, supporting the sustainable development goals and priorities of the country in order to promote the achievement of the Millennium Development Goals.

54. At the regional level, the regional coordination mechanism in the Caribbean promotes a partnership among ECLAC, UNEP and the secretariats of CARICOM, the Association of Caribbean States and the Organization of Eastern Caribbean States. In the Pacific, membership in the Sustainable Development Working Group of the Council of Regional Organizations of the Pacific includes both United Nations and non-United Nations regional organizations in the region. The support provided by UNDP is coordinated within the subregions of small island developing States through subregional offices in Fiji and Samoa (for the Pacific) and in Barbados (for the Caribbean), and by a focal point at headquarters. There is no coordination mechanism for the small island developing States of the AIMS region, owing partly to the lack of a specific subregional coordinating office and partly to their geographical spread.

E. Optimizing support through better coordination

55. Progress in regard to coordination has been mixed. At the global level, the Small Island Developing States Unit has the primary role for coordination of support for small island developing States within the United Nations system, both through its role as chair and convenor of the inter-agency consultative group on small island developing States. The inter-agency group, which currently has 24 members, is an informal coordinating mechanism in which the focal points of all relevant United Nations and non-United Nations organizations hold consultations, exchange information and views, undertake joint planning and promote collaborative efforts in support of small island developing States. The inter-agency group has been instrumental in providing coordinated support to the five-year review of the Mauritius Strategy, especially at the national and regional levels. Enhanced inter-agency collaboration is ongoing in providing normative, analytical and capacity-building support to the preparations for the United Nations Conference on Sustainable Development in 2012. Collaboration is also under way in the preparation of key reports of the Secretary-General, such as the present report and the report to be submitted to the General Assembly at its sixty-sixth session on how to address more effectively the vulnerabilities of small island developing States.

56. At the regional level, ESCAP and ECLAC, through their subregional offices, have worked in close collaboration with other United Nations entities and regional

organizations to coordinate the support provided by the United Nations system to small island developing States. ECLAC and ESCAP are also assisted by non-United Nations regional bodies, such as CARICOM, the South Pacific Regional Environment Programme and the Pacific Islands Forum. Through the work of these two regional commissions, small island developing States have an opportunity to be more closely aligned with other countries in the region, thus promoting regional cooperation.

57. The United Nations Development Programme has played a vital role in the coordination of activities of the United Nations system at the national and regional levels through its country and subregional offices in the Pacific and Caribbean. This role has been supported by the extensive network of UNDP country and subregional offices around the globe, which have helped to coordinate the development activities of UNDP and of various other United Nations agencies in support of the Barbados Programme of Action and the Mauritius Strategy. This process of coordination is usually based on the results of the common country assessment, which forms the basis of the United Nations Development Assistance Framework for a country or subregion. The Framework for the Pacific provides a good example of the process and purpose of the United Nations Development Assistance Framework, which aims to provide a coherent and coordinated “One United Nations” approach to development at the country or subregional level. Examples of small island developing States in which this approach has been adopted include Comoros, Cape Verde, Mauritius and Seychelles.

58. The United Nations Environment Programme has strengthened the delivery of activities by using its network of regional offices, environmental conventions, action plans and partnerships. UNEP also coordinates its activities for small island developing States through the Regional Seas Programme and the Global Programme of Action for the Protection of the Marine Environment from Land-based Activities. UNESCO has cooperated closely with key agencies in the delivery of its programmes to small island developing States. Partner agencies include the Council of Regional Organizations of the Pacific and CARICOM. UNIDO has formed partnerships with UNDP, FAO, IFAD, the International Labour Organization, the World Trade Organization, UNEP and GEF in delivering its services to small island developing States. UNCTAD has been actively engaged with the Small Island Developing States Unit at United Nations Headquarters on issues related to the inter-agency consultative group, with ESCAP on technical assistance to countries in Asia and the Pacific graduating from the least developed country category, and with UNDP on the provision of direct support at the local level to various graduating small island developing States, and with regional intergovernmental organizations in the Caribbean, Pacific and AIMS regions.

III. Issues for consideration

59. The overall conclusion is that, on the whole, the United Nations system has provided small island developing States with a wide range of targeted support in the implementation of the Mauritius Strategy, in accordance with successive mandates. There is, however, room for improvement and enhancement in the delivery of coordinated and coherent programmes.

60. Strengthening United Nations support in accordance with the priorities identified in the Mauritius Strategy would accelerate progress towards the implementation of the Strategy and the achievement of the Millennium Development Goals and, in pursuance of General Assembly resolution 65/2, help to address the sustainable development challenges that continue to face small island developing States. Concerted action on critical elements would allow the efforts of the United Nations system to be more incisive. In the light of these critical elements, which are discussed below, and of the lessons learned from constraints in mainstreaming and integrating issues of concern to small island developing States into the work programmes of United Nations entities, Member States may wish, inter alia, to consider the issues set out below.

A. Mainstreaming

61. The Mauritius Strategy and a number of General Assembly resolutions have highlighted the importance of United Nations entities mainstreaming and integrating the Barbados Programme of Action and the Mauritius Strategy into their respective processes and programmes. One of the key conclusions of the present report is that, on the whole, United Nations entities have effectively mainstreamed the issues of concern to small island developing States into their programmes of work. This has been done in very different ways, according to individual mandates. The various approaches used by the organizations of the United Nations system illustrate a wide range of practices that can work effectively, given commitment and the allocation of sufficient resources.

Recommendation 1

Effective mainstreaming of issues of concern to small island developing States into the work of the United Nations system can be achieved in a variety of ways. Mainstreaming does not necessarily require special, stand-alone programmes targeted at these States; rather, a strategic approach has proven to be effective in integrating support for the Barbados Programme of Action into the work programmes of United Nations agencies, and ensures that the support provided to small island developing States is tailored to their special needs.

B. Coherent and coordinated approaches

62. One area in which progress has been mixed concerns coherent and coordinated approaches to issues of relevance to small island developing States; some successes have been achieved in this regard, while some gaps remain to be filled. The Small Island Developing States Unit plays a leading role in coordinating the relevant activities within the United Nations system, but has been constrained by lack of human resources despite repeated calls by the General Assembly for the strengthening of the Unit. High-level mechanisms, such as the United Nations System Chief Executives Board for Coordination and the United Nations

Development Group, because of their comprehensive mandates, are unlikely to address specifically issues related to small island developing States.

63. At the global level, the inter-agency consultative group has been effective, despite its informal status and working-level coordination of issues of concern to small island developing States. The work of this group is enhanced by the involvement of regional intergovernmental entities from outside the United Nations system. Questions have been raised as to whether this mechanism should be reviewed to include participation at the heads of agency level, and whether it should have a more formalized structure.

64. At the regional level, UNDP subregional offices and the subregional offices of ESCAP and ECLAC play vital roles in the coordination of United Nations system activities, and are ideally positioned to monitor the implementation of activities related to the Barbados Programme of Action and the Mauritius Strategy at the regional level. In the Caribbean, the United Nations-CARICOM Regional Strategic Framework, as a mechanism to coordinate technical assistance, could be aligned with the decisions of the Caribbean Development and Cooperation Committee of ECLAC so that it better reflects the views of the countries of the Caribbean. Such complementarity would ensure that the normative activities of the United Nations Secretariat are linked to the technical cooperation activities of the United Nations funds, programmes and specialized agencies. This could help streamline the overall regional coordination mechanism, promote policy coherence and ensure that the United Nations works as one.

65. In the Pacific, the Council of Regional Organizations of the Pacific is an effective coordinating mechanism at the regional level. The Pacific Plan Action Committee is another forum for collective monitoring, prioritization and policy oversight which would contribute to the implementation of the Mauritius Strategy.

66. For small island developing States in the AIMS region, for which there is no one regional coordinating mechanism or United Nations regional office, UNDP can play a key role, through its country offices, by helping to provide coherent and coordinated support to small island developing States, thereby promoting the “One United Nations” approach. Given the lack of a dedicated office or programme for small island developing States, the Economic Commission for Africa might focus on ensuring that the special needs and priorities of the small island developing States in its region are integrated into its programme of work.

67. At the country level, the United Nations Development Assistance Framework process provides an example of a good practice that helps the United Nations system to deliver a coherent and coordinated development programme. Positive examples of the “One United Nations” approach at the country level in small island developing States include those of Comoros, Cape Verde, Mauritius and Seychelles.

Recommendation 2

Coordination and coherence of support provided to small island developing States by United Nations entities needs to be strengthened. At the global level, efforts might include, inter alia, strengthening and expanding the role of the inter-agency consultative group on small island developing States, as needed, reviewing its modus operandi, and exploring the issue of formalization of the group. At the regional level, the United

Nations organizations represented in the AIMS region need to collectively explore ways and means of setting up a coordinated support mechanism for small island developing States. At the country level, efforts might include, inter alia, harnessing the United Nations Development Assistance Framework process to ensure the adoption of a “One United Nations” approach in an increasing number of small island developing States.

C. Institutional support

68. United Nations entities have adopted a diversity of approaches to provide institutional support to small island developing States. Some organizations have set up specific institutions to coordinate the support provided, while others have delegated responsibility for the coordination of the activities of their organization to regional offices located within a subregion. Where, however, island-specific issues are handled by a unit located in a division with a broader regional or programmatic mandate, these issues can be “lost”. In this regard, a dedicated office and/or focal point assists the delivery of coordinated support to small island developing States.

Recommendation 3

Although there is no one ideal mechanism for providing effective institutional support for small island developing States, setting up or strengthening a dedicated and clearly identified focal point within every United Nations entity dealing with issues of concern or thematic issues of relevance to small island developing States is vital for the effective delivery of support to such States. The need to strengthen the Small Island Developing States Unit of the Division of Sustainable Development, Department of Economic and Social Affairs, requires more urgent attention than ever before to effectively provide uninterrupted and coordinated support to small island developing States in the four domains mentioned above, especially in continuing to help these States address vulnerabilities, build resilience and make their special development case.

D. Knowledge management

69. Information and knowledge are key instruments for monitoring, decision-making and evaluating the implementation of the Mauritius Strategy, and all relevant organizations of the United Nations system have an important, catalytic role to play in providing, analysing and disseminating them, within their given mandates. Websites dedicated to small island developing States, such as the revitalized SIDSNet, can facilitate effective knowledge management for small island developing States and promote partnerships, networking and collaboration among the organization of the United Nations system, as well as among small island developing States and with other partners. Other island-specific pages on the websites of all relevant agencies should supplement and have links to dedicated websites so that access to the technical and policy resources of interest to small island developing States can be enhanced.

Recommendation 4

Websites dedicated to specific issues of concern to small island developing States, such as SIDSNet, should be strengthened, with the active involvement of all small island developing States and their partners, in order to effectively promote partnerships, share knowledge and expertise, accumulate the relevant data and information and facilitate networking, and should have strong links to the respective websites of small island developing States. These websites should be easily accessible and contain comprehensive information on all activities of concern to small island developing States, including updated financial information on the projects and programmes being implemented.

E. One voice

70. One of the key lessons and success stories is the way in which various United Nations entities have helped small island developing States to speak with one voice in international forums. This has helped to ensure that the priorities and concerns of these States are reflected in global and regional decisions, including in the implementation of the outcomes of United Nations conferences. At the global level, the Small Island Developing States Unit and the Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States, despite limited resources, have facilitated the articulation by small island developing States of their concerns and priorities to the extent possible, and enabled them to work together as a group. Positive examples include the support offered to the Alliance of Small Island States, and the assistance provided to the delegations of small island developing States on the occasion of United Nations meetings. Similarly, ESCAP and ECLAC have helped small island developing States in their regions to work together and speak with one voice at both the regional and global levels. UNESCO, through initiatives such as Small Islands Voice and Climate Frontlines, and other specialized agencies have also helped in this process.

Recommendation 5

Small island developing States need a strong voice at the global level. The Small Island Developing States Unit, the Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States and the regional commissions in particular play an active and catalytic role in facilitating the emergence of a collective voice which can articulate the particular concerns and priorities of small island developing States. Other United Nations agencies are encouraged to also play an increasingly important role in helping to give small island developing States a voice in international forums.

F. Roles and responsibilities

71. The Barbados Programme of Action and the Mauritius Strategy identified key roles for the United Nations system in supporting the implementation of the programme areas for the sustainable development of small island developing States. These crucial roles have been reinforced by the General Assembly in various resolutions (e.g., resolutions 59/311 and 65/2). In those resolutions, the General Assembly reiterated that, while primary responsibility for the implementation of the Barbados Programme of Action and the Mauritius Strategy rests with the small island developing States themselves, the relevant United Nations agencies have a key role, within their respective areas of expertise and mandates, in supporting and supplementing national efforts. The present analysis concludes that the United Nations system has provided support for the national implementation of the Barbados Programme of Action, ranging from the coordination of activities and funding and implementation of major projects and programmes, to the active support provided by a wide range of specialized agencies. Small island developing States, however, can play a crucial role in ensuring that United Nations agencies are able to provide targeted support for their national efforts. There are various opportunities for small island developing States to work in partnership with the agencies of the United Nations system to tailor services to their special needs and priorities. At the national level, these opportunities include, inter alia, the global support programme for national capacity self-assessments funded by GEF, the common country assessments undertaken by UNDP, and the United Nations Development Assessment Frameworks coordinated by the United Nations system. In order to fully benefit from the support of all relevant United Nations bodies, agencies, programmes and funds, these and other related processes need to be harnessed by each small island developing State.

Recommendation 6

By harnessing processes such as the national capacity self-assessment, common country assessment and the United Nations Development Assistance Framework, small island developing States and the United Nations system have various opportunities to work in close partnership. Enhanced collaboration among organizations of the United Nations system, involving also all relevant non-United Nations regional organizations, would allow small island developing States to fully benefit from the support of the United Nations system, and would help the system to better tailor its services to the special needs and priorities of these States.

G. Making a stronger case for small island developing States

72. Several agencies have been undertaking analytical work that addresses the particular vulnerabilities of small Island developing States. UNCTAD focuses its analytical work on the structural disadvantages and development needs of small island developing States, as well as on the criteria for the least developed countries, which include some small island developing States. UNDP has undertaken a study on debt sustainability. The United Nations Framework Convention on Climate Change and the World Bank have been working on, inter alia, climate change adaptation, risk assessment and insurance schemes. The Convention on Biological Diversity has addressed threats to biodiversity. A report of the Secretary-General on addressing the vulnerabilities and development needs of small island developing States, currently under collective preparation for submission to the General Assembly at its sixty-sixth session, will provide further information on these issues and on ongoing work.

Recommendation 7

Analytical work to address both the special vulnerabilities of small island developing States and to explore ways in which to help build their resilience needs to be continued by all concerned United Nations agencies in a coordinated and comprehensive manner with a view to making a stronger case in favour of small island developing States in the various climate change, economic and trade forums.
